Don't worry about that stuff. Trust me, there are way more helpful folks on AR than there are negative. Although there may be some "family squabbles" on this NG, I'd bet there's not one person on this NG who wouldn't give you their luckiest shirt right off their back if they thought it would help you in any way. I'm living proof of that as ywo of this NG's "toughies" put me on the right track wrt upgrading my ticket and refining my operating practices. You're in good company. If I can help you with anything at all, feel free to drop me an e-mail. If you want my ARRL CW CD's are yours to borrow. Welcome to a "way cool" (My niece's saying.) hobby and I wish you nothing but continued success. :-)

1356. Ham Tower Incident On TV

Newsgroup: rec.radio.amateur.policy
Date: 2002-11-20 13:23:34 UTC
From: Bert Craig <wa2si@arrl.netNOSPAM>
Message-ID: <q1MC9.30723$s02.20181@news4.srv.hcvlny.cv.net>
Source record: 55546

Did anybody catch that 'What Were They Thinking' show last night? One of the segments showed an 83 yr. old ham attempting to make adjustments to either his 3 el. tribander or his VHF crossed-yagi array. In either case, he fell over backwards and lodged his leg between the tribander boom (I think) and the tower. This left him dangling precariously at approx. 5 ft. while the local FD used the hook and ladder to effect the rescue. Moral: be super careful on towers and use a harness (I didn't see him wearing one.) or you might get hurt AND put on public display...on national TV! Poor chap. :-(On a good note, the report did say that he recovered fully and will likely still attempt to "fine tune" his antenna. (Albeit in a safer manner.)

Welcome to Amateur Radio! In the ham radio world I'm
not to far ahead of you on the "time line". I've been licensed
since 1998 and just got the code test passed this October,
with the General passed this month. Also some of the same
guys that are "anal retentive" about the Morse code helped
me with pointers on how to learn it. Those who put down
hams because of their license level in this NG are a very
vocal but very small part of Amateur Radio as a whole.
The best advice you could get at this point is just remember
there is always one person out there in life that gets their
jollies from raining on people's parades! We just seem to
have a higher than normal percentage here. Just keep on
studying that code and it will come to you, if I can do it
ANYONE can. BTW check out the ARRL website they
have the code practice audio files online for download at:
http://www.arrl.org/w1aw/morse.html they helped me a
lot in the learning of the code.

And remember he biggest problem with the grouches in
this group is they don't get enough fiber in their diet! ;^)

Thats what I have been saying DAN, the whole written testing scheme is a JOKE.
Not only did they dumb Down the Code Test, they Dumbed Down the written.
And then we have Clowns like Brian who cant pass it.

You should really try and keep up dickieboy. Show me one of my
posts were I have complained about the requirements. All I argue
with is your and newbie larry's attitude toward those whom you
think are substandard hams just because they don't hold an Extra
ticket or prefer to operate cw like you two 'superior hams' do. As
for those who do complain about the requirements keeping them from
ham radio, I agree, that is garbage, if anyone wants the ticket
then do what is necessary and get it or go find another hobby like
cb that requires nothing.
It isn't the class of license that determines a real ham, it is
the person themselves and you and newbie larry prove even an Extra
class can be a complete jackass.
>
> You have no clue to what my background is and how many NON extras I've

.

You're so hung up on your lofty status so I'm going to come right
out and say it. I think anyone who has retired from the AF with
all these skills, has a college degree, and after all these years
can only drive a bus is proving precisely how lazy and unmotivated
he is.
Even though you went from nothing to Extra in 16 months, you're
still nothing.
Now I have spent enough time on a newbie with an ego and an
attitude.

No I don't loose the argument, it is obvious that you and
dickieboy hold contempt for other hams who did not do it like you
did. You are so proud of your extra status and your cw abilities,
that you look down your nose at anyone else who chooses not to
achieve the same thing. That is the only way you can make yourself
feel good. I know it really hurts you and dickie to think it, but
a no-code ham is just as much a ham as you are, you really should
learn to deal with it.
Your and dickie are positive proof that holding an extra class
license does not make one a real ham. Being a real ham is not
dependent upon the class of license held, it is an attitude and
you and dickei have one, it is just the wrong one.

than
> when you took them, is this the new ham's fault?

No its not the new hams fault if he passes a test that was dumbed down.
But it is a problem when those same 'new hams' downgrade and badmouth
those that did indeed pass a tougher test. Not to mention the 20 wpm MORSE
both send and receive and NOT mulitple guess.

>

You can not win. There is nothing to win. What you can do is stop rubbing
salt
into the wound. Best thing is to not broach the subject at all. And ignore
those
that keep bringing it up. Just my opinion.

Correct. Like any other worthwhile venture in life, you need to prove
yourself
to your peers. Although it seems many 'new hams' dont feel this is
necessary.
In fact they come off as knowing it all right out of the gate. Thus
immediate
confrontation.

>

I am in the catagory you describe. No degree. But learned as I went along.

Managed to make a worthwhile career out of electronics and all of that was
because of Ham Radio. But I also learned to roll with the punches.

Do you think this 'problem' is unique to the present Amateur situation? Not
hardly.
I was a 14 year old boy when I first fired up on 75 AM phone. Now that was
a
education. And did I try and buck the system? No. I learned the system
and now
am at the other end of the stick.

First thing you need to do is learn something about the Amateur Radio
SERVICE.
I highly recommend you pick up a copy of "200 meters and down" from the
ARRL.
This will give you a good background in what this SERVICE is all about.

Or for a extremely good history from the beginning to now go to Google and
search
for "Wayback Machine by William Continelli, W2XOY".

>

I view the newcomers with fear. I think too many have NO IDEA of what Ham
Radio is
all about. And bring too many CBisms with them. I think some of them
actually want to
destroy ham radio.

I also view them with envy. They are at a point in their lives that they
have a tremendous
oppurtunity to advance the state of the art. I wish I would have had the
same chance.

I view them with pity at times. Knowing that you can not go back in time.
And wondering if
in the name of progress any of the good things will remain. Such as hams
helping hams. Feeling
to be part of a large group of decent people. Having the respect of your
community. And be
willing and able to help your country when needed.

And you thought Ham Radio was just a giant CB eh?

Again Jackie...welcome and hang on. You are in for the ride of your life.

Going by experience....he probably got tired of waiting for help from;

A. His kids
B. His ham buds
C. His local club

So he did it himself with near tragic results.

Dan/W4NTI

I see you have met newbie larry and dickieboy and a few others.

Now you are putting them on the spot. According to them you will
never attain the status they have as you did not have to 'do it
like they did'.

But according to some, you're not a 'real ham'. A no-code just
can't be a 'real ham'.

In spite of what newbie Larry, who has only been licensed some 20
years, and I don't know about dickieboy, he may not have been
licensed even that long, believe about me or anyone else, but I
have been licensed for over 40 years, and I think you are and will
be a credit to ham radio. You posting shows you have the right
attitude and will not put your emphasis on some status rating as
larry and dicieboy do. You are already more of a ham than they can
ever hope to be.

> What is your advice, what makes you most happy about the

Don't base anything on how newcomers are viewed by the
cross-section of hams based on how newbie larry and dickieboy and
some others on this forum view newcomers. They are the extreme
minority who hold such disdain for those lesser class licensees.

Welcome to ham radio, fortunately you will meet many very nice
folks in ham radio, but you also have to accept that you will meet
the minority elitist as well.

1375. News Release: "No Written International" Founded.

Newsgroup: rec.radio.amateur.policy
Date: 2002-11-20 17:29:30 UTC
From: David Stinson <arc5@ix.netcom.com>
Message-ID: <3DDBC67A.4B406765@ix.netcom.com>
Source record: 55559

News Release:
"No-Written International" Founded.

11 November 2002, Coordinated Press:
Following the outstanding successes of "No-Code International,"
a group of progressive amateurs has incorporated
"No-Written International," a society dedicated to removing
antiquated written exams as an obstacle to an Amateur Radio license.

"Written testing is an antiquated, obsolete system used to
limit access to this hobby to an electronically gifted elite,"
said David Heilter, first president of NWI.
"The amateur airwaves belong to the public. It's past time that we
improved entrance standards, the same way standards have been
'improved' in the American education system. Written exams
oppress the electronic- and regulation- challenged in our
society. They are a throw-back to a time when work, determination
and accomplishment were the standards. We need to leave these
outdated notions behind and move toward a more equal system."

The ARRL responded with "Hey- Would you like a full page ad to
drum up members? We'll give ya 10% off. Such a deal!"
Officials of No-Code International could not be reached for comment.

Welcome.

I too am a new ham as of August. I went straight to General. One thing I have found is the attitude on the web - (newsgroups, qrz etc.) does NOT match the attitudes of the people I have talked to on the air. Do not use these newsgroups as an indicator. Find yourself a local club.

I have had a fascination with electronics and radio since I was a very young child. The code was my stumbling block for many years. I didn't want to go for the Novice license back in the day, as it was not renewable back then, and I feared not getting up to 13 wpm, and it ending.

The restructuring of code is what finally pushed me to get my license. I want to be able to tinker, and the HF bands have always seemed to be the place to experiment.

The local club has been very supportive, and have encouraged me to go for the Extra, and they have also encouraged several of the techs to go for the General. Most of the encouragement has come from hams in the club who have been licensed 20+ years and are old enough to be my Grandfather!

The program I used to finally learn code was from Ray Goff, G4FON. It uses the Koch method, which worked well for me. I work at least 50 hours a week, and have three kids at home, all wanting time. I installed it on my computer at work, and studied 20 minutes a day on my lunch hour. I set the program for 15 wpm with half speed (effective 7.5). This gave me an edge over the 5 wpm test speed. I took me about four weeks to get through all the characters, and about two weeks worth of practicing after that to feel comfortable. I passed the test on my first try (outside of my nerves, the test turned out to be easy). You can download the program from http://www.g4fon.co.uk/

The Armenian judges gave it a 9.8 on the Olympic Troll-O-Meter,
but they were over-ruled by the umpires in instant replay, who
award it a 2.6

The Armenian judges lodged a formal protest!

It was sufficiently trollish, of course, but way too obvious.
It was poorly written, poorly executed, and was so incredibly
lame as to lack the true drawing power of a really masterful
troll. Maybe as high as a 3.3 for the sheer stupidity of the
premise, but a 9.8? Never! The Armenian judges tear their
hair out, throw their balalaikas down in dismay, and perform
the traditional Armenian Dismay Chant and Pout! They
demand a recount!

Regards,

Hans, K0HB

Jackie,

All I can say is don't let the old frumpy, grumpy sourpusses stop you from taking advantage of what
the licenses of the 21 century give you. That "king on the hill" syndrome has been going on forever.
When they ran out of "W" calls and issued WA and WB calls, the old farts made fun of that. When
the "K" calls came along (not necessarily in the order presented), the old frumps sniffed and HAR-
UMPHED about that.

What it REALLY is about is C H A N G E. Old geezers don't like things to change; they would rather they bring back 1950 Buicks and Collins 32V2s. It reminds them that they are fast becoming
irrelevant. Hey, I'm 54 and becoming irrelevant, too! But I have determined certain things that will
keep me from ever becoming an old grumpy Gus. I refuse to drive staid 4-door sedans and stop in
the road to make a right turn into a driveway. I will NOT wear fedora hats or duster/golf caps and
poke slowly down the road oblivious to those who are behind me. I keep a keen sense of humor,
even on the corny, but clean, side. I'd rather be roller skating than reading the paper. And I LOVE
the new rigs and technology that are on the market.

What you are hearing is more the moanings of old, bald men who cannot stand for things to be different. "Why, back in 1956, we did it this h'yar way, and I don't see no reason to change it".
You will find that, not only in ham radio, but on the job where old buzzards have held forth since
the company started and grump and grouse about anything new.

Don't let 'em get to you. Enjoy your hobby and snicker at them behind their backs!
73

Jackie,

First, you have to realize that rrap has almost NOTHING to do with real
amateur radio, and doesn't reflect in the slightest what REALLY goes on in
the hobby.

Second, you are not responsible for what entry qualifications exist when you
took the test.

Just jump in and enjoy. Fortunately, in this area we're blessed with a
great support structure of clubs for almost every interest, so you don't
need to use rrap as a resource!

Welcome to Ham Radio, Jackie. You're on the right path to lurk and
learn. But don't hold off too long.

Join a club, and if you like, join the ARRL.

<some snippage>
>

Let me make note of something here, Jackie. Your stumbling onto this
group is not the best thing that happened to you at this stage of your
hobby. rrap is pretty raw and at times downright ugly.

That being said, I have a few comments about the testing process:

1. The tickets are a license to learn, not an end in themselves. That
some here believe that the tests are dumbed down, that's too bad. I've
seen what the older tests contain, and they are also not all that
technically challenging. Then again, what is not technically challenging
for me might be very much so for others.

2. For me, the Morse code part ot the testing process was very
difficult indeed. Some here hold me as a dumbed down ham for that.

3. I've been in Electronics for almost 30 years now, mostly audio and
digital, I'm getting my feet wet in RF now. The testing does not make
the Ham - the Ham makes the ham.

> If we neophytes decide that we want to get a ticket, we are told we need to

> restructuring in the first place.

My read on this is that people gain experience and knowledge as time
goes on. They might *remember* their test as more difficult. But they
forget that everyone starts out completely ignorant of the material.

Besides, I don't care what you did on the test. It's what you do after
becoming a ham that is of interest.

> At the time I took the Tech test, I had no knowledge that the previous
> entry-level exams for an amateur radio license were so much harder than the

> my license, just to prove that I could pass such an exam, it wouldn't be
> given to me now... so why should it matter?

It doesn't matter at all. We return to what the tests accomplish and
what they are for.

The ham needs to know enough safety related material so that they don't
harm themselves or others.

The ham needs to know proper operations procedures, so that they do not
transmit out of band or interfere with other amateurs or services.

You learned this in studying for and passing your technician exam. You
did what was asked and required.

> I decided to try amateur radio because some of my friends were into it, and

> because we will take "dumbed-down" upgrade exams, too. How can we win?

Like I noted before, you found this newsgroup waaaay too early in your hobby. I could see us scaring a person completely away from the hobby.

<some more snippage>

> driving after a 6-hour behind the wheel course?). In fact, the little bit of
> theory I learned while studying for the Tech test got me interested enough
> in electronics that I went and bought a SW receiver kit, just so I could
> learn how to put together a radio from scratch.

Now your talking. I am firmly convinced that amateurs should do as much homebrewing as possible. Good job!

Seriously, I think homebrewing is more important than most other aspects of the ARS.

> Many of my ham friends have serious backgrounds in electronics, computers
> and a variety of engineering fields. But not all of us hams have degrees in
> any of these subjects (or even a degree at all) so we will have to learn the
> technical theory on the upgrade exams without the benefit of any previous
> educational background.

But you will have the advantage of really "loving the learning" as you are doing it for just that reason, loving to learn.

Even if we upgrade to General or "nickel Extra" in
> the future, what control do we new folks now have over present licensing

Once upon I time, I started a thread here about comparing the new tests to the old. No significant difference. The main difference was that the technology changed, so did the questions.

> This group seems to see a lot of postings on the CW requirements (yeah, I
> know, duh). As I said, I'm not taking a stand one way or another on CW right

First not all of us have contempt for the present testing. I support CW testing because I think it is an important part of the whole ham experience. But I won't lose any sleep when it goes away.

CW proficiency does not make you a better ham, it only makes you better at CW.

> I would like to know what you established amateurs think about the newcomers

Now we have to undo some of the damage done by your finding this group. 8^)

With one or two notable exceptions, everyone here is an okay person. If you were to QSO with them on the air, you would probably think "what a bunch of nice guys! But here in the newsgroup, we let fly with the opinions, and some of those opinions are strong indeed. but we run a complete spectrum of opinions, from vehemently anti-code to vehemently pro-code. As in any other group, it is best to throw away the fringe and listen to the middle.

So now that you are here, type up a storm, and give us a "new hams" perspective. Have fun, the ARS is a great hobby, and remember, rrap is just one of the rough neighborhoods in it

There are many QRP transceiver kits and designs out there, ranging
from very simple to quite complex. Oddly enough, almost all of them
are cw or digital, and were/are designed by long-time Extras with 2x1
or 1x2 callsigns...;-)

One really exciting thing about the QRP folks is how common the design
and construction of complete, functional rigs has become among them.
Somebody gets an idea and turns it into a working rig, then puts it on
the air and makes contacts. I recall one ham who participated in FD a
few years back by sitting down at the bench at starting time. He then
proceeded to designing a new QRP rig, build it, and make FD contacts.
Had a fairly respectable score, too.
>

> N2EY, any comments and/or tips you might have would be greatly appreciated.

The Rock Mite is an amazing bit of work, but it's a VERY limited rig.
Output is 10 dB down from typical 5W QRP, and there are only two QRG
available. Not a general purpose QRP CW rig at all, but looks like a
bit of fun and only one evening to build (if that).

As a practice project, you might consider one of the SW+ series.
Although more expensive and complex, power output is 2.5 W and they
are tunable. All the Elecraft (note spelling) and most other QRP
designs require toroid winding, so you might consider a "build
practice" kit that includes toroid winding. Just a consideration.

The K2 is not that difficult to build if one has some soldering and
assembly skills, the right tools, and patience. Building mine was much
easier and faster than designing and building my homebrew rigs from
scratch, but still a bit of a challenge and a learning experience. One
real budget-saver is the fact that you can buy and build a "bare" K2,
then add the various options later.

Do you read the Elecraft reflector?

> I'll be sending an e-mail in support of the new rig for the ARS. Take care,
> Dick and Jim. :-)

Me too..

And keep practicing with that key!

73 de Jim, N2EY

The general test I took in 1961 was eons ahead of the present Extra. Hard to believe but that explains a lot of what I hear on the air.

Dan/W4NTI

Good luck and keep at it. There are lots of online resources to help
you learn code, such as N0HFF's book on the subject and G4FON's
software (just two examples). Most is free for the download.
>

> licensing exams.

I don't think anyone is necessarily "inferior" simply because of the
changes in testing. But the level of knowledge and skill necessary to
pass the tests for the various US ARS licenses has dropped over the
past several decades. Most of this has come about because of the FCC's
desire/need to save money, not because of anyhting hams have done.

>I'd like to ask the folks that feel this way one
> non-rhetorical question. If you really believe that new hams are inferior to

> the established ones as a result of today's tests being less difficult than
> when you took them, is this the new ham's fault?

Of course not! But at the same time, a reduction in test standards and
method means those who pass said test will, on average, be less
qualified unless they have learned more than the test requires.
>

Not that it matters, either.

The important point is this: What really matters about a ham license
is what the holder does with it after it's earned.
>

Simple - just enjoy the parts of the ARS experience that you find to
be fun and ignore the naysayers.
>
> I really hope that the majority of long-time radio amateurs don't believe
> that we newly-licensed radio amateurs are inferior just because the tests we
> took to get our tickets may not have been as hard as the ones they took.

Most don't feel that way, from what I've seen. But you can certainly
understand that folks will argue over the requirements. Opinions range
from "let's have one class of license and make it really easy to get"
to "we need lots MORE license classes, tests and qualifications".
Somewhere in the middle is the system we've got.
>

> Personally, I believe the proof of an operator's skill is shown through
> actual on-air practice, and not necessarily from what you had to digest to
> pass a test.

I agree 100%. The license test does, however, indicate that a certain
minimum level of knowledge/skill was met at the time of the test.

> There is *always* the opportunity to continue our skills and

Many of us wound up becoming engineers because ham radio led us that
way. Me, for instance...

> Even if we upgrade to General or "nickel Extra" in
> the future, what control do we new folks now have over present licensing
> requirements?

You can send comments to the FCC, same as any other interested party.
FCC makes it easy to submit comments online, too. Whenever a change is
proposed, you can let your voice be heard.

> While I have no idea what the, say, 1965 entry-level exams

> teach me what's great about this hobby? I would really like to learn!

One great thing is that there is so much to do. Some of it is easy,
while other stuff requires an investment of time and effort. For me,
the main attractions are communicating in a mode that is unique (CW)

on the air, and building/operating radio equipment - including rigs I
have designed myself.

There are some folks who use the ARS as a way of venting their
negativism, but they are relatively few. Noisy, though.
>
> I am (presently) a No-Code Technician.

No, you're a Technician. At least that's what it says on every
Technician license I've ever seen. ;-)

Jackie, welcome to amateur radio! You ARE a ham, period. I think it is more important to get in and start enjoying rather than waiting for the code test. Sometimes even older folks can change their mind - I was not particularly in favor of the various contests (are there any weekends set aside for NO contesting?), but one of the folks in this group mentioned this was a lot of fun for the newer licensees - and I changed my thinking quite a bit. 180 degrees, in fact.

If you lurk long enough, you find a lot of the friction is over the code thing. Don't worry, everyone will get over it. The big thing is to **enjoy**. You might even check into Echo Link (yes, there is an argument over whether or not this is amateur radio - so what?). You can use your computer to connect to repeaters all over the world and talk to folks that are mobile, using an HT, or even using a base station. I've got Echo Link on my PC - it's just another facet of amateur radio. I don't have a link handy, but you can use any search engine and get a copy of the free program. The instructions will be with it. You must have a valid amateur radio license to use it (they check) - and you DO have a valid license!

Just be thankful you don't have the hang-ups that some of the guys in here have (I'm tired of the old threads about Kim's callsign as well as the constant CW vs. no CW) - just enjoy and let the old codgers that have a hang-up just take a few more blood pressure pills ;-)

Welcome to amateur radio & 73 from Rochester, NY

Dan, I agree. My copy (having not copied Morse code between 1969 and 1993) was not 100% when I retested in 1993. I did, however, write a program that sent and received Morse code and did not want to debug it at 15 or 20 words per minute. Whew, what an hour's worth of debugging at 35 will do for your Morse. Besides, I did pass the 20 in 1966 as well as a commercial telegraph ticket back then. And copied 40 words per minute on paper for a good 5 minutes with NO errors for the Navy in 1967. Can I gripe? ;-)

This thread is interesting, no? Dang it, anyone with an amateur license IS a ham. Period.

What I mean is that Mr. Anderson has repeatedly demonstrated that he
does not engage in civil, well-mannered discussion in this newsgroup
with those who disagree with him.

And you didn't answer my question, Dave - why do you (or anyone)
respond to Mr. Anderson, given the many examples of how he behaves in
the face of a differing opinion?
>
> > >7037 CW 9 PM EST Wednesdays

> Maybe you didn't get the word. Amateur radio is open to all and even
> the unlicensed may listen.

It should be clear from his comments that Mr. Anderson is against
radio amateurs' actually using the amateur radio bands to discuss
amateur radio issues - even though such discussion is clearly within
FCC and ITU rules.
In other words, he wants to be the censor - or radio cop of a service
he
does not participate in. Why should anyone take him seriously?

Almost all of the unlicensed may become licensed by following the established procedures.

> For some of the unlicensed, listening would be a new experience.

Exactly.

73 de Jim, N2EY

Don't forget, 7037 CW 9 PM EST Wednesdays. All are invited.

Step 1: No more automatic renewals. Individuals must retest and
pass all elements required for their license class.

Step 2: The passing score for written exams needs to be raised to 90%.

Step 3: Code elements should be 13 wpm for General, and 20 wpm for Extra.

Step 4: Make the no-code license one year non-renewable.

Step 5: Cancel your league membership until they decide to work
to improve things.

Step 6: Complain to the ARRL when-ever you hear an idiot on the air.

Step 7: Turn in rule breakers to the FCC.

True, but I found myself at sea when we had an SOS on 500 KHz. The idiots at NPN, NPO, and others were calling virtually on his frequency. What a mess. Then there was the time propagation stopped (too close for HF) and we switched to VLF. A lot of interesting things I learned in the US Navy too (actually applied from previous learning). Then there was a typhoon that knocked out the coast guard station on Saipan, but that's a story for Hans to tell ...

Propagation you learn in a hurry without contests. Whilst the higher power stations fought at night on 75 to talk down the Eastern seaboard, I was using 25 watts on 160 to talk across the US. Heck, I used to ragchew with Norm, VK2NP, for hours on end using teletype. Lots of phone patches. 9:30 AM to around 10:30 AM on Guam back to the states using 10 meters - 20 meters later in the day.

As far as band conditions - I had a ball working novices on the Eastern seaboard of the US from Guam. You didn't need a contest to give you fun. They were limited to 75 watts, crystal control, back then. Yes, one used 500 Hz (or less) filters on them. BTW, more interesting was if your radio DIDN'T have all those fancy features ...
Back in the 60s, I was using a Halliscratchers S-20R, probably one of the WORST receivers I've ever used.

Curious if anyone knows what the current 160 meter band plan is these days ? 10-15 years ago stateside CW activity occupied 1800-1820 or therabouts and the DX window was around 1825 as I recall. Having just put a new 160 inverted el up I have yet to hear anything down in the very low end of the band and all the cw activity seems to be from 1820 and up and the dx spots I see are up around 1830-1835. What gives ? Can anyone shed some light ?

Thank you Jim. CW is important to me. But maybe not to others. I have no problem with that. I just am sick and tired of hearing those that did do it are some kind of a goof or something.

As far as Im concerned there are plenty of CW ops around to last me the rest of my life. But more are ALWAYS welcome.

In some parts of the radio spectrum I think its already made it.

BUT.....I don't see anyone stepping in to correct a new comers mistakes...on the air. So whose fault is it really?

When I was initiating my on the air experience I was corrected, it seemed on a daily basis. I didnt' get my hackles up, I payed attention. Perhaps we need some more of that...eh?

I agree the S-20R is not much of a receiver. I've got one here piled somewhere. No one said you needed a contest to learn about propagation. But it certainly can educate one if he pays attention.

My ham radio background helped me quite a bit while in the military. Not the CW per se...but the knowledge I had picked up just by being a ham.

Its a mess...go to the ARRL page and look around for it. Lots of changes since 15 years back.

CW is 'safe' below about 1830. The bottom ten is digital now a days.

Just remember, that the "ARRL" band plan, does not carry any "protection" of
law/rules.
The FCC is reluctant to rule any "band plan" on any amatuer band.

Hans has his meter protected with an input resistor and a couple of schottky diodes across it. You need about 600 volts into it to register 10 over.

We probably shouldn't, and I usually don't. I was drug into the fray by his interjection with more of the anti-Morse posts in reply to one of mine on the subject of CW radiosport. It was off topic, and well, suggestions that I get psychological help and that I should leave the group because I believe in good manners just begged for a retort on my part, no?

And,....well,... you have gotten into a few donnybrooks with the lad too IIRC! 8^)

Well, then it isn't any work off the callsign, but have all the fun you want. My nickname most of my life has been Booby. Well, I say most of my life...I mean from school to now and mostly only with old school friends.

I don't know that I'm "proud" of my tits. For goodness sake, we women are not like you men. For instance, if you're typical...you're boastfulness and assholiness indicates quite a small dick. You'd have the problem with that and are probably making up for what you perceive as a shortcoming (no pun intended).

However, as I've said many times here and elsewhere...big boobs are a fact of life for me and I may as well have fun with it.

Source record: 55762

Hello,

I've introduced a few people to amateur radio. I don't go out and pitch for it, I bring it up if the person may be interested. Last week, I let someone borrow a copy of my ARRL Handbook. He will see the introductory chapter about Ham Radio and possibly join.

I would like to let you know that you do not have to learn Morse code, just because of the "shaming by established amateurs". Actually these very same "amateurs" should be ashamed that they are for tying a higher license class to learning Morse Code (You must learn Morse Code to go above lowest license class). Then, they denigrate the lowest license class by calling it a "Technician". In reality, some may know more about the material than Extras, but they are at the lowest license class because they cant/wont learn Morse code. This tends to misrepresent Ham Radio's correlation between license class and actual ability.

Amateur radio can be so much more than just learning Morse code. It can involve Radio Direction Finding, homebrewing (designing circuits, not beer), (non-CW) kit building, troubleshooting, antenna setups, etc. You mentioned you would like to learn more about the hobby. Those that tend to advocate and or/teach Morse code don't seem to want to do the other activities. Don't limit yourself to Morse Code. . I proposed the idea of an "Amateur Radio Experimenter's Club".

Also, don't waste your time with contesting. Contesting is finding as many stations as you can, calling CQ, and then logging it in. It gets boring after the first few contacts. Doing the same boring thing over and over again can be boring.

If you are looking for Amateur Radio, you will not likely find this in the Ham Radio clubs or in the CB hobby. If you want to "Ham", contest, Morse Code, build antennas, learn about appliance operation, brag about propagation conditions, use strange keywords, and part of the "Ham" culture, than Ham Radio and/or CB radio is for you. If you want to be much more, it is up to you to bring up at meetings the more interesting activities.

Sincerely,
vshah

Much as I dislike some of the current state of things in amateur radio, we live in the 2000's not the 1950's. We have to deal with the current reality, bad as it might be. Returning to 1952 is not going to cure the problem. We need to pull together as hams and do things without bugging the FCC for everything. We used to do that.

>> News Release:
>> "No-Written International" Founded.
Interesting concept.

>> "No-Written International," a society dedicated to removing
>> antiquated written exams as an obstacle to an Amateur Radio license.
Except you are wrong. ANYONE can take an 8 hour licence class and pass the exam easily in the same day. So, its hardly an obstacle.

> It's past time that we
>> improved entrance standards, the same way standards have been
>> 'improved' in the American education system.
To improve standards, make the test harder and don't tie code to the licence classes. You just helped my argument. Lets add RELAVANT standards. Not false, feel good, "accomplishments" like Morse code to tell us we accomplished something.

Why not just drop the archaic code requirement, beef up the theory
requirements and get hundreds of new, excited members tomorrow? That'll be
the biggest shot in the arm the hobby has seen in decades.

Nothing like talking out of both sides of your mouth. First you
make it known just how little you think of no-coders then you spin
this stuff.

Lets take a look at some of the things you and newbie larry have
said about those of 'lesser rank' than you and see just how you
really feel about Jackie and his no-code ticket.

:From: Richard Carroll (w0ex@scan.missouri.org)
:Subject: Re: No code = No ham.
:Newsgroups: rec.radio.amateur.policy
:Date: 1997/12/22

:Mark VandeWettering wrote:

:> --
:>

:No problem, there's plenty of turkeys among the No-Coders

:From: Dick Carroll (dixie@townsqr.com)
: Subject: Re: Want to Make Wa8ulxA Cry?
: Newsgroups: rec.radio.amateur.policy
:Date: 1999/08/17

:I stand by ALL I said. IF the day should come- and
:the 10 year expiration will take care of this pretty well-
:that no-code techs are a majority of ham radio operators the
:hobby is finished. No entity can stand when it it populated
:with all beginners who met no real qualifications.

There you go, all you no-code techs are going to finish off ham
radio, dickie said it himself.

:From: Dick Carroll (dixie@townsqr.com)
:Subject: Re: Smarting-Up

:Newsgroups: rec.radio.amateur.policy
:Date: 1999/04/06
:Enough of those people will convert the ARS into a
:CB/Freeband/PCS and through their sheer numbers push out the
:serious ham radio users.

And your just going to turn the ham bands into cb.

:From: Dick Carroll (dixie@townsqr.com)
: Subject: Re: Hello Bob Wexelbaum
: Newsgroups: rec.radio.amateur.policy
: Date: 1999/04/30
:-as asserted by all the dodo no-coders posting here-

:One central fact that I learned early on RRAP was simply
:that No-Coders aren't about to learn anything. If they were,
:they wouldn't be no-coders! They've got more excuses, dodges
:and "not to" than reason could ever counter. The harsh
:words they don't use themselves are provoked by them and
:their pugnacious actions. It should be no surprise that
:responses should meet or exceed them.

See Jackie, even though dickie pretends to welcome you to ham
radio he
knows that since you went for the no-code ticked you are just to
lazy
to ever learn anything otherwise as he says, you wouldn't be a
no-coder.

: Amateur Radio, RIP. Alas, we hardly knew ye. And the
:no-coders barely did at all.....
:Dick C

And again he claims the no-code ticket holders are going to bury
ham
radio. Make you feel good he thinks of you that way?

And now some of Larry's whining

:From: Larry Roll K3LT (yodoc@aol.comnospam)
: Subject: Being Extra is no Longer Rare! (Don't look now, but it
never was!)
: Newsgroups: rec.radio.amateur.policy
: Date: 2000/07/03 Precisely. We gave the no-coders 99.97% of the
amateur radio
:spectrum in 1991, and they proceeded to pick up their microphones
:on the 2-meter band and start whining about not being able to
:pick up their microphones on HF and whine there!

Again, just because you hold an no-code ticket and possibably
content with the terms of your license, according to newbie
larry you are just a lazy no good for nothing will never be a real
ham.

:From: Larry Roll K3LT (yodoc@aol.comnospam)
: Subject: Re: Puke.
: Newsgroups: rec.radio.amateur.policy
: Date: 2001-06-02 23:19:04 PST
:I don't recall having done so other than to treat you the same
way
:I treat *all* "no-coders."

As in I treat all no-coders with total disgust.

:From: Larry Roll K3LT (yodoc@aol.comnospam)
: Subject: Re: Isn't this interesting?
: Newsgroups: rec.radio.amateur.policy
: Date: 2000/08/07
:BTW -- every time I take a stool
:softener, out comes a bunch of Liberal Democrat members
:of the Clinton Administration -- and some no-coders! However,
:I believe the first situation will clear up this November! Then
all I'll
:have to flush down are the no-coders!

If you didn't get your bowels so upset about some no-code ham
being just as
good a ham as you, you wouldn't need that stool softner newbie
larryboy.

More of newbie larry's disdane for the no-code ticket holders.

:From: Larry Roll K3LT (yodoc@aol.comnospam)
: Subject: Re: Place Vote:How Many Hams use Single Banded 10 Meter
rigs.
: Newsgroups: rec.radio.amateur.policy
: Date: 2001-08-26 08:50:16 PST
:Single-band 10m rigs seem to me to be geared to two groups --
:terminally microphone-obsessed No-Coders who can't conceive of
:needing to use any other band and any mode other than SSB/FM
:voice, and CB'ers looking for a higher power (usually 25 - 100w.)
:easily-modified rig that they can use to "bootleg" on 11m. I am
a
:Real Ham who regularly uses CW and digital modes and little or
:no voice; therefore a single-band rig has limitations which would
:not appeal to me.

So, according to newbie larry, if you don't use cw and digital
modes
then you can't possibly be a 'real ham'.

:From: Larry Roll K3LT (yodoc@aol.comnospam)
: Subject: Re: TO THE IDIOT THAT POSTED THAT HE WAS UPGRADING TO
GENERAL THIS
: WEEK
: Newsgroups: rec.radio.amateur.policy
: Date: 2000-08-23 20:35:50 PST

:I think we can pretty much draw the conclusion that the main
problem
:the no-coders have, or had, with the code tests was their own
laziness,
:lack of motivation, and perhaps, fear of failure.

As a no-code ticker holder you are just too lazy and have no
motivation
to do any better, according to newbie larry that is. Isn't it nice
to
have such encouragement from a fellow ham?

:From: Larry Roll K3LT (yodoc@aol.comnospam)
: Subject: Re: This should choke a few big mouths
: Newsgroups: rec.radio.amateur.policy
: Date: 2000/06/21
:The way hams these days tend to fall all over themselves when
someone
:shows up at a club meeting with a brand-new No-code Tech ticket,
a
:new HT, and no clue as to which direction the paper should move
when
:they open up the instruction manual, is what puzzles me.

:From: Larry Roll K3LT (yodoc@aol.comnospam)
: Subject: Re: An Invitation to CW Radiosport
: Newsgroups: rec.radio.amateur.policy
: Date: 2002-11-16 09:26:29 PST
:That's the problem with you no-coders. You know nothing about CW
because
:you have had no practical experience in using it at a useful
proficiency
:level, therefore you tend to disbelieve it's potential. It all
boils down to
:two things -- laziness and whining.

:From: Larry Roll K3LT (yodoc@aol.comnospam)
: Subject: Re: NO_CODE = NO_HAM.
: Newsgroups: rec.radio.amateur.policy
: Date: 2002-07-21 08:09:10 PST
:Good. I'm impressed. Not got CW? Bzzzzzt! You're inferior to
me
:as a ham! You lose!

There is that inferior/superior attitude again, see you holders of
a
no-code ticket are, according to newbie larry, painfully inferior
to
the big man with the extra ticket who can beep.

:From: Larry Roll K3LT (yodoc@aol.comnospam)
: Subject: Re: Morse Character spacing

: Newsgroups: rec.radio.amateur.policy
: Date: 2000/07/22
:Actually, I took all my "real ham" tests between the years 1981 -
1983.

So if you weren't licensed in those years like newbie larry, then
you cannot be a 'real ham'.

Yet below newbie larry says you don't even have to have a ham
license to be a 'real ham'

:From: Larry Roll K3LT (yodoc@aol.comnospam)
: Subject: Re: What's a "Real Ham?" REAL EASY... K3LT's reply
(long)
: Newsgroups: rec.radio.amateur.policy
: Date: 2001-05-13 10:48:52 PST
:A Real Ham is a person who makes something of himself *as* a
:radio amateur. A Real Ham can even be someone who doesn't
:possess a license --

And then here he says:

:From: Larry Roll K3LT (yodoc@aol.comnospam)
: Subject: Re: The Future of Packet Radio
: Newsgroups: rec.radio.amateur.policy
: Date: 2002-11-10 09:18:43 PST
:There are no more Real Ham(tm) licenses. Only dumbed-down,
slow-code,
:fake Ham Wannabe licenses. The last Real Ham(tm) (General or
above)
:was licensed on April 14, 2000.

Make up your mind, which is it? According to him if you were
licensed
after April 14, 2000, then you are not and cannot be a 'real ham'.
Notice his (tm) after Real Ham, he claims he inventerd the term on
Fidonet some 10 years ago. Like no one had ever used the term
before
he did, yea right. Guess he also helped Gore invent the Internet.
Would
stand to reason they would be good buddies.

:From: Larry Roll K3LT (yodoc@aol.comnospam)
: Subject: Re: NO_CODE = NO_HAM.
: Newsgroups: rec.radio.amateur.policy
: Date: 2002-07-21 08:09:10 PST
:No, I don't. I'll call myself a Real Ham based on my own
assessment
:of what makes a Real Ham -- which includes, as a prerequisite, a
:minimum of 13 WPM code proficiency and the ability to operate CW
:comfortably and competently on-the-air -- sending by hand and
:receiving by ear and copying in writing.

So as a no-coder or even an upgrade with the 5 wpm code test,
according to newbie larry's standards you are not a 'real ham'.
Larry even referred to my Advance class ticket as a 'piddling
little Advanced class ticket'.
See newbie larry thinks if you don't hold an extra like him and
operate cw then you are a nobody. However,
Jackie, even if you do get your extra class someday, you can never
reach the lofty heights as newbie larry and
dickie becasue you can get the extra with only a 5wpm code test,
so you can never acheive the lofty status
of being a 'real ham', at least according to them.
And then we hear from the all knowing wa8ulx:

:Subject: Re: How can we win?
:Date: 20 Nov 2002 19:51:38 GMT
:From: wa8ulx@aol.com (WA8ULX)
:Organization: AOL http://www.aol.com
:Newsgroups: rec.radio.amateur.policy
: References:1

:>A no-code just
:>can't be a 'real ham'.

:And they never will be, nothing more than a CBplusser

And wa8lux's bio from qrz.com June 10, 2001 which he has evidently
deleted since then, even though it still expresses his true
feelings.

:WA8ULX Lookups: 82
:BRUCE A. BEYNON
:804 W 12TH AVE
:COVINGTON LA 70433
:USA
:Detailed info Update this listing Update Policy...

:Mailing Label Postcard

:Email: WA8ULX@AOL.COM

:One of the only Real Hams left, most of the new ones are
CBplussers

So again we see the disdain for the other class of hams, you just
simply
are not 'real hams' by the definitation of a very few minority
bloated ego status eekers here (by the way Brucie, did you get
newbie larry's permission to use the term 'Real Hams' as he has
it trade marked?).

So Jackie, don't worry about all the nonsense spouted by these few
minority egos, you are already more of a ham than these knot heads
will ever be.

JJ:

You're perfectly welcome to do my job for a month and then tell
me, to my face, how lazy and unmotivated I am. I'm not just a
bus driver, I drive a Paratransit bus, which means I transport
physically and mentally challenged people exclusively, providing
door-to-door service over a county-wide area. Not only do I have
to know where virtually every doctor's office, medical center,
hospital, business, nursing home, and school in the county is,
but I have to be able to find the homes of a large and changing
clientele, and do it quickly and accurately. I do more map reading
and basic road navigation in one day than most people do in
a year. I have to safely maneuver a vehicle that is 25 feet long,
7.5 feet wide, and 10 feet high in crowded parking lots and narrow
city streets. I have to deal with loading and unloading barely
ambulatory and wheelchair-bound passengers up to 25 times
a day. I have to be in constant communication with my dispatch
center, and deal with frequent changes to my working manifest.
It is an essential service and our clientele depends on us to
provide safe, efficient transportation in order for them to live
relatively normal lives in spite of their individual challenges.
It is a job I enjoy and which gives me a great deal of satisfaction.
So, go ahead and make fun of my job. I get a laugh out of it
myself on a regular basis!

Ah, yes... but I guess that is kind of why I have lurked here for some time now... Usenet groups are well-known for their bombastic arguments and strongly-held opinions ... now and then, I glean some wisdom from both sides of an argument just by reading both sides of an argument, then trying to look past the ad hominems to figure out where the posters are coming from. But I know how to use my killfile and the truly offensive posters with nothing to say other than insults will go into it.

> That being said, I have a few comments about the testing process:
>
> 1. The tickets are a license to learn, not an end in themselves.

Agreed totally. I learned quite a bit from studying for the Technician test... I learned something about electronics, antennas and how signals are propagated, none of which I knew beforehand.

> 2. For me, the Morse code part ot the testing process was very
> difficult indeed. Some here hold me as a dumbed down ham for that.

I haven't been able to devote daily practice to CW yet, but it appears that I'm learning it pretty quickly thus far. I guess if I'm going to go through the trouble of learning it, I may as well learn it well enough to use it. I would like a Vibroplex keyer on my desk because I think that "Bug" is kinda cool-looking, too. :)

> The ham needs to know proper operations procedures, so that they do not
> transmit out of band or interfere with other amateurs or services.

I jammed those band plans into my noodle first thing! Ooh, "jammed" isn't the best word to use in this instance, I guess.

> Like I noted before, you found this newsgroup waaaay too early in your
> hobby. I could see us scaring a person completely away from the hobby.

Nahh. I heard about the "Great CW Wars" from some ham friends who've been through them. Everyone's got an opinion and some just bandy theirs about more vociferously than others.

> Now your talking. I am firmly convinced that amateurs should do as much
> homebrewing as possible. Good job!

It is really cool to finally know what all those little electronic parts are for!

> Once upon I time, I started a thread here about comparing the new tests
> to the old. No significant difference. The main difference was that the
> technology changed, so did the questions.

Yeah, quite so, I would imagine. There is PSK-31 (did I get that right?), packet and other digital modes out there now that weren't there all those years ago. I don't think that one mode replaces another, it is nice that we are able to pick and choose at length which mode we want to use and when.

> First not all of us have contempt for the present testing. I support CW
> testing because I think it is an important part of the whole ham
> experience. But I won't lose any sleep when it goes away.

I'd like to try and use it when I get that part of my upgrade, just to see if I can. If I find out I don't like it, there are lots of other ways of communicating.

> CW proficiency does not make you a better ham, it only makes you better
> at CW.

I guess the same could be said of any mode one utilizes.

> Now we have to undo some of the damage done by your finding this group.
8^)
>
> With one or two notable exceptions, everyone here is an okay person.

I think I've got one of the "notable exceptions" killfiled- without mentioning names or callsigns. No sense of wasting time reading personal insults.

> you were to QSO with them on the air, you would probably think "what a
> bunch of nice guys! But here in the newsgroup, we let fly with the

> just one of the rough neighborhoods in it

Thank you. I look forward to learning more about this hobby. I'm glad I've been able to have my eyes opened to some of the issues surrounding code/no code arguments, even if some of them have been proferred with a heaping helping of pepper!

Brian:

Been there, done that. We totally dropped the code testing requirement
for a Technician class license, giving up 97% of all amateur radio
frequency allocations, in 1991. What we got wasn't a bunch of "new,
excited members," but a bunch of middle-aged to elderly white men,
who proceeded to set up on 2-meters and use it as a shorter-range
version of CB for gassing away with their cronies all day long, with
virtually no technical involvement whatsoever. Then, in 2000, we
reduced the code testing requirement for a General or Extra class
license to 5 WPM, and what we got was a bunch of "instant
upgrades" due to grandfathering of those who passed the 5 WPM
code test anytime in the history of the Amateur Radio Service and
could provide some sort of proof. These measures have created
a mere 1.5% overall growth in the last 2.5 years. Giving away
code testing entirely, and further reducing the written testing
requirements, would probably never achieve anything like an
additional 1.5% growth in the same time. You said we'd get
"hundreds" of new hams -- well that's about right. What we really
need to secure our generous spectrum allocations, and give us
some political clout, is to get our numbers up to a million or so.
Throwing away our licensing requirements hasn't achieved that
goal so far...or even given us a decent start. Got any more ideas?

Just as you think the code requirement may be silly, your attitude
of letting it stop you from getting a ham license is just as
silly. If you want the license learn the code and get it. It is
your lose if you don't.
You can start out with the no-code tech to get into ham radio, and
if you find it worth your time, then learn the code and upgrade.

[MUCH snippage]

> What would you like to learn?

I'd like to try my hand at some 6 meter DX to start out... I've signed up for the local ARES group as well, we'll see where that goes... umm, I think the DXing part appeals to me quite a bit; possibly contesting in the future, but for now it would just be fun to make contacts from all over and fill up my log book. My primary hobby is amateur astronomy. I'm part of a local astronomy club and we've recently set up a special interest group within it that is devoted to radio astronomy- we've even procured time on another club's radio dish. I am eyeing this too, though I've not joined that group yet... I've been kinda busy with local school outreach events to go there right now. But it seems pretty interesting!

Presently, my area of ARS study is to find out more about antennas and transmission, and what types of antennas are best used for what bands, and so on. Lots of great reading out there on antennas- it's almost a separate hobby within the ARS. Also, I'm interested in building a more complex transceiver in the not-too-distant future- maybe one of the Ten-Tec kits?

Thanks for the welcome too.

I bought those at the local hamfest last month- so far so good. I'm also using the G4FON program, which is very good, and free for the download. I have not found that I can practice every day, but even every other day seems to be working. I am learning the characters quite quickly and I think it'll mostly require just lots of practice to get comfy with the speed. The G4FON program is really good for that- it shoots out random characters at 13 WPM (I have it set at half-speed for now) and since the lessons aren't the same from one to the next, I can't memorize the lessons like I might be able to memorize the practice on CDs or tapes.

I'm finding that I'm learning the code in rhythmic fashion- that is, I'm association the characters with other sounds or phrases to help me remember them as a whole "sound" and not just dits and dahs. Seems to work for me, others' mileage may vary I guess.

I would suggest somethig rather different.

Take out the code requirement, and put in the test some DSP questions
(how to make filters, equalize volume, remove noise, and modulate in
phase, frequency, quadrature, etc) as well as more advanced circuit
design.

The code requirement is just silly.
Code is just one of the many ways to encode a signal, a way that
happens to be possible to do by hand. But why bother with it?
That it is useful in emergencies is a ridiculous thing - if your
transceiver works, you might as well talk into it, so also general
SWL, and not only hams, can understand your transmission.
Instead, with the increased ease with which signals are digitized,
DSP should really be required knowledge.
I mean, it takes so little nowadays to feed the signal into an audio
board
or better A/D converter, and then start doing things digitally...

In fact, consider this: DSP should be required because, in case of
emergency, you hook up your PC/laptop audio board to the radio, and
there you go,
modulating any way you want...

Code is what keeps me getting a ham licence.
I just don't suffer fools gladly, and the code requirement is foolish.
If I want to waste time, there are many more pleasant ways to do it.

Cheers!

Peter

Oh and one more thing: I think it is incredibly funny that in a
country where you can get a driver's licence without knowing how to
operate a stick shift, you cannot operate ham without knowing code.

There, now flame me.

You're wrong, of course. If you look at amateur radio from the view of a non-involved historian, the only regulatory change which had a significant statistical impact was the advent of the Novice license back in the early 50's. As originally envisioned and structured, Novice was an incredible smart regulatory move, perhaps the last smart thing the FCC did for the health of the Amateur Radio service.

Other than that, changes in licensing requirements have served only to generate sales of ink, to excite the excitable minority, and to give the Unabashers another reason to cancel their ARRL membership or to buy a life membership. No other impact is evident, and won't be after this current curve in the regulatory road. Hams will still be hams, and the excitable minority will get excited all over again. In about 2012 we'll be awaiting the next "restructuring" plan. Yawn.

Ban everyone who is not 100 percent in accordance with your views . Who the heck would you then post with?

Get real, everyone is entitled to their opinion.

Some where between you and him is probably a reasonable solution. I have noted that of those who got a ticket with little work, many are not renewing. A thing only has value when we have to work for it, unfortunately the ticket no longer requires much effort and has no real value to the recipient.

Still stuck in my mind is sweating before a steely eyed FCC examiner, drawing schematics, sending, and receiving code. Did I enjoy the process? Nope! but I did enjoy being able to count myself among a group of fellow hams that had gone through the "baptism of fire".

I don't care a wit that some folks have 5wpm licenses, You have yours and I have mine. I feel mine is worth more, but that is my opinion. Your mileage may vary...

Allow others to have their opinion, and now that the horse is dead you may cease the use of the whip.

IMHO,
Requiring A/D knowledge is equally as silly as requiring knowing code.
A compromise test of all the various technologies is clearly the logical
way to approach licensing/testing and they attempt to do this to some
degree. But technology is changing rapidly and the wheels turn slowly.
I think we are at a point where a ham should know what A/D means even
if its only picking out the correct words on a multiple choice test.
But hmmm, isn't that basically what the code test is?

Ranting off from a recent thread on r.r.a.a. one would get the
impression that knowing the brand names and specs of current products
(the Hamstick thing) is more important in making a 'good' ham.

The League is pretty much in control of testing and licensing these days
and I'm of the crowd that thinks they are doing everything bass-ackwards

and ultimately alienating radio folks (both new and old) from their organization in favor of whiz-kid technology. I don't desire things to stay quagmired in the 1950's but I don't see the need to overwhelm the bulk of the ham community with articles that are better suited for an IEEE publication. If, back in the 50s, they published *ONLY* SSB stuff, the rank and file membership would have tossed in the ARRL towel...much like the situation we see today. QST is the League for most people and basically it (they) have become nothing more than another modern electronics magazine publisher, not a mouthpiece for amateur radio as a hobby for all age groups.

Great gobs of bovine excrement, the license is simply insufficient
motivation for you to learn code. The "suffer fools" nonsense serves only to
cover up your lack of motivation. Learning anything is simply one more
exercise in broading one's life experiences.

<snip>

We now interrupt this boring thread where ham's bicker yet again about
licensing for a bit of light entertainment.

Community Service

One day a florist goes to a barber for a haircut. After the cut he
asks the barber about his bill. "I am sorry, I cannot accept money
from you I am doing community service this week." The florist is
pleased and leaves the shop.

The next morning when the barber goes to open his shop; there is a
thank you card and a dozen roses waiting at his door.

Later a cop comes in for a haircut and he also goes to pay the
barber, and the barber replies: "I am sorry I cannot accept
money from you. I am doing community service this week." The
cop is happy and leaves the shop.

The next morning the barber goes to open his shop; there is a thank
you card and a dozen donuts waiting at his door.

A Democrat comes for a haircut and when he asks the barber what
he owes, the barber replies: "I am sorry I cannot accept money
from you. I am doing, community service this week." The Democrat
is very happy and leaves.

The next morning when the barber goes to open his shop, a dozen
Democrats are lined up waiting for a free haircut.

A first grade teacher proudly proclaimed to her class one day that she was a liberal Democrat. She asked her students to raise their hands if they were liberal Democrats as well. Not really knowing what a liberal Democrat was, but wanting to be like their teacher, most of their hands flew up into the air. There was, however, one exception. A girl named Lucy had not gone along with the crowd. The teacher asked her why she had decided to be different.

"Because I'm not a liberal Democrat" she replied. ''Then, what are you?'' asked the teacher,

"Why, I'm a proud conservative Republican," boasted the little girl. The teacher, a little perturbed, asked Lucy why she was a conservative Republican.

"Well", she said, "I was brought up to trust in myself instead of relying on an intrusive government to care for me and do all of my thinking. My Dad and Mom taught me these things, and they are both conservative Republicans, and so now I am a conservative Republican too." The teacher, now a little embarrassed and maybe even just a bit angry, said, "That's no reason! What if your Mom was a moron, and your dad was an idiot. What would you be then?" The teacher paused, a bit smug, certain that she'd put the girl in her place, and slowly let a sly smirk creep across her face.

"Well, if that were the case", said Lucy after a moments thought,"then, I suppose I'd be a liberal Democrat."

Now there is an idea for the next test question pool,
questions that determine if we are sane or not. I dare
say most of us would fail that test ;)

I have said it for years about CBs and now I can say
the same thing about Ham radios. They should make
you pass an intelligence test before letting you use
a radio to talk on!

Speak for yourself.

As long as you're asking questions like that, maybe the questions should probe to see if one actually HAS A LIFE OUTSIDE OF HAM RADIO. Now, from what I have observed, THAT is a 90% failure rate!

>I have said it for years about CBs and now I can say

That's one of the things I've asked repeatedly--why anyone should take
him seriously.

You really DO enjoy being wrong, don't you? In fact you don't know the difference between a nocoder and a newcomer who is learning the code. Get your head out, JJ and smell a little sunshine. The change might just be refreshing. Jackie isn't the sort of ham that is the problem, you and Brainless Burke are.

Oh, by the way YOU are the newbie on this block. I've been licensed several years longer than you. When FCC came out with incentive licensing I jumped in and immediately took all the tests to regain all the frequency spectrum I had lost, which meant doing all the tests through Extra since I held a Conditional General at the time and got credit for only the Novice. When the VE testing system was first started, I organized and ran a VE team for the first eight years. Initially it was the only team within a hundred miles, and we drew applicants from afar, until we had licensed so many other hams who started their own VE teams that we actually found ourselves with no one left to test, and out of business because of the new teams. I was glad to let them carry it on, I had done my part.

And how many no-code techs have you VE'ed into the hobby? None? that's what I thought. You're all mouth and no go.

> You're so hung up on your lofty status

JJ you're truly clueless. It isn't that any Extra has lofty status, it's just that the codebashers who "just couldn't" have so little. Anyone who wants to become a ham, *reallyh* wants to become a ham, has no problem with spending the time and effort to master the requirements to whatever level they decide is for them. EXCEPT the codebashers. If you consider them to be an asset to ham radio that's your personal problem. So code is old and has largely been replaced in the commercial market. So what? that does nothing whatever to diminish it's characteristics nor its usefulness as radio's most basic communications method and still a much used mode within ham radio. If you don't understand that your understanding must be regarded as seriously flawed.

There will be a clue in that statement, for anyone who is at all informed and interested in the facts. Of course you already know, but it should be plain to most everyone by now that the basic reason for this is so is that voice modes are very much inferior for communications at low power levels while many of the digital modes including CW are very much useful at power levels which leave most SSB and FM QRP signals useless under much if not most of the time.

Yeah, most of us are already over it. Those who are not still complain about it all being someone else's fault that they were "excluded" from ham radio by the existance of a code test. That's nonsense of the most extreme sort.

Seven nice steps to DESTROY and KILL ham radio. Only several fanatics would stay. How would you like to be re-tested for your driving license every year ? Or to be subject to regular tests from the law codex under the penalty of losing your citizenship ? BTW, do you have a written permission to use the "trademarks" Wouff-Hong, Rettysnitch and Uggerumph ?

God save the hamradio !

I might agree if the theory questions were "fill-in-the-blank" and "draw-the-schematic", rather than multiple choice - where the answer is right in front of you. This would help ensure that the person has some actual knowledge rather than just having memorized a few answers from a test prep book.

In reality, your proposal would not attract any significant quantity of new hams because it would make the test harder than it is now. In today's "instant gratification" mindset world, many people want every thing "now" and don't want to expend any personal effort to get it. That's why the code element is constantly being complained about by so many...

I see where you are coming from, but I don't necessarily agree that I'm being personally insulted because I'm a "no-coder". Of course I'm a no-coder- I'm not the the air with a paddle because I'm still learning it. I haven't yet passed the test. The whole gist of my original post- "how can we win?" was that I felt that beginners might be discouraged by those who looked down on newbies to the hobby because they had to pass a test that didn't include code in the first place.

I didn't learn CW and choose to pass the tech and the general the first time, because I just didn't have the time to do so. It is good that one can take steps and gradually work into a higher license class. Who knows; I may end up not liking CW after I start to use it but that could go for several other modes as well. I'm not particularly interested in packet radio, for example- seems too much like chatting on the Internet to me. But to each their own.

No problem! btw, are YOU volunteering to be part of the VE system that
would have to administer an additional ~70,000 exams-for-renewal per
year? Or is this a "let someone else do the work" idea?
>
> Step 2: The passing score for written exams needs to be raised to 90%.

Again, no problem. But how are you going to convince FCC?
>
> Step 3: Code elements should be 13 wpm for General, and 20 wpm for Extra.

Again, no problem. But how are you going to convince FCC? What new
argument will change their minds after they have been gradually
phasing out code testing for the past 20 years?
>
> Step 4: Make the no-code license one year non-renewable.

Why? And are YOU volunteering to be part of the VE system that would
have to administer the tens of thousands of additional upgrade exams
per year? Or is this a "let someone else do the work" idea?

> Step 5: Cancel your league membership until they decide to work
> to improve things.

Did you read the ARRL's proposal and comments on restructuring? What
should ARRL be doing that they are not doing now?
>
> Step 6: Complain to the ARRL when-ever you hear an idiot on the air.

Why? Enforcement is FCC's job.
>
> Step 7: Turn in rule breakers to the FCC.

How many tapes have you sent to Riley?

Heck, this isn't even a new list! Just a rehash of one from May of
2000. The Troll-O-Meter judges unanimously disqualify it from
consideration due to its nonoriginal content.

>Also, don't waste your time with contesting.

The rest of the post would be informed "opinion" until you blatantly tell someone to "not waste (thier) time" with contesting.

Why don't you let people find out for themselves if contesting (or any other aspect of Amateur Radio, for that matter) is for them...???

>Contesting is finding as many
>stations as you can, calling CQ, and then logging it in.

An overly simplistic and inaccurate representation of what contesting is all about.

>It gets boring after
>the first few contacts. Doing the same boring thing over and over again can
>be
>boring.

....UNLESS you happen to like trying to compete against other like-minded operators who tweak-and-tune thier stations to get every last bit of performance out of them...UNLESS you like trying to beat the skill of otehr operators, either in "single op" or "multi-op" stations.

>If you are looking for Amateur Radio, you will not likely find this in the
>Ham
>Radio clubs or in the CB hobby.

First of all...WHY would you look for "Amateur Radio" in the CB hobby?

Secondly, what DO you expect to find in a Ham Radio club...???
Again...another very unenlightened opinion from someone who obviously does not have very much experience from which to make an informed and valid opinion.

By the way, "vshah", WHAT was your callsign again...??? How may YEARS have you been an Amateur? (And in what nation?)

>If you want to "Ham", contest, Morse Code,
>build antennas, learn about appliance operation, brag about propagation
>conditions, use strange keywords, and part of the "Ham" culture, than Ham

True...that's why they left it to "us" to determine how we want to lay it
out, THEN they enforce that.

Not exactly. You have to learn morse code to obtain an HF license, not because of any shaming. You learn morse code to be able to communicate with others who are using morse code. You learn morse code for the sheer joy of learning--in much the same way one would achieve satisfaction from learning any of the other material required for licensing.

> Then, they denigrate the lowest license class by calling it a
> "Technician".

"They" call it "Technician" because that is the name of the license class.

> In reality, some may know more about the material than Extras,
> but they are at the lowest license class because they cant/wont learn Morse

One can design and build circuits without any amateur radio license whatsoever.
Your statement about those advocating or teaching morse code is not based upon any facts.

> Also, don't waste your time with contesting. Contesting is finding as many
> stations as you can, calling CQ, and then logging it in. It gets boring after

Designing circuits all the time can be boring. Participating in radio
direction finding all of the time can be boring.

> If you are looking for Amateur Radio, you will not likely find this in the Ham
> Radio clubs or in the CB hobby.

While I'll agree that one wouldn't likely find amateur radio in the CB
hobby, I'm stumped by your comment regarding "ham clubs".

> If you want to "Ham", contest, Morse Code,

Yeah, I spend much many of my evenings developing strange new keywords.
It is also great fun to brag about the propagation and to allow others
to think I had something to do with bringing it about.

Jim:

Not to complain <grin>, but you skipped my favorite part.

In Step 5 you are supposed to cancel your ARRL membership. Then, in Step 6 you are supposed to complain to the organization from which you just resigned and in which you now have no standing. I think we need a step 8: LCT at 2IAO (Logical Consistency Test at 2 Ideas at Once level.)

plampione@yahoo.com (Peter Lampione) writes:

>The code requirement is just silly.

Peter:

Pray tell us exactly what your qualifications are for making such a
statement about a mode of which you apparently know little, if
anything (proof below)?

>Code is just one of the many ways to encode a signal, a way that
>happens to be possible to do by hand. But why bother with it?
>That it is useful in emergencies is a ridiculous thing - if your
>transceiver works, you might as well talk into it, so also general
>SWL, and not only hams, can understand your transmission.

Well, if more hams were *required* to know the Morse code, and
were tested for useful proficiency in same, then this particular
statement would not be true, would it? BTW -- you may be
surprised how many SWL's can copy the Morse code at high
speeds, with or without a ham radio license.

>Instead, with the increased ease with which signals are digitized,
>DSP should really be required knowledge.

No argument here -- I am a strong proponent of digital modes!

>I mean, it takes so little nowadays to feed the signal into an audio
>board
>or better A/D converter, and then start doing things digitally...
>In fact, consider this: DSP should be required because, in case of
>emergency, you hook up your PC/laptop audio board to the radio, and
>there you go, modulating any way you want...

All true. However, I believe you'll find that the largest numbers of
users of digital modes today are also hams who are code proficient,
having been licensed and tested in the Pre-Restructuring Era. I
have had very few QSO's in PSK31 with hams who weren't also
proficient CW operators (or claimed to be).

>Code is what keeps me getting a ham licence.

Well, since the maximum requirement is only 5 WPM, there's
hardly any reason for that to be so.

>I just don't suffer fools gladly, and the code requirement is foolish.

That's funny -- most of us code testing supporters have been saying
the exact same thing for years!

>If I want to waste time, there are many more pleasant ways to do it.

I found learning and using the Morse/CW mode to be the most
pleasant and enjoyable aspect of my participation in the amateur
radio service.

>Cheers!

Cheers to you, mate!

Jackie, that would be because you're NOT a nocoder. A nocoder is one
who totally rejects the very idea of hams needing to learn Morse code,
and constantly harangues anyone who supports CW or a code test
requirement for hams. You don't do any of this and you're learning the
code. How anyone could consider you to be a nocoder is beyond any
rational explanation. But you may have noticed there are a lot of
irrational nocoders holding forth on this NG. ;-)

Just because one holds a codeless technician license doesn't mean s/he
is a nocoder, obviously. All that is a figment of the twisted minds of
folks like JJ and Burke Turke.

Of course I'm a

If you really want to increase the Ham ranks, and improve people's knowledge
and skill at the same time...

Have a monthly operating contest where the winner gets $5000.
Have a monthly design contest where the best project gets $5000.

After winning, you would have to sit out for 2 years so others could
benefit.
The FCC could fund this using the revenue from the spectrum of ours that
they're selling to the cellular crowd and other big lobbies ;-)

Hmmm.... I had a license with code requirements (many years ago), but I also
have problems with certain kinds of motor skills. It isn't impossible, but I do tend
to find the competency of 100W+ CBers who happen to have ham licenses to
be disappointing.

My biggest frustration now is the use of SOT type packages for my RF design, but
I am working through the issues, and learning how to deal with the technical problems.
I suspect that much of the ham hobby is being supressed by the commonly available
parts technology (and at UHF+, the needed smaller dimensions.) However, from a
time and 'exclusive club' standpoint, I suggest that the competency of 95% of the hams
would be quite insufficient to build and fully understand their equipment.

This is akin to a brutish physical skill overwhelming intellectual comptency. Morse
code is only a brutish, anachronistic (most of the time) skill (which is problematical
WRT poor fine motor control.) It is apparent that some in the ham community
are compensating for lack of sufficient mental skills by making it exclusionary based upon
physical skills.

Isn't it a real paradox? The smarter and more beautiful the radios, the
dumber the hams who use them! :-)

Ham radio is now almost an endorsement on CB, rather
> than having to REALLY know (not just remember) something appropriate for
> the current world.

I certainly have no problem agreeing with this, although it really has
little or nothing to do with Morse code on ham radio. You can always use
a keyboard to send if you can't physically handle a manual key or
paddle. I may go to one of those due to arthiritis myself one of those
days. But a computer program does a really poor job of copying, as far
as any I;ve been able to evaluate shows. That will probably change if
some of you more computer literate souls choose to keep working on it.
Looks like you'd rather just dump the whole mode. That I don't
understand. I do understand why some people don't like th emode, and I
can appreciate that. There are things I don't like, too. I have no great
love for Morse code(despite the rantings of some of the more rabid
anticoders who post here), but I learned to respect it for what it is
and appreciate it for what it offers-the most basic, simple, easily
implemented mode of radiocommunications yet devised.

Does that mean I or any other CW supporter would in any way advocate
use of CW -at any time- to the exclusion of better more efficient modes?
Of course not, again despite the rumblings of some anticoders posting
here. I, and most other code supporters, routinely use advanced digital
modes, some of us use them more than CW. Again, that does nothing
whatever to diminish the qualities of Morse code. Some of us understand
the mode well enough to consider it to be a valuable asset to ham radio.
If you don't, that's certainly your privilege.

Yeah lets add relevant stuff to the Amateur tests. How about stuff like....

What is the formula to cut a 1/2 wave diploe in free space ?

or

What is splatter in a SSB transmitter and how can it be avoided?

or

Explain why using the lowest power to maintain communications is helpful to
others on the band.

In otherwords lets get some questions on there that need to be know by the
majority out there.

Better than doing something else with my hand...:/

But why bother with it?

Why not?

> That it is useful in emergencies is a ridiculous thing - if your
> transceiver works, you might as well talk into it, so also general
> SWL, and not only hams, can understand your transmission.

I don't care if the general population can understand me. They can't
talk to me, so whats the point?

> Instead, with the increased ease with which signals are digitized,
> DSP should really be required knowledge.

I know plenty enough to be able to use DSP. I have DSP built into my
radio, and I have it outboard on my computer. Most of my PSK-SSTV,
etc, etc programs also use DSP. Big deal...

> I mean, it takes so little nowadays to feed the signal into an audio
> board
> or better A/D converter, and then start doing things digitally...

You said it... So what makes it so special?
>
> In fact, consider this: DSP should be required because, in case of
> emergency, you hook up your PC/laptop audio board to the radio, and
> there you go,
> modulating any way you want...

I can train a smart monkey to do that. But overall we have a problem..
If I have an emergency, can I call you to come over to the scene and
bring a laptop? I have a radio in my car, but no laptop yet. Of
course, I could talk into the mike, or use a code key, but I want to
be stylish like you. Hummmm, you say you live many states away? Take 5
days for the laptop to get to my accident scene via UPS? Oh well...
I've still got my hand to keep me company in the meantime...

> Code is what keeps me getting a ham licence.

Why? Are you "gifted" or something?

> I just don't suffer fools gladly, and the code requirement is foolish.
> If I want to waste time, there are many more pleasant ways to do it.

Well, ok then. A man's got to know his limitations...

>
> Oh and one more thing: I think it is incredibly funny that in a
> country where you can get a driver's licence without knowing how to
> operate a stick shift, you cannot operate ham without knowing code.

What does a country have to do with this? It's international treaty.
BTW, in this state, the car you take into the driving test will
determine if you need to know how to manual shift or not. If it has a
manual transmission and you can't shift it well enough to drive, you
won't get a license. You will have to buy a new car with an automatic,
and retake the test. Expensive way to get a drivers license if you ask
me...

>
> There, now flame me.

Naw...Just pity...Anyone that lets a snail slow 5 wpm code test stand
in their way, doesn't really want a ticket too bad. What does it take
to learn? All of two weeks? Good grief...How long did it take you to
learn all about DSP?

Next.... MK

Oh I am quite willing to learn things in general!
But the point is, there are so many things to learn,
and I prefer to learn useful things to useless ones.
I'd rather spend time learning more about DSP, that can
be useful to me to post-process radio signals, than code,
that I am likely to never use.

And another poster commented that I simply not motivated enough
by amateur radio to learn code.
True, by definition.
I sometimes listen to what hams talk about; 95% of the time
they talk about their radio setup.
The idea of having to learn code, get a licence, and build an
antenna, to be able to talk about my radio on the air
is ... uh ... less than overwhelmingly enticing.

I predict that, with all the new technologies available now
(cellphones, internet, computers, etc etc), amateur radio will
simply die out for lack of interest; the ARRL and others are
doing a pityful job of getting the newer generations involved.
Too bad, because some things going on with packet radio,
computers, routing etc are incredibly cool.

They keep up this old-fashioned requirements, and they don't
realise that, as the younger people are turned off,
their radios will also eventually be turned off, when FCC
reclaims the frequencies.
They see the refusal of somebody to learn code as that person's
problem, and they don't realise that the lack of membership will
soon be their problem.

Sooner or later the FCC is going to reclaim those frequencies
due to lack of interest, and nobody in the US consituency will care,
except the 0.0001% of the population - hardly a political constituency.
Come on - listen to the actual _content_ of ham conversations:
if SW bandwidth ever becomes valuable, I don't think ARRL has a chance
to argue that there is something worthy going on there.
And the original purpose, to spread the knowledge of radio technology,
is moot now - with so many other important technologies, why would
one worry so much about radio?

Many hams are now in their 50s. I predict that by the time they are
dead, in about 25 years, amateur radio will also be dead, reduced to
a small number of frequencies used for emergency communication.
All the rest will be commercial bandwidth.

In my circle, being called a "real technician" is a very big compliment.

In reality, some may know more about the material than Extras,
> but they are at the lowest license class because they cant/wont learn Morse
> code. This tends to misrepresent Ham Radio's correlation between license class
> and actual ability.

Let's talk about "can't" first. I have severe tinnitus. I have two
different tones (different in each ear) ringing 24/7. I read lips and
use closed captioning on television. I don't want to hear about "can't"
It was difficult for me to learn the Morse, but that's just too bad. I
did it anyhow.

Let's talk won't. If a person "won't get into it because of refusing to
learn Morse code, they are excercising their right's Like a famous
person once said, If they don't want to come to the game, there's no way
your gonna stop them! It's just another part of the test. I doub't I'll
ever get into satellite comms in the ARS. Should I demand they remove
thos questions from the test? Its mode specific ya'know.

> Amateur radio can be so much more than just learning Morse code.

Gee, we agree again.

> Those that tend to advocate and or/teach
> Morse code don't seem to want to do the other activities. Don't limit yourself
> to Morse Code.

Whoooaah there, Mr Vshah. On what grounds do you base *that*? I hope
you can cite some good sources.

> Also, don't waste your time with contesting. Contesting is finding as many
> stations as you can, calling CQ, and then logging it in.

If you do it in the order you describe, no wonder you don't like it.
8^) and there are a lot of hams out there who disagree with you and go
contesting all the time.

Peter,

That's great news. You should know that you can get involved hip-deep in amateur radio, including DSP (pre- and post-process) without learning a single dit of Morse code. Just take the written exam, Element 2, and you'll be licensed to experiment on literally many GHz of really prime spectrum.

We'll be looking for you to join us soon. I'll bet you can teach us a thing or two.

Let me explain: it is an unnecessary and anachronistic barrier to entry. Frankly,
'the code' was really a prominent mode of operation at one time, but now it is
mostly a barrier to entry. It is MUCH MORE useful to center ham radio on
creative endeavors (which can also include working long distance in poor
conditions with code.) I am NOT anti-code, but I am anti-code exclusivity.

There really needs to be a basic ham license w/o code. To work at all in the
'code' bands, you'll need to pass the code test (similar to the good old reserved
bands for extra.) To be able to work anything but phone in limited bands,
you'll need the higher technical endorsements. So, there would be the
basic general ham license, which only provides limited communicator 2M,3/4M band

permissions. After that, for the real traditional 'u build it' ham stuff, then your technical endorsement would give you access to all but the code bands. There might even be multiple levels of technical endorsement (e.g. HF, UHF.) For the code bands, there would be the <10wpm bands and the >10wpm bands (or even finer grain.)

For example, more often, a ham radio operator SHOULD be able to grab a $2 PHEMT, create a simple board (with VERY FEW components) and have his/her 1dB NF 2M or 1.2GHz preamp. Nowadays, the poor schmuck will be spending $120 (or so) for some boutique preamp with 'magic parts or things' in it. (Well, 1dB NF would be a little tricky, even with a .2dB NF PHEMT, but you get my idea!!!)

Here in the US, technology is moving offshore, and even for strategic reasons, helping to motivate technology hobbies other than computer geekdom would be a VERY GOOD THING.

I'd much rather live in a world where ham operators can experiment with new or forward looking modulation schemes (sometimes with DSP), rather than only plan for a post-WWIII world, where there are a few radio sets and morse code is the only economical way to communicate.

The Morse requirement advocates seem to be approaching the fringe status of those who had stocked up their food for the YR2000 'issues'. I am NOT against Morse code, but against the prequisite for significant ham radio operation. The Ham community does have ALOT of morse operators, but TOO TOO FEW individuals who build their rigs (even significant parts of them.)

There are some cases (like you) that have the code and technology, but that isn't wrong. You would have both the code band endorsement and the experimental band endorsements!!!

John

We've got great news for you, John!

You can live in that world TODAY without studying even a single dit of Morse code! Just hustle on down to your next local VE examination session and tell them you want to take Element 2 of the exam. Within days you'll be licensed to tinker and experiment on literally GHz of prime spectrum with DSP, spread spectrum, or whatever other modulation scheme strikes your fancy. While you're at it, join AMRAD, TAPR, and AMSAT and participate in any of their dozens of digital and space-borne technology projects.

http://www.amrad.org
http://www.tapr.org
http://www.amsat.org

We're looking forward to your joining us.

That's a bit illogical, Dave, because:

- Mt. Everest is a challenge to conquer
- Mt. Everest is impressive and splendid
- Mt. Everest won't go away if ignored

;-)

HAW! That's absolutely correct! What's more, by leaving the
organization, its influence with the FCC (who is actually in charge of
making any and all of the proposed changes) is reduced.

Even the Bulgarian judges shake their heads in disgust over the poor
quality of the troll.

news:<haYC9.96167$QZ.14825@sccrnsc02>...
> Why not just drop the archaic code requirement,

FCC's hands are tied on that one. The ITU treaty requires code tests
for an HF ham license. FCC isn't going to violate the treaty - they
said so in their Report and Order. If/when the treaty changes, FCC
will most probably eliminate Element 1 - but not until then.

Meanwhile, FCC has already reduced code testing to the barest minimum
that they think meets the treaty requirement - 5 wpm. Is learning
enough Morse code to pass the current 5 wpm code test really so
difficult?

> beef up the theory
> requirements

How? What, exactly, would you change?

Many of those who commented on the recent restructuring offered
practical ways for the FCC to "beef up" the theory requirements for
the higher-class licenses. In response, FCC reduced both the number of
tests and the total number of questions for each license class.

> and get hundreds of new, excited members tomorrow?

We're getting thousands of new, excited hams each year right now. The
number of licensed hams in the USA has reached an all-time high.

> That'll be
> the biggest shot in the arm the hobby has seen in decades.

If it isn't, will you support going back to the old ways?

> Brainless Burke are.

You and newbie larry have stated over and over your disdain for
those who come into the hobby via the no-code route. You and larry
even claim that hams licensed now under what you call the dumb
down requirements with the 5wpm code upgrade to any class, can
never achieve the lofty status that you and larry have, because,
as you claim, the test were harder when you got your ticket, and
you had to pass 20 wpm to get your extra. Therefore no ham today
can ever be a 'real ham' in your way of thinking, so no matter if
Jackie does go on to upgrade to extra, you and larry will never
put him on the same level you claim to be.
To you anyone who comes into the hobby and chooses not to upgrade
to extra is just plain lazy and has no ambition in your mind. Did
it ever dawn on you that a no-code ticket may just suit the needs
of some hams just fine? That maybe some have no desires to upgrade
just to get HF privileges? That does not make them any less of a
ham that the holder of and extra.
Your are the kind of ham that is a problem, the kind that thinks
that no one coming into the hobby under today's standards can ever
achieve your imagined lofty status.

(I'll be reviewing the links, perhaps to bring my viewpoint up to date, and
reconsider restarting my hobby from 25yrs ago.)

Apparently, the world has changed indeed since I had my ham radio license. I
got mine (the old tech license) a few months before my First phone just to see
what FCC tests were like. I also played around, but it was before the most
interesting stuff that makes UHF on up really cool nowadays.

When I did take the tests (both the tech class and first phone) in approx 1971,
I was VERY disappointed as to the lack of technological depth (even as a
Soph highschooler) required.

In a way, we reap what we sew, and the lack of technical requirements has
further enabled a general movement towards a dominant communicator-only class
of hams. I am VERY happy to see that some of the code prerequisites have
been lifted, and I will certainly follow your links after this post. I'd also like to
see alot of very broad ham interest, that isn't dominated by communicator
type stuff, but also include more technology than currently today. Technology
MUST NOT dominate ham radio, because it is easy to overshadow the
purpose of communication. When communication almost fully dominates the
hobby, esp archaic modes, then technology might be getting too much of
a back-seat.

I'd certainly be willing to advocate a license class for ham radio operators that
would ALMOST make that endorsement into an indicator of some technical competency.
With any significant motivation of the level needed to learn code at 13wpm or

even 5wpm, the newbie ham could almost become a naiscent EE*... (*Well, maybe that is a little optimistic, but not too far off.) Perhaps I'd be more accurate to claim that a person could at least understand the terminology and the issues of design, building, testing and even computer interface. This would provide the toolset that would allow the more motivated individuals to continue on with some self-schooling.

It is probably fairly clear that my own interests are of a technical nature (both EE and software (OS, DSP).) All of my ham hobby interest was based upon the technical and innovation side, but that had seemed to be too de-emphasized.

I'll definitely give the ham stuff a look-see again. My own interest, being technical, would also include helping people who want/need to learn how the stuff really works :-). I am also NOT INTERESTED in taking anything away from ham radio -- code is good, but almost complete understanding and significant (not necessarily complete) technical self-sufficiency is also good.

John

I am VERY HAPPY and encouraged about this. I happen to see ham radio as
a potentially great hobby (and important in my past), but also a wonderful
strategic asset from both the historically too-deemphasized technical training
ground and also the operational (emergency and communications) aspects.

Wouffgang Larry, I don't see anything in there about White Supremacy
so maybe you're almost legitimate.

1. No Automatic Renewals - Agreed. We need to keep this economy
rolling one test fee at a time.
2. passing score 90% - Make it 100%. If Bruce Without Error can do
it, anyone should be able to do it. Some may have to study, though.
3. Code elements 13 wpm for General, 20 wpm for Extra. We've had 160
years to perfect the code. Lets at least get it up to the speed of a
greasy smelly dinasaur tty - 55wpm.
4. Make no-code license one year non-renewable. I've been told that
anyone can learn code in a matter of weeks. Make the NCT 6 weeks
non-renewable.
5. Cancel your league membership until they improve things - That's
been tried - just cancel it.
6. Complain to the ARRL when-ever you hear an idiot on the air, and
Complain to Al Gore when you see one on rrap (cc: Al Gore).
7. Turn in rule breakers to the FCC - Cuffed and stuffed? or just
send in their call sign?

What newbie larry really meant was that since the no-code tech now
has access to 97% of all amateur radio frequency allocations, that
these lowly no-code techs ruined that amount of spectrum for the
'real hams' like him.

Depends upon just who you are trying to contact, for distant
contacts that depend upon propagation that may be true, but you
can always find a band where you can make voice transmissions, if
nothing more than VHF/UHF locally or even HF frequencies locally.
This nonsense that the conditions get so bad that all frequencies
are affected such that cw is the only mode to get through is just
that, nonsense.

Is typing or spelling necessary for passing any of the exams? I thought
the writtens were all multiple choice.

Dick, you got a fever, man? I've not once read anything like that
from you. Not once! But I accept that as an earnest remark.

And in the "easily implemented" remark, it may be easily implemented
if you've been -trained- in the USE of Morse Code, but just learning
the code characters and passing an exam doesn't make it easily
implemented. You have to use it. And to use it you've got to have
people out there not only willing to put up with every little mistake
you make, but to actually be there and work through it. Listening to
W1AW and code tapes may make one an Extra, but it doesn't make one a
CW op. Meanwhile, 160 years after the invention of morse code,
novices are segregated to spaces and places where few are willing to
go.

> Does that mean I or any other CW supporter would in any way advocate
> use of CW -at any time- to the exclusion of better more efficient modes?

IMO, someone skilled in code needs to be on the Novice bands providing
the understanding that is required to get the next guy going with CW.
You've been a ham since Jesus was a Corporal. Make it your legacy.

Larry's post is a bit misleading.

Before February 14, 1991, all US ham radio license required both a code test (at least 5 wpm) and a written test. On that date, however, the code test for the Technician class license was dropped by the FCC. Technicians then and now have all amateur operating privileges above 30 MHz, which amounts to 97% of the spectrum allocated to US hams.

All of the HF/MF bands available to US hams today (160/80/40/30/20/17/15/12/10 meters) add up to just 3,750 kHz of space - less than 6 meters all by itself! Of course, those HF/MF bands are more useful/reliable for long distance communication with simple, low power equipment and antennas than the bands above 30 MHz.

Jackie:

The no-code Technician class gave the licensee 97% of all available
frequency allocations (everything above 50 MHz) without a Morse code
test.

Actually, I feel that the test material is very good and relevant, IF you actually understand the material.

The test covers the topics you mention and more. It covers a variety of areas, not just one aspect. It covers operation, regulations, practical circuits, emissions, and antennas. I feel that the relevant material is on these exams.

However, with the question pool format, you do not have to know the material to get the right answer. People recognize the answers, use memory tricks ON THE ANSWERS. Then, one week later, they cannot put up an antenna using the same formula that was on the exam. So, people are just memorizing the answers and not learning the material.

Also, I feel that there should be real preparation for these exams, instead of the "license in a day" sessions, where they give you the questions and answers.

I agree with Peter. As an EE, I would pass that test right now. As I have said before, we don't demand that every computer user learn 2s complement math (or even DOS) prior to allowing them to use windows, linux, etc. The very idea sounds rediculous to us. The CW requirement is no different. Just my 2 cents.

From: Mike Coslo mjc5@psu.edu
>In my circle, being called a "real technician" is a very big compliment.

Nowadays, everyone is an "Engineer". The title has been so overused and devalued, that in some cases a real Technician's job is more interesting and more skilled than a title "Engineer".

What I was getting it is the perception of the Technician title. In some cases people do not investigate Ham Radio and are swayed more by the perception that the actual content.

>Let's talk won't. If a person "won't get into it because of refusing to
>learn Morse code, they are excercising their right's

I am all for people learning Morse Code if they want to. I can see that this is a useful skill in certain circumstances. I can even see how some people find it fun. Just don't impose it on those that don't want to. There are plenty of people joining Ham Radio just for Morse Code. Morse will not go away if the requirement is removed.

>there are a lot of hams out there who disagree with you and go
>contesting all the time.
I do not have anything against contesting. I can see how this can build up some useful skills. I personally do not enjoy contesting. However, I should let anyone who has not tried it decide for themselves.

>> Those that tend to advocate and or/teach

>yourself
>> to Morse Code.
>
> Whoooaah there, Mr Vshah. On what grounds do you base *that*? I hope
>you can cite some good sources.

I can only cite my experiences. I have been to the Ham clubs and Hamfests (MA/NH) and I find most are emphacizing operating,contesting, Morse. Few seem interested in the other activities.

Along what lines? Knowing guys who are assholes because of the size of their dicks...? Actually, I've only known one--my first husband. He was small and a small man also. However, in many, many conversations over the years with many women who've also had the same misfortune--it is pretty apparent that you guys with little "ones" have a real piss-poor personality.

So, yeah, I've got quite a lot of experience to use as reference. I notice that you, on the other hand, didn't bother denying the inference.

I think he's got it quite right, Dick. What would you say/do if someone
joined the hobby and decided *not* to learn CW? What would you do if
someone joined the hobby at entry level and decided that was just fine for
them? What would you do if someone new to the hobby actually disagreed with
something you had to say on the hobby?

Uh huh. Thought so.

Let's just keep it simple. To work any band / mode below 30 mhz. you need a
higher class license (oops, that's how it is now... :>)

>

None of us are, Jackie. :) That's just a lofty ambition of Dick/Larry et
al. One would have to "feel" insulted for them to work. I don't, and don't
know anyone here or elsewhere, feel insulted by Dick, Larry, or anyone I
know/speak to. I am a Tech+ licensee and actually don't really intend on
ever going any further.

>

>

That is, generally, the attitude of the Dicks and Larrys of RRAP. It's also
an attitude I've heard expressed on the air, both HF and VHF. However, as I
said, one must feel affected by the insults in order for them to work.

Question is: what do you think of people who may not choose to learn CW, or
who will enter the hobby with a Tech license and go no further? I would
hope that you are a person who would openly and generously welcome anyone to
the hobby--regardless of how they got here or what they intend to do with
it.

>

See...the Dicks and Larrys would have a problem with that. A really big
problem. That's where the differences with them lay.

> SWL, and not only hams, can understand your transmission.

Several times every year, shortwave conditions are poor enough that voice
transmissions are unitelligible. If you don't have a computer to work the
other digital modes, the only possibility left is CW.

> Instead, with the increased ease with which signals are digitized,

You aren't always going to have a computer available. I know when I go
traveling, I sometimes take my radio but not my computer.

There's no reason to flame anyone. It is a difference of opinion that should be calmly debated.

WRC-03 is next year. The preparatory meeting is happening now.

>Meanwhile, FCC has already reduced code testing to the barest minimum
>that they think meets the treaty requirement - 5 wpm. Is learning
>enough Morse code to pass the current 5 wpm code test really so
>difficult?

For some, yes. For others it is simply an ancient radio
requirement, outdated and outmoded, of value only to keep
long-timers satisfied.

The first radio hardware among amateurs was damped-wave
"spark" transmitters and galena crystal or "coherer" receivers.
If morse code "must" be learned because it was "the first mode
in radio communications," why don't the tests also include
"technical" questions on spark transmitters and crystal detectors?

>> beef up the theory
>> requirements
>
>How? What, exactly, would you change?
>
>Many of those who commented on the recent restructuring offered
>practical ways for the FCC to "beef up" the theory requirements for
>the higher-class licenses. In response, FCC reduced both the number of
>tests and the total number of questions for each license class.

The FCC *also* dropped any specifics on written test subjects,
allowing the VEC QPC to choose what those already-licensed
radio amateurs thought was applicable.

>> and get hundreds of new, excited members tomorrow?
>
>We're getting thousands of new, excited hams each year right now. The

>that I am likely to never use.

In this chatroom (aka a newsgroup) you MUST love and
adore the old ways. If not, you will be accused of several
different perfidies, up to and including a "hidden agenda of
destroying the US amateur radio service." :-)

>And another poster commented that I simply not motivated enough
>by amateur radio to learn code.
>True, by definition.

Same here...and I got into HF communications a half century ago,
never used morse code then, haven't had to in any military or
commercial radio task since.

But, remember the arena and the starving lions therein - not loving
morse code is the same as Treason Against The State (to some)
or "not showing devotion" (to the long-timers) to the ARS. In
general, non-love of morse code will brand you as sub-human,
of little or no intelligence, and a defiler of the Church of Morse.

>I sometimes listen to what hams talk about; 95% of the time
>they talk about their radio setup.

:-)

>The idea of having to learn code, get a licence, and build an
>antenna, to be able to talk about my radio on the air
>is ... uh ... less than overwhelmingly enticing.

That's the Ham Way. :-)

>I predict that, with all the new technologies available now
>(cellphones, internet, computers, etc etc), amateur radio will
>simply die out for lack of interest; the ARRL and others are
>doing a pityful job of getting the newer generations involved.
>Too bad, because some things going on with packet radio,
>computers, routing etc are incredibly cool.

Everyone but the already-licensed long-timers knows that
change is inevitable. Change is not acceptible to those
who were licensed long ago and haven't learned much of
anything else...except to memorize ads in QST for radio
equipment designed and made by others.

>They keep up this old-fashioned requirements, and they don't
>realise that, as the younger people are turned off,
>their radios will also eventually be turned off, when FCC
>reclaims the frequencies.

According to those in the rest of the radio world, there are
a great number of new things destined for the future beyond
the present-day cellular telephone phenomenon (one in three
citizens of the USA are subscribers).

The FCC has begun discussing Spectrum Policy toward that
future (see their website).

>They see the refusal of somebody to learn code as that person's
>problem, and they don't realise that the lack of membership will
>soon be their problem.

That doesn't seem applicable in this chatroom. Already-licensed
long-timers are stuck in their little fantasy land of status quo and,
unfortunately, the "turf" concept where long occupancy somehow
gives the credence over everyone else. Already-licensed long-
timers are who they are and don't seem to care for any new-
comers...except as vassals to chide and rule over. QED Google.

>And the original purpose, to spread the knowledge of radio technology,
>is moot now - with so many other important technologies, why would
>one worry so much about radio?

The "radio" to already-licensed long-timers is that of three to five
decades ago, based on standards and practices of an even longer
time back. That "must not" change. Any attempts to change it
will result in charges of having an agenda to destroy the ARS.

In a way, that charge is true...but only in the sense that change
destroys what these already-licensed long-timers know as "radio."

>Many hams are now in their 50s. I predict that by the time they are
>dead, in about 25 years, amateur radio will also be dead, reduced to
>a small number of frequencies used for emergency communication.
>All the rest will be commercial bandwidth.

Probably not...more likely amateur radio will have changed to a
much different form than what these already-licensed long-timers
know. That is anathema to these long-timers...a horror beyond
all imagining! :-)

I'll let you know my reaction just after my 95th birthday. :-)

It is the FCC that sets the testing requirements, and VEs are
required to abide by the requirements. If this did happen (don't
hold your breath though), there would be some VEs that would wish
they could make you take the code test, but they could not.

Actually learning all about DSP is useless as it's built into the radio and
I don't have to do anything.

There is much more variety in the conversations on CW than I've typically
heard on voice. The range of topics is amazing. I communicated with
retired teachers, "talked" about eBay, etc.

There is a basic ham license without code. It's called Technician. They
have all privileges on all ham segments above 30 megahertz. There are some
fine individuals doing great work in that realm. And some are even using
the 6m and 2m code band segments to work on their code so that they can pass
it to get on the HF bands.

Actually if you limit them to phone only until they learn higher
endorsements, too many will simply stay there. Allowing phone privileges
should be the treat that they get after proving themselves competent in
other areas of ham radio.

No one should look down on the newbies. We all started somewhere ourselves. I try to encourage people to move on to the next step simply for the fun of the additional frequencies and their unique characteristics. By the way, once you have your call sign, you can legally work CW on the portions of 6m and 2m that are limited to that use. You don't have to pass the CW test to work it on these band segments. This will get you some on-air practice if there is activity in your area. So once you get the basics down, give it a try. Or if activity is limited, maybe you can find an "Elmer" in your local club to work with you on a scheduled basis.

>

Yeah I tried packet for awhile but I felt the same way so chose not to continue.

For some people, they find that once having learned it, it's more fun than they guessed. It's kind of like people I know who, as adults, are glad their parents made them learn piano. They hated it as a kid but as an adult, their glad they have that ability.

Amazing rig for the price. Receiver is first-class. NP2B was running one in SS,
as were many others. With the 100W amp module they are quite a serious lil box
for under a kilobuck.

>participation is up yet line scores are out. DXCC participation is up
>but recent "How's DX?" colunms are small.

Here's why: The anticontest types say "You are using up X pages of QST to publish the results of a contest that had less than 1% of ARRL members sending in logs". (SS typically gets less than 1700 logs per mode, and ARRL membership is about 175,000). IOW, they look for percentage, not absolute numbers. Reduced particiaption only makes the anticontest folks' argument stronger.

I don't agree with that thinking at all, but they have won the day, for now.
>
>I agree with Hans that member activities belong in QST. The removal of

That makes three of us. If anything, there should be more room for Section News, not less.

Time for some different Directors, I say.

>The Diamond Club is elitist
>pap which is at odds for the ARRL's raison d'etre.

Answer: Donate money to the things that the Diamond Club is NOT shilling for.

> My ARRL contest

> chastised by these for being lazy and never being a 'real ham'.

Hi JJ,

Since I started lurking here, I decided very early on that I would not take offense at anything that anyone posts unless they were to attack me personally. After all, stereotyping is one of the ways we humans think that we can find order in, and make some sense of, what has become an increasingly complex world. So far, the personal insults have not happened (with one insignificant- and subsequently killfiled- exception). I've been made to feel welcome here, both pro-code and no-code. Thanks to all who responded to my original post to encourage and welcome me into the hobby.

Despite the heated and sometimes nasty repartee I've witnessed in the month and a half I've lurked here, I haven't been scared off of this hobby at all. A bit confused, maybe, but not scared. Hell, I don't particularly fancy being in a place where EVERYONE agrees about EVERYTHING all the time; that gets stagnant and boring real quick.

For all its inadequacies and flaws, I believe that Usenet itself is a bastion of free speech, or as free as it gets in this medium anyway. Usenet was made for argument, debate, unfair and irrational comparisons, illogic, braggadocio, posturing, imitation, blathering, crassness, poor taste, idiocy, flakiness, paranoia, etc. While I firmly believe that at least 85% of what's posted on the newsgroups is crap (not even including the spam), once in awhile I stumble across some thoughtful discourse on some topic which makes me stop and think.

We'll see how it goes in terms of where I end up in this hobby. I am so new to it that I am whatever color comes before bright green. By posting this thread, I just wanted to see where we newbies fit in with the established hams, not only on the air but also in the dank and spooky cyberdungeon that is Usenet. Really, I guess it doesn't matter much what people think of what you do in a hobby, as long as you yourself are having fun and following whatever rules are tacked on to doing that hobby. I've never had a hobby whose basic operating rules were dictated by an arm of the federal government, though, so that part of it's quite novel.

Personal observation: I think that *every* hobby that involves amassing "stuff", whether the "stuff" is radios, coins, telescopes, cars or

what-have-you-- *and* that has a significant number of aficianados devoted to furthering that hobby-- tends to have its "entrenched elders" who consider themselves to be hobby purists and who will hold to the traditions of doing things the "way they were". There is nothing wrong with that, as long as they get enjoyment out of the hobby. But there also exists alongside of the elders a new contingent of folks who're just finding the hobby, and they will generally embrace the newer trends and methods of "doing" the hobby. Not that this is always true, but I think it may well apply to this hobby because of all the new digital and microwave modes that've sprung up over the past couple of decades.

I saw this same dynamic when I was into collecting coins years ago (that hobby has the oldtimers who don't need a "professional grading service" to tell them what a coin was worth, because grading is an ART, and it was never meant to be a science) and in amateur astronomy, my other hobby, it's the ones that love the simplicity of their 35-year-old 6" Cave Newtonian reflector, and would NEVER use a "go-to" (a device which, after a few buttons are pressed, makes the telescope point at just about anything that's cool to look at in the night sky) because you're not learning the sky that way, you are *cheating!*

Believe you me, the "go-to / no go-to" debates on the astronomy newsgroups are almost as heated as the code / no-code debates here.

Sorry if I strayed off topic to illustrate my point, but those of you hams out there who are also into astronomy-- and there are quite a few of you, I know-- will know *exactly* what I'm talking about and they will see the parallels therein.

Ennaway! Time for dinner here... oh, and just in case you didn't know (because my first name can be both a male and a female name), I'm a YL. Or, is that an XYL? In any event, I'm a divorced single mom of an awesome teenaged son who has suddenly taken a keen interest in his mom's handi-talkie!

73 to all

Yes. I do have a question though- if the powers-that-be at the FCC decide that CW is no longer a requirement to upgrade from tech to general and extra, do the people who administer the tests- the VEs- have to abide by this ruling, or can the ARRL and the VEs decide they're going to require it anyway? I guess I do not completely understand how far the FCC rules reach, and how deep the ARRL's influence is in the testing process. Are they linked to one another like Siamese twins, IOW?

No.

> I guess I do not completely understand how far the FCC rules reach,
>and how deep the ARRL's influence is in the testing process. Are they linked
>to one another like Siamese twins, IOW?
>
Not at all.

FCC makes the rules and sets the requirements. ARRL is the biggest amateur
radio organization in the world, with membership of about 175,000. ARRL often
petitions the FCC, but does not make the rules. Nor does ARRL always get what
it asks for.

Amateur radio license exams are administered by the VE (volunteer examiner)
system, in which licensed hams volunteer their services to conduct the exams.
The ARRL VEC is the biggest of the VE groups, but there are others. FCC
supervises the process.

> put him on the same level you claim to be.

Still you have no clue. The people in question are the Brian Turkeys of
the world who sat and whined while the world of ham radio passed them by
because they "knew better" than anyone else what the requirements SHOULD
be.

> To you anyone who comes into the hobby and chooses not to upgrade
> to extra is just plain lazy and has no ambition in your mind.

Completely wrong still, again, yet, as always. Such is the fate of the
whineres and bitchers. Like you, Junior Junior.

Did
> it ever dawn on you that a no-code ticket may just suit the needs
> of some hams just fine?

Sure, I know several - of my freinds- who are in just that situation.
And they never b whine and bitch about the requirements for upgraded
licenses. They have no intention of facing them as "obstacles". So
what's your point, Junior Junior? Your headgear?

Junior Junior, grow up, or at least learn to read and follow along in a thread. No one except you and a few likeminded expects every participant to give a complete dissertation on his entire philosophy with each and every post. DUH!

> 7037 CW Wednesdays at 9 PM EST

For know, I have only my 10m rig up and running. This is for the well being of my 22 mo. old lad who, for reasons unknown, likes to test the effects of gravity on my gear. Luckily, nothing major has occured yet, however...

XYL has full instruction to immediately take children to in-law's QTH and await further instructions, should she come home and find a wrecked shack. All kidding aside, my lad is fascinated with the tuner and just loves spinning the dials with grape jam covered fingers. The Yaesu remains in box pending the purchase of a locking roller desk. Take care now.

Quite true.

> What I was getting it is the perception of the Technician title. In some cases
> people do not investigate Ham Radio and are swayed more by the perception that
> the actual content.

Now this was a good post, with real thinking behind it (I'm serious-not being sarcastic) Good to see that.

There are some as you say, who don't care for Technicians. (the ARS version, anyhow) Tough, I say. You shouldn't let them dictate to you what you do. Even if you don't ever use it after getting the license, the HF bands offer lot's of fun.

I didn't get interested in Ham radio until after the CW tests were changed. There was a Morse code debate going on even when I started. I could have waited until the test went away, then taken the writtens and been done with it.

But we only have so many years on this earth, and I'm willing to put up with what I need to do to get the privileges. Since I became a Ham in 1999,That has given me that many more years to enjoy the hobby.

And, after all is over but the shouting, I have learned a mode that most people won't even bother to pick up afterwards.

So some us us feel that potential hams are being cheated now, because of having to learn Morse code and taking a test for it, and some of us feel that the real cheating of hams will take place after it is gone.

Wouff Hong,

I'm not sure where you from, but that's beside the point. I read your suggestions to improve ham radio, and, as some one who is very proud of the organization they are from you wanted to let other people know your thoughts. As we both can see, it's raised a lot of havoc and questions and that sort of thing.

I must agree with you about some your suggestions, but lets look together at what you stated.

> Step 1: No more automatic renewals. Individuals must retest and
> pass all elements required for their license class.

-I feel the same way with this, because I think everyone should retest to get their driver's license every 10 years. Now we gotte realize how much a pain in the rear this would be, and not only take people away from this great hobby. It would be a good idea instead of retake tests, but to really encourage individuals bursh up on their skills, knowledge or electronic theory, etc.
>

> Step 2: The passing score for written exams needs to be raised to 90%.

-Again I agree that the level of accomplishment should be raised so people have good moral standards and treat with repect what they have their hands on when they worked hard to earn their Amateur license. 90% in manys' opinion would be to high; and it would frighten and discourage people.

> Step 3: Code elements should be 13 wpm for General, and 20 wpm for Extra.

-Morse code, a favorite of many, and not so great of many, but who is to say good or bad. Personally, and maybe others like yourself have to say that morse code is the the "basics" or any form or radio. Just because we had to take those tests when we got our licenses doesn't mean others have to. It would be a better idea to encourage people to do the morse code because if they do, I've found they stay in radio longer because if they have what it takes to learn the morse code; they'll generally apply the same learning habbit in other areas of radio. Please don't Misunderstand me, many people don't like it and are very active. But lets encourage and not say anyone has to this or that.

> Step 4: Make the no-code license one year non-renewable.

-Sounds like a good idea, but tis better to encourage people to move on and help them along the way, then bark at 'em like their bosses do.

> Step 5: Cancel your league membership until they decide to work
> to improve things.

-If league's don't have memberships, they can't support us and improve things. Memberships provide income for our leagues to improve things. We all should encourage people to join a league of some type.

> Step 6: Complain to the ARRL when-ever you hear an idiot on the air.

-Nobody is perfect in this world except God. When people who is arrogrant operate, I find out someinfo about them and kindly correct them over the phone or in some kind of private conversation. Nobody likes to be humiliated in public or at anytime. Besure anyone who does this makes sure the other person needing correction is open to it. As the cliche' goes; " A man convinced against his will, is of the same opinion still."

> Step 7: Turn in rule breakers to the FCC.

-Same as above; Nobody is perfect. Constant offenders have some challange with some one or something which some one needs to find out what the deal is and help him out with it. People just doing harm out of no reason does need to be turned in however.

Hope this helps. As you can see I mentioned the word encouraged lot because many people are guilty of this, myself included. When people are guided to the direction they want to go, they will go. There is a story that goes something like this. "The sun and the wind cloud were having a contest to see who could have a man in the park below take off his coat. So the wind cloud says he'll go first and the sun hides behind him. The wind cloud blows and blows but the man in the park just holds on to his coat tighter and tighter. The wind cloud gives up and the sun comes out and just shines his warm rays down below to the man. The man removes his coat and goes pleasantly about his business." If the moral hasn't bern figured out by an intillgent individual like yourself, it is that when someone is forced to do something, they simply won't, or they'll possibly grudingly do it. Ask and encourage someone to do something and they'll give it all they got for their best effort.

Hope this Helps,

Respectfully,
~Benjamin, KB9LFZ

Yes.

or can the ARRL and the VEs decide they're going to require it
> anyway?

Not at all. The FCC sets the requirements for licensing and all else
follows from that.
Not that the FCC necessarily does what is in the best interests of ham
radio, more likely they'll do what is in their own bests interests. Not
that they don't consider ham radio and the effect of regulations, just
that it is open to question which is most important.

I guess I do not completely understand how far the FCC rules reach,

DEEP, all the way to the ocean floor.

> and how deep the ARRL's influence is in the testing process.

That varies from time to time and era to era. I can recall when the FCC
would almost surely accept whatever the ARRL decided. Not today.

Are they linked
> to one another like Siamese twins, IOW?

No, I believe that the introduction of $$ into FCC regulation via
spectrum auctions has changed the way FCC looks at things. Then there is
the element of congressional funding and oversight, where the dollar
signs really have an impact. We can only guess what the longterm effects
of all that will have for ham radio and our spectrum allocations down
the road as spectrum becomes more valuable and scarce. We don't generate
much economic activity by comparison to any commercial spectrum-using
service. Whether or not that will have serious impact on our future is
anybody's guess.

Then you statement was correct, occasionally HF conditions can
degrade to the point that outside local area communications are
impossible with voice modes and maybe only cw will get through.
Although if conditions are bad enough to wipe out all HF chances
are even cw isn't going to get through either. Usually conditions
will be bad on certain bands while others are still usable.

> that the real cheating of hams will take place after it is gone.

I think that, in a sense, this kinda summarizes the emotional difficulties with the whole code / no-code debate. The way this green newbie sees it, it's not the actual code ITSELF that causes people to wrankle; it's the FCC's mandate that hams pass the CW test in order to gain wider HF privileges that has polarized some. Seems like the CW requirement for HD privileges is about to go away, if what I've read so far on the subject is accurate. But even if the CW requirement for increased bandwidth privileges goes aware in the near future, that doesn't mean everyone has to stop using it.

I'm not trying to play devil's advocate for either side-- now, don't flame me for thinking out loud here, but all of these possibilities have been running through my mind lately as I've read various posts here.

I'm curious why amateur radio operators aren't made to show proficiency in computer basics if they plan to do packet or digital modes. I know CW has long been a cherished part of the ARS and it is older than the ARS and that some people derive great pleasure from using it. As we add high-tech communication interfaces to the repetoire of skills available to us, why aren't we made to show proficiency at a VE test in computer skills before we go on the air via the digital modes? Maybe it's because computers and the Internet are so ubiquitous nowadays that it seems ridiculous to think that any of us who're techically savvy and eager enough to go for an amateur radio license would not know the basics of working with a PC.

So amateur bands are added and removed, and privileges on those bands certainly seem to have changed in the past couple of decades. I personally like the idea of packet radio, CW, OSCARs, the Magic Band, 2 meter popularity, digital and microwave modes and other opportunities for RF fun, not to mention the public service aspects of this whole thing, if you choose to participate in such. Perhaps CW is more of a challenge than typing on a computer keyboard... maybe just about everyone has a computer nowadays, so it's thought that computer skills don't really count... maybe CW is sufficiently difficult on any number of levels that a proficiency in CW is seen as evidence of trial by fire, or maybe not. Again, I'm just a newbie that's been looking in from the outside and free associating whilst I do. Feel free to free-associate just as I have here.

Of course I was talking about getting out side the local area. If you don't want to get outside the local area, then VHF is fine and you can do that with the introductory license. I did not say all frequencies by the way. I specifically stated shortwave (i.e. HF). However it is now apparent that I should have also specified communications outside the local area in my discussion.

> it.

I feel that whatever you find to do in this hobby- be it HF contesting, talking to your buds over a local 2 meter repeater, rare long-distance QSO's on 6 meters, or conversations via packet radio- a person should have fun with it. Who can tell you how to best enjoy your hobby? Everyone is totally free to look down on your chosen mode of fun, and some people will. You pass a test, and get some bandwidth privileges to start out- even if they are VHF+- and that's a place to start. Or stay. Whatever floats your boat. If you like what you're doing, then have fun. That's how I feel.

If I wanted to get into a strictly regimented place where others told me what to do and how to do it, I would be in boot camp. I would like to explore amateur radio as a hobby, and hobbies should be FUN. I work 50+ hours per week and my free time's precious to me-- with the little bit i have, I'd like to enjoy whatever I'm doing on that down time.

> See...the Dicks and Larrys would have a problem with that. A really big
> problem. That's where the differences with them lay.

I can't control what anyone thinks of me, nor can I contorl what tests I had to pass to get my entry level license. If anyone has a problem with the fact that I took a no-code test to gain entry into the hobby and says so, either here or on the air, I will killfile them or switch frequencies. As long as I don't get personally insulted by someone because I took a certain level of test to enter the hobby at the time that I did, I won't get incensed. If someone accuses me of being a lazy no-coder CBer wannabe, then I'll killfile them. No time for jerks, nowhere. Life's too short.

Because it is the only way I can utilize the HF bands.

Maybe I will decide that I don't like Morse and primarily use some other
mode on HF like SSB. I don't know yet.

Just curious, how do you define "Ham"? The initial capital letter seems to
have some significance?

> go on the air via the digital modes?

Once you learn to use Morse code on the air you will recognize why that
if there is to be a code qualification it will need to be tested. It's
the only mode that requires, -demands- that the user actually learn it
well enough to use it before it is available to be used. A few questions
about it on a written test just won't do the job. Any other mode can be
"winged" or learned on the fly, the book in one hand and keyboard in the
other so to speak. Not Morse code. You either can do it at some useful
level, even as a new user, or you cannot.
Computer programs can be made to send and receive Morse code but they
can't receive it nearly as well as the trained human ear and brain, and
are almost always a total bust in any serious amount of radio noise or
static which is common on HF. The result is printed garbage.
If one is going to use a computer there is little reason to use it on
Morse code unless that's just what you want to do. It would be better
utilized on some other more efficient digital mode.
The beauty of CW on ham radio is that it can be used very effectively
with the simplest equipment IF the operator is capable. And only if. And
ham radio if nearly the only remaining venue using any serious amount of
Morse today.

I really like the G4FON program for this reason.

Step 1: No more automatic renewals. Individuals must retest and
pass all elements required for their license class.

This one I actually agree with. If the statements made by certain indivuals about "growing" with the hobby and climbing the ladder of licensure are to be true, then hams should not have a problem taking a test that should be a breeze since they have "obviously" advanced within 10 years....

Step 2: The passing score for written exams needs to be raised to 90%.

Dunno about 90%, but think that 80% sounds fairly reasonable. Add more questions to the test, and choose other formats of testing other than multiple-guess too.

Step 3: Code elements should be 13 wpm for General, and 20 wpm for Extra.

See not a huge problem there, but never understood why 13 for the General. Why not 12, or 14, or ??? What is so special about the 13 wpm? Anyone know why they chose 13 for the "middle" code test?

Step 4: Make the no-code license one year non-renewable.

2 years seems like a fairer option.

Step 5: Cancel your league membership until they decide to work
to improve things.

Hmmm.... could start a whole new newsgroup on this one.........

Step 6: Complain to the ARRL when-ever you hear an idiot on the air.

They are not our governing body, nor will I ever accept them as our "governing body." It is bad enough that they have taken over the testing duties.

Step 7: Turn in rule breakers to the FCC.

DUUUHHHHH!! All should do that.... but follow proper policy/procedure when doing so. Also work towards the goal of getting the FCC to actually do something about that in the first place.

All in all, the problems people want to bitch about regarding ham radio stems back to the FCC each and every time. They make the rules/policy/procedures and they are the ones to blame. HOLD THE FCC responsible.

Actually, they should probably limit the power for the 'communicators' to less than 100W, and the higher technical licenses would allow for higher power :-). The 30MHz, I guess, is still a treaty thing, and indicative of stagnation. Maybe the 'communicators' with little technical criteria might even be limited to 10-50W at VHF and above.

The goal isn't to punish people, but to motivate people to learn how their stuff works. I suspect that the VHF bands are too full for much experimentation, but the technology for homebrew on 2GHz on up is now relatively achievable by mere mortals.

Wouldn't it be cool if people really designed/built their own stuff that makes sense to do so, rather than buying their devices from boutiques? Alot of stuff isn't really practical to build (e.g. the communicator 2M units, or walkie talkes), and the stuff that is extremely practical to build (10M transmitter) even with few mechanical skills, would be constrained by the code requirement.

So, for the newbie, where homebrew is more practical below 100MHz, the code constraints tend to continue their burden.

I look at the code requirement a little different..... If it is so important, then ALL radio services should have to pass at least the same minimum 5wpm as we do.

Hmmmm.... most US states already do that somewhere between every 2-4 years.... As well as they should too... And they also need to start testing senior citizens more often too..... (not gonna state what age they should start that at though...) I have worked a variety of accident scenes where the scene was clearly marked and using on the fire trucks to block the lane, with lights operational, pile-on orange cones, road flares etc, and a senior citizen still plowed into the firetruck. He claimed they could not see it..... Jeesh, you could see the scene from a freaking mile away!!!!!! Yeah, I am all for retesting on a fair basis.

> other areas of ham radio.
>
The limitations for those without the 'technical competence' endorsement should
probably be a reasonably low power like 20-50W on VHF/UHF and/or 100W for HF.
Phone should probably be the first mode of communication, mostly because
of the relative usefulness (e.g. during normal disasters, to help with communications,
phone will more often be useful rather than code (unless there is a WWIII)). During
urban disasters, if we are having to deal with code, the situation is probably
severe enough that ham communications ettiquete would be the least of our worries.

There certainly should be reserved areas of the HF bands for code, and those
people with/without code who haven't passed the technical criteria for the
technology endorsement, will be limited in power. Really, if someone cannot
quickly whip up a preamp/active impedance match for an HF frontend that
has to work in an area near a 50kW MW transmitter without overwhelming
intermod, then it kind of worries me about how the ham is going to competently
deal with the numerous issues of using their 500W-1kW rig. It isn't just
a matter of getting on the air, but also avoiding interference with TV (including
nowadays 8VSB), AM/FM radio, and other more important services.

People do get 'on the air', and usually do the right thing, but it is VERY SAD
that too few people build their own equipment. Of course, CBers had historically
been known to simply slap on an illegal 'linear', and their rigs sometimes worked
okay also (often with anti-social interference :-)).

Of course, my attitudes about technological competency can be mapped to
the equivalent attitudes of those who have already passed the advanced
code tests. In the normal profile of natural/terror disaster, the availability of
a radiotelephone communications mechanism would be much more useful
than if the 'HRO' only had a code rig.

Yep... overall the hobby is declining, but it is not from the testing procedures. Anything viewed worthwile by someone is worth pursuing as well as whatever obstacles along the way. The root of the problem is in the PR side. I still run into tons of people that didn't even know ham radio existed. A much smaller group associates it with CB from my own local area experiences. We need to promote the hobby more. We need to get ham radio into the schools, associate it with the cirriculums. We need to start doing things that WILL get people coming to us, to become hams. Testing sessions with a mere few testee's definitely reflects that there is a problem with promotion of the hobby. But that would take actual action by people and god forbid that eh????

Yes, that is true due the fact that the overwhelming majority of digital
modes besides packet are only used on the HF frequencies, thus requiring the
code element. Too bad there wasn't even some digital activity even at least
on 6 meters (not packet either) because at least there is equipment to get
on 6m other than FM related equipment out there.

That's a shame.... I have done that locally speaking. Its just simply a matter of how ya do it. At first, I take the attitude of "Hey Joe Smith (or whatever name), not sure if you were aware that "(wrong activity here)" is wrong, but here's a good way of doing it......." usually works the first time. Flagrant violators obviously need to be turned in though...

To back up that statement, is it not one of the "principles" to make ham radio only a part of your life, not to sacrifice other things in life, like family, employment etc?

There are some around here that eat, sleep, dream ham radio..... For me it is a part of my life, as much as family is, as much as my employment is, as my hobbies are, all small parts that make up the whole person that is known as ME! (Actually worth getting to know for those that are willing to take the time. :)

I still think that the names of the license classes should be changed to the following.....

First Class License..... Extra Class
Second Class.....Advanced Class (till they run out of currently licensed ones....)
Third Class .....General Class
Fourth Class.....Technician with code
Fifth Class.....Technician without code
Six Class.....Novice (till they run out of currently licensed ones....)

After the old novices and advanced are gone from expiration or advancement, it could be something like this:

First Class------Extra Class
Second Class---General Class
Third Class------Coded Technician
Fourth Class-----No-Coded Technician

Just a though....

I do, and so do a lot of hams that have any working electronics knowledge,
but you don't get that by simply memorizing the answers to 30 multiple
choice questions...

> Alot of stuff isn't really
> practical to build (e.g. the communicator 2M units, or walkie talkes)

My first 2 meter rig was a kit (Heathkit), as were the first pair of walkie
talkies I ever owned (Allied Radio).

>, and the stuff
> that is extremely practical to build (10M transmitter) even with few
mechanical
> skills, would be constrained by the code requirement.

The only practical 10 meter transmitter that one with limited skills
might be able to put together would be a CW transmitter, so it would be
of no use to a person that did not know code.

> So, for the newbie, where homebrew is more practical below 100MHz, the
code
> constraints tend to continue their burden.

What burden? There is nobody forcing them to become a ham. It is something
that one does because they want to do it. And according to their level of
effort and dedication to the hobby, they are rewarded with additional
operating privileges.

It could also turn out that you actually like Morse and use it in preference to other modes. That's what happened to me and many other hams. Morse is a unique mode because it's (usually) aurallly received and manually sent, but it's not a voice mode. In a world where we primarily communicate by talking and writing/typing/reading, many of us find Morse to be a refeshing and unique experience. Of course, it requires developing a bit of skill to use it well.

> I don't know yet.

Just keep an open mind.
>
>Just curious, how do you define "Ham"? The initial capital letter seems to
>have some significance?

Many of us have asked "Vshah101" that question. To everyone else I've met, "ham radio" and "amateur radio" mean exactly the same thing. Same for "hams" or "Hams" or "radio amateurs", etc. But "Vshah" seems to make some kind of unexplained distinction that is different from practically everybody else.

How is that a handout? My CSCE was for a different version of Extra
than the one you took. You claim the one you took is useless. Should
the FCC agree with you at some point in the future, they'll
restructure and make you do it again. If you can.

Didn't forget. I had studied for General written and code, but when I
got there, the written had been split into two tests. I passed them
both. Then the CSCE for the second part expired in a year.

Never could pass 13wpm. Maybe that's when they implemented Farnsworth
testing.

That's not what you asked, Dingdong. You asked how many people I
excluded from ham radio. If someone flunked the code test he excluded
himself by not learning.

That is my impression also, Bill. When I compared the two tests (an admittedly small sample) the older test would have provided no more challenge than the new one.

As a relatively new Extra, I have to note:

you have to study is a lot of questions in the pool to be prepared for the few they toss at you in the real test, This is the key to the whole process.

the letter answers are not the same as in the question pool. I cannot say this for all the questions, as I didn't memorize the letter answers, but I recognized some changes.

I took a little over a week of study in the evenings to prepare for my Extra test. Seemed about right to me.

So what would people suggest to make the tests harder?

> >
> > There already is - it's called a No-Code Tech.

Actually, the licenses say "Technician". Nothing about code or nocode
on any FCC ham license. And all US hams are allowed to use Morse code,
test or no test.

A distinction needs to be made between those who are against the code
TEST, and those who are against code USE.

> > > To work at all in the
> > > 'code' bands, you'll need to pass the code test (similar to the good old
> reserved
> > > bands for extra

WHY? There's no requirement to pass such a test today. In fact, 6 and
2 meters have the only "Morse only" segments - and they are open to
use by Techs who haven't passed a code test.

> > Let's just keep it simple. To work any band / mode below 30 mhz. you need a
> > higher class license (oops, that's how it is now... :>)
> >
> Actually, they should probably limit the power for the 'communicators' to less than 100W,
> and the higher technical licenses would allow for higher power :-).

Probably a good idea, because then the RF exposure questions on the
entry-level tests could be tailored to the power levels permitted.

> The 30MHz, I guess,
> is still a treaty thing, and indicative of stagnation.

Nope. It's simply a treaty requirement. Once upon a time the
requirement was for all ham licenses. Over the years an exception has
been included for VHF/UHF because there is relatively little routine
use of Morse by hams on VHF/UHF. The limit has gradually been lowered
at various WRC conferences - 1000 MHz, 144 MHz, 30 MHz. Next year it
will probably go to 0 Hz ;-)

Before judging whether "code is dead" or "obsolete/outdated/nobody
uses it anymore", try actually LISTENING to the ham bands below 30 MHz
- particularly the lower ends of the bands, where Morse use is most
common.

This weekend would be a good time to listen.

> Maybe the 'communicators' with
> little technical criteria might even be limited to 10-50W at VHF and above.

Sure.
>
> The goal isn't to punish people, but to motivate people to learn how their stuff works. I

Plenty of room on all bands for experimentation.
>
> Wouldn't it be cool if people really designed/built their own stuff that

> skills, would be constrained by the code requirement.
>
> So, for the newbie, where homebrew is more practical below 100MHz, the code
> constraints tend to continue their burden.

How does the requirement to learn code at 5 wpm just well enough to
pass a test unreasonably constrain the ability to build radio
equipment? Hams have been building rigs long before there were
licenses without code tests. Heck, I built my first transmitter at age
13 - right after I passed the code test. That was not at all unusual
in 1967.

The REAL "burdens" of home design and construction today are the
practical and economic constraints. Manufactured ham gear, and kits,
are inexpensive and plentiful today. What sort of projects would you
recommend for the raw newbie?
Do you think it's practical for a new ham without an extensive
electronics background to design and build an HF SSB transceiver as a
first project?

>I see you jumped right on the coattails of NCI when you got yours.

You give NCI way to much credit, the FCC was going to do it with or without NCI.

No I didnt jump on the EXTRA when they Dumbed it Down. The only reason I did it was to show a couple of No-Codes how stupid they were, an to take $250 from them. I was more than Happy with the Advanced,and had no desire to upgrade. I still to this day have not used the Extra Privilages, and probably never will.

I dunno about the K1, but the K2 is simply amazing. Digs right down to
the noise, unaffected by lots of strong inband signals, lots of
performance and usable features.

But it's an "electropolitically incorrect" design, at least according
to what is normally done in "modern" ham rigs. Not general coverage.
Designed for performance first, features second. CW is primary, SSB is
an add-on (which costs less than most mfr's optional filters). No
upconversion to VHF, no DDS or DSP, no passband tuning. Yet it drags
in the weak ones - often when other rigs can't.

I financed my K2 and options by selling of some of the spare parts
I've amassed in 35+ years. Funny - stuff that folks practically gave
away is now worth something. "It's you or the dumpster, kid" - and I
was the kid.

> > Do you read the Elecraft reflector?

One advantage of older gear was that it was too big and heavy for the harmonics to move. Also another reason why I always favored a basement shack.

I remember a photo in an old QST of a ham whose shack was in a closet. Took out the clothes rod and shelf, put in a shelf at desk height and another higher up for books, tuner and accessories. Open line came in through the ceiling, dropped straight down to the tuner. Inside walls and door were covered with QSLs and certificates, light was under the upper shelf. Really slick and compact setup, at a time when ham gear was neither compact nor lightweight. Open the door, pull up a chair, and operate.

Of course the real miracle is having a spare closet to begin with!

In article <3DDD5992.20F79734@mailcity.net>, JJ <radiobuff@mailcity.net>
writes:

>You and newbie larry have stated over and over your disdain for
>those who come into the hobby via the no-code route.

JJ:

If there is any disdain ever expressed in this newsgroup, it is from
NCTA's such as your self who hate the thought of anyone having an
opinion which differs from your own with regard to code testing. This
is the classic pattern of thought among those who occupy a politically
liberal point of view.

>You and larry
>even claim that hams licensed now under what you call the dumb
>down requirements with the 5wpm code upgrade to any class, can
>never achieve the lofty status that you and larry have, because,
>as you claim, the test were harder when you got your ticket, and
>you had to pass 20 wpm to get your extra.

You are also humor-challenged, and don't recognize well-deserved
sarcasm when it is applied to a given situation. When I make such
statements, it is always in response to some NCTA who provoked
it, and basically "had it coming." Most people don't require this to
be explained to them, but you and Brian seem to be notable
exceptions.

>Therefore no ham today
>can ever be a 'real ham' in your way of thinking, so no matter if
>Jackie does go on to upgrade to extra, you and larry will never
>put him on the same level you claim to be.

I have often stated that it is possible for someone to be a "real
ham" without ever learning the difference between a "dit" and a
"dah." All I require is that they know what they are talking about
when the speak of code testing requirements, and, IMHO, those
who have never bothered to learn the code at a useful proficiency
level have not earned that right. There are several "real hams"
in this newsgroup who HAVE passed the previous code tests
up to 20 WPM, and who do not support code testing -- but they
have not gone out of their way to whine and complain about
their existence, or of the differing opinions of those who disagree.

>To you anyone who comes into the hobby and chooses not to upgrade
>to extra is just plain lazy and has no ambition in your mind.

And, for the most part, this is precisely the case. It takes little or no effort to pick up a microphone and start talking -- and this is the objective of those who oppose code testing.

>Did
>it ever dawn on you that a no-code ticket may just suit the needs
>of some hams just fine?

I know many for which this is true, and we co-exist as fellow hams quite well. However, they aren't making it a point to denounce those of us who support code testing requirements. They just accept things for the way they are.

Keep one thing in mind, JJ -- the code testing debate was started by those on the No Code Test Agenda making preposterous statements blaming those of us who are of the Pro Code Test Agenda of all sorts of crimes against humanity. The hyperbole, and the acrimony, was started by those on YOUR side of the fence. We (the PCTA's) just simply responded -- sometimes giving back as we've received. This is a fair fight. However, it is up to the side that started it to put it to an end.

>That maybe some have no desires to upgrade
>just to get HF privileges? That does not make them any less of a
>ham that the holder of and extra.

And nobody on the PCTA side has made any such claim, except for a few loose cannons such as WA8ULX.

>Your are the kind of ham that is a problem, the kind that thinks
>that no one coming into the hobby under today's standards can ever
>achieve your imagined lofty status.

Pre-Restructuring Extra's like Dick and myself were licensed under a more challenging and comprehensive set of requirements, therefore, we do possess a higher "status" among our fellow hams extant. Now, I, for one, don't go around saying that anywhere but in this newsgroup, and mainly for the entertainment value of responding in kind to preposterous criticisms made by NCTA's such as yourself. It may be a fact that today's Post-Restructuring Extras are not equal to me in knowledge and experience even though they legitimately possess equal privileges. However, I have to live with that fact, and I do. I accept the fact that there are hams, of all license classes, who possess far superior technical skills than I do, usually because they are employed as professional electronics engineers and technicians. The problem is, the new, dumbed-down hams, with no operating experience and no communications skills beyond the ability to coordinate the action of a PTT switch with their voices, won't accept the truth of their status, and insist on politically-correct "equality" in spite of the facts. This is why it is best for *them* to keep mum on the subject, lest they incite a debate they won't want to finish, because the truth of the matter will be spoken in it's course.

You are the one who expresses disdain in the group larry, you are
the one
who hates the thought of any opinion different than yours. Your
attitude for
those licensed under the current rules is very clear. Here are
your exact
words again.
:There are no more Real Ham(tm) licenses. Only dumbed-down,
slow-code,
:fake Ham Wannabe licenses. The last Real Ham(tm) (General or
above)
:was licensed on April 14, 2000.

I have never said I was opposed to code testing, if you think I
did, then show my
post that said so.

Here are your exact words again, maybe if you read them enough
times you will
understand what you wrote.
:There are no more Real Ham(tm) licenses. Only dumbed-down,
slow-code,
:fake Ham Wannabe licenses. The last Real Ham(tm) (General or
above)
:was licensed on April 14, 2000.

>There are several "real hams"
> in this newsgroup who HAVE passed the previous code tests
> up to 20 WPM, and who do not support code testing -- but they
> have not gone out of their way to whine and complain about
> their existence, or of the differing opinions of those who disagree.

See, according to you to be a 'real ham' they have to had passed
the 20wpm
test like you.

>
> >To you anyone who comes into the hobby and chooses not to upgrade
> >to extra is just plain lazy and has no ambition in your mind.
>
> And, for the most part, this is precisely the case. It takes little or
> no effort to pick up a microphone and start talking -- and this is
> the objective of those who oppose code testing.

Not everyone wants to be an extra class larry, I see you only have
a B.S degree,
why did you not get a Ph.D.? Just to lazy I guess. Oh, I know,
that B.S. degree is
fits you just fine as most of the stuff you spout is just that BS.

>
> >Did
> >it ever dawn on you that a no-code ticket may just suit the needs
> >of some hams just fine?

>
> I know many for which this is true, and we co-exist as fellow hams

> giving back as we've received. This is a fair fight. However, it
> is up to the side that started it to put it to an end.
>
> >That maybe some have no desires to upgrade
> >just to get HF privileges? That does not make them any less of a
> >ham that the holder of and extra.
>
> And nobody on the PCTA side has made any such claim, except
> for a few loose cannons such as WA8ULX.

Oh, and again your words.
:There are no more Real Ham(tm) licenses. Only dumbed-down,
slow-code,
:fake Ham Wannabe licenses. The last Real Ham(tm) (General or
above)
:was licensed on April 14, 2000.
>
> >Your are the kind of ham that is a problem, the kind that thinks
> >that no one coming into the hobby under today's standards can ever
> >achieve your imagined lofty status.
>
> Pre-Restructuring Extra's like Dick and myself were licensed
> under a more challenging and comprehensive set of requirements,
> therefore, we do possess a higher "status" among our fellow hams
> extant.

Well, there is that elitist status attitude again. Just because
the
current licensees do not have to pass the 20 wpm code test and
pass
the same written exams you and dickie did, then they can never
reach

your lofty status and be 'real hams'. As your degree states, BS!

> It may be a fact that today's Post-Restructuring
> Extras are not equal to me in knowledge and experience even
> though they legitimately possess equal privileges.
> However,
> I have to live with that fact, and I do.

Oh poor thing, have to live with the fact that the current
licensees
can obtain the lofty extra status with out all the rigorous
testing
you went through. That must really be a tough thing to deal with.

> I accept the fact that there
> are hams, of all license classes, who possess far superior
> technical skills than I do, usually because they are employed as
> professional electronics engineers and technicians. The problem
> is, the new, dumbed-down hams,

See, any new ham is simply dumbed-down, no matter how much
knowledge
or skills they may possess. Your exact words again.
:There are no more Real Ham(tm) licenses. Only dumbed-down,
slow-code,
:fake Ham Wannabe licenses. The last Real Ham(tm) (General or
above)
:was licensed on April 14, 2000.

All hams licensed under the new standards, in your exact words
are "fake Ham Wannabe licenses."

> with no operating experience

I guess you started out with tons of operating experience.

> and no communications skills beyond the ability to coordinate the
> action of a PTT switch with their voices, won't accept the truth of
> their status,

And there it is again, just because someone chooses not to use cw
means
they are just a much lower status than you. More BS.

> and insist on politically-correct "equality" in spite of
> the facts.

Hey, larry, hate to burst you bubble again, but just because a ham
chooses
not to operate cw does not make them a lesser ham than you. Get
over it.

> This is why it is best for *them* to keep mum on the
> subject, lest they incite a debate they won't want to finish, because

> the truth of the matter will be spoken in it's course.

So any ham that choose not to use cw is not worthy to speak on the subject
as you, dickie and brucie, pure BS.

Spin it anyway you want larry, but you hold nothing but disdain for any ham
that did not get licensed under the same requirements you did. You hold yourself
in much higher regard that them and according to you they can never achieve your,
dickie's, and wa8lux's (I know it is really ulx brucie so don't get your shorts in
a wad), lofty bloated status.

Still claim you first coined the term "real ham" on Fideonet some 10 years ago? Maybe
you should go after those using your trademark.

Actually the term YL (Young Lady) applies to any female unmarried
ham of any age. The term XYL, applies to any female married ham of
any age. The term OM (Old Man) applies to any male ham of any age.

>> phone of course. I haven't looked at the band plan to see if you're
>> referencing a CW freq.
>>
>> Anyway, let me know.
>>
>> Kim W5TIT

To which, Dick patiently replied:

> Well there you have it. From a *real* ham.

Well, only in her own mind, Dick. First of all, Kim is a Tech Plus. She
doesn't HAVE any privileges at 7.037 MHz, in any mode. Second,
what's scary is that she didn't know that. I wonder how many Tech
Pluses are happily jabbering away in the CW/DATA portions of the
HF bands?

While looking up Kim's record on QRZ.COM to verify her license class,
I was most impressed to see she had, at that moment, 1120 lookups!
Two of the most prolific DX'ers I know are averaging 365 each. I've
worked everyone there is on 20-meter CW and PSK31 and only have
330. Seems like Kim's call sign has yielded her way more than her
allotted 15 minutes of fame!

: And according to their level of effort and dedication to the hobby,
: they are rewarded with additional operating privileges.

Nope, has nothing to do with "effort and dedication".

Hang around here long enough, and you will see someone write
something like:

" A really tough written test would surely separate those
who really have an interest in the hobby.", or..

" Other, more relevant, methods can establish an applicant's
dedication to the service.", or..

" I think it is effective at minimizing the undesirables.",
or..

" ..... the key to maintaining the quality of hamming is
making it something to work for.", or..
.
"My opinion is that any obstacle you put in the way to any
achievement guarantees that only those with dedication and
strong interest will get there."

All of the above quotations, gathered from recent threads, were
made by serious and well-intentioned licensees who want the best
for the Amateur Radio Service.

All of the above quotations also completely miss the mark, in
that they suggest that the examination process is the key to
ensuring that "the right kind of people" (those who are
"worthy") become licensed and, by extension, that "the wrong
kind of people" get filtered out.

First, the testing procedure is an "entrance" exam, not a
"graduation" exam.

Second, while "interest", "dedication", and "hard work" might
be hallmarks of good amateurs, the FCC and ITU regulations

do not specify levels of interest, dedication, hard work or other measures of "worthiness" as requisites for a license. Therefore it is not the function of the examination process to determine (even if it could) if an applicant is "worthy" but rather to determine if he/she is QUALIFIED to use the spectrum assigned. There should be no "dumbing down", but neither can there be a requirement that the examination process screens out applicants who lack "commitment".

Don't get me wrong here, folks. I believe that the examination process ought to be rigorous enough to determine proper knowledge and skills so that a new licensee does not inadvertently trash the bands, hurt themselves, or harm other users/uses of the spectrum. I am not even suggesting that Morse testing is a "good thing" or a "poor idea". But I have no expectation that ANY examination can filter out "unworthy" applicants who lack the proper dedication or motivation.

Even if it could, who then would become the arbiter of "worthy"?

Folks:

It was 34 years ago today (Nov.22, 1968) that the first phase of rules changes known as "Incentive Licensing" became effective. Exactly one year later, the second phase became effective.

It was a Friday in 1968, too. I had a brand new Advanced at age 14, and suddenly lost full privileges. No big deal, got 'em back in 1970 after the waiting period for Extra was up.

The code test debates of the past few years are minor compared to the fury of those days...

>forget already?
>
Here's another:

Just about 50 years ago (December, 1952) FCC decided that its 1951
restructuring was a bad idea, and gave all amateur operating privileges to
Generals, Advanceds, Extras and Conditionals (effective February 1953). There
were about 40,000 Advanceds back then, and about 3,000 Extras, who suddenly
found that their hard-earned licenses conveyed no more operating privileges
than the much easier to get General or Conditional.

Until 15 years later, when FCC changed its mind once again, and having an Extra
or Advanced suddenly made a big difference in HF operating privileges.

Uh.....I don't think so. Perhaps I missed something but the only Advanced tickets were refered to 'Class A'. And they were not being issued at that time. If you had an advanced you kept it.

Novice, 1 year non-renawable.
Technician, 5 wpm and the General test.
General, 13 wpm and the same test.
Extra, 20 wpm and a tough test.

I was General and lost most of my HF privlidges. The Generals are the ones that got screwed.

Besides, it's the Advanced and extras that cause the majority of deliberate rules violations. A tech or General might mess up, but an extra knows better and does it anyway. And how much effort should you have to put into a hobby?? Do the CW worshippers and "I hadto take a REAL test" guys have a life other than radio and are they still working? A lot of them are retired, sick and seem like they resent any changes because a new ham might not have to "go through what they did". I'm not married, but I have a full time job, other hobbies and interests, friends, pets, etc. How much of those do I have to ignore/abandon to be "worthy" to them?

A lot of people get turned off just by listening to some of the nonsense that goes on the air, and some get turned off after they get a no code ticket, and are ignored, trashed, ridiculed, talked over, etc by older hams, almost always of 20+ years experience, and almost always they seem to be Extras. If anyone should have their "plug pulled", it should be these guys. They have no excuses. The most local incident I can remember was when several hams in Detroit purposely interfered with anyone who tried to use the repeater having a call issued after the NO code was introed. This went on for some time, then they must have gotten some kind of warning, since it just suddenly stopped. AS a victim of these guys, I think something more should have been done. Andyes, I did make a complaint, complete with tapes of their nonsense.

BDK, no more CW for me, finally, it's over..

> mine on the subject of CW radiosport.

Par for the course. Although claiming that he's only against the morse test, his posts indicate wide ranging hatred for the mode, as well. Plus the ARRL, young people who become licensed, people in the health care professions, easterners, midwesterners, hams with 1x2 callsigns/Extra class licenses, and a host of others. Particularly those who point out errors in his information, such as noting that Amazon.com isn't a profitable company. Etc.

Here's a novel idea. Let's have Extra band segments, Newbie band
segments, no-code band segments, code-only band segments and a
Dont-even-bother-with-getting-a-license segment.

Oh wait...we already have that.

The only way this could happen to a no code tech is on a repeater (unless
he is operating out of class on another band - and then he *should* be
ignored or otherwise enticed to cease transmitting).

But basing you opinions on a very limited segment of the hobby (repeaters)
is very misleading. Repeaters (especially in larger metro areas) are often
abused by all license classes, and many "old timers" think of them as
something akin to licensed CB anyway. Try working simplex or SSB instead,
you'll find a very different group of hams.

In this day and age, requiring folks to do code is
pure bullshit. Do we ask computer science majors to
write code in assembly language or know DOS?

HELL NO!

Unfortunately, the ham radio community is so far behind
the times that these guys don't even know what day it is.

Give your favorite ham radio operator a dixie cup and
string, b/c that's where he or she is from a technological
point of view.

The ham radio community will continue to shrink unless
it gets its collective heads out of its asses.

Hey guys, it is 2002

I don't know what anyone else thinks, but I have a piece of paper which says I'm a Technician, which means I'm a ham. If someone wants to pick apart the true definition of the term "ham" and give me reasons why they think I'm not one, or if someone terms me a "CBplusser" or some other derogatory term, that shows how willfully ignorant they are... i'ts just troll-bait, and I ain't biting. I'm a real ham because the FCC license says "amateur radio license" on it, and my name and callsign are printed there. If someone begs to differ and call me names, then I will see nothing further of their posts as theirs will go directly to my killfile from then on.

I'm always up for rational, spirited debate on the issues, but I'm never up for having to defend myself against baseless personal insults. I know that people like Bruce are probably just tossing out the crap for their own amusement. That's fine, I hope he finds it amusing when no one takes him seriously or addresses his posts anymore.

: I agree totally Hans.
:
: Dan/W4NTI

I am convinced that incentive licensing remains the hands down all time winner of the DAIOTC (Dumb Assed Idea of The Century) award.

When a lot of us got started in the hobby the bands were not subdivided like they are today and it seems that we all, regardless of license class, worked together to improve the Amateur Radio Service.

34 years later we are still sliced and diced into 6 different classes, carefully divided into our own special frequency segments, and Lord protect the Extra who suggests that a new Technician might have something to contribute to our beloved Amateur Radio service.

Back then, it seems that we all, regardless of license class, worked together to improve the Amateur Radio Service.

Back then, nobody got a special deal because they could beep faster or remember more electrical formulae than someone else. I got my Extra in 1964, well before disincentive licensing, and it was simply just another personal accomplishment, and did not "elevate" me above other hams. We all shared the same spectrum, worked together to solve the same problems, competed in contests, trouble-shot each others radios, and generally had fun together. If you forgot the numbers for the dipole formula, it was OK to ask someone else. If your Morse speed was < 10WPM the speedier guys would slow down for you, not QSY to some specially reserved band segment. The one or two "old timers" on 75 meters who didn't like newcomers ("No lids, no kids, not space cadets") were universally looked down on as poor examples of what a ham ought to act like. The Novice bands were a "cacophony of exuberance" to steal a term that K1ZZ used in a meeting here in Minneapolis. Old hands were on those Novice bands also -- it was not unusual to hear W4KFC or W5ZD patiently working WN4KKN or WV2CNL -- nobody remarked that it was "nice" of them to do that -- it was just part of being a good ham. The notion that you had earned a special band segment never occurred to anyone -- we were just

excitedly "playing in the ether", and there was no distinction on the air between Extra, Advanced, General, or Conditional -- elitist special callsign formats to celebrate the fine granulations of your test taking/memorization skills had not been invented.

We'll never return to 'back then', unfortunately.

This is so unoriginal.

There is a choice. One can participate in a variety of interesting activities that do not involve code. For example: Homebrewing, radio direction finding, troubleshooting equipment, test equipment operation. None of these activities are for CBrs.

Your statement limits Hams to CW operation only. That only makes you a CBer that knows Morse code.

Lets change the scenario:
Lets make the test non-question pool, so its a little challenging.
Then lets get rid of the code requirement for General class.
Then lets add a new reduced license class called the Operator class, that covers operation, regulations, safety, but not practical circuits.

I''ll bet that many code advocates would end up at the Operator class than the Extra class under these requiremens. Then, you will see the real "Truth".

> forget already?

The example has no relavence. The Extra is the highest license
available. For something akin to the tech example to arise
would suggest a new, higher than Extra, license might be
proposed by the FCC AND that new license would somehow
make a distinction as to credit for Extra based on some past change
to the Extra itself.

What's the odds on that?

Cheers,
Bill K2UNK

But the license itself stood on its own merits...it made no difference
when the advanced or extra had previously been passed.

I and others have suggested expanding the variable pool
for any question invlving use of a formula to avoid any
memorization being done for those questions.

I also agree that some tests should be sub-scored so a
passing grade is needed for certain topic areas (e.g. safety, regulations,
theory, etc.)

Yeah, it was on 2 meters. This doesn't happen a lot like it did back 10
years ago, but it still happens, and it's always veteran hams that do it,
not no code techs or anyone recently licensed.
>

I've had two, a Novice 30 years ago, and one of them hated No code techs since 91, and I won't post them here, for various reasons. I'm sure you'll trash me, but I have good reason not to. But I did the 5 WPM CW thing already, and maybe I'll upgrade one of these days, but it doesn't have the draw it did ten years ago. Too bad...

>
>And I bet the No-Code CBplussers would end up, back on CB where they belong.

So, the Coders make an effort to learn the material? This has not been my experience at the Ham Radio clubs I have been to. Also, you are assuming that all No-coders want HF privileges, not the license.

The "Only" Coders know they don't actually have to learn the material so the just fall back on the question pool format, sit at a one day "license in a day" class and pass the exam in one day.
These coders don't care about the written material. But, since its so easy to pass these exams, they figure "why not?".

I am not a CBplusser. I feel that the time it would take me to learn code, I could learn alot of the technical material. I believe this would be much more useful to me and to Amateur Radio.
I would upgrade if the code requirement was eliminated. I believe many others would too.

There is no reason why a "new user" of code could not start on the air
at one or two wpm using a lookup table.

If two hams want to "try" learning morse via on-the-air QSO,
what's wrong with that?

Heck, why doesn't the ARRL start out their "slow code" transmission
sessions with something less than 5 wpm?

Cheers,
Bill K2UNK

1714. Re: 7 steps to improve ham radio.

Newsgroup: rec.radio.amateur.policy
Date: 2002-11-23 00:14:10 UTC

Source record: 55993

Steps to better Amateur Radio
1. Get rid of the word "Ham"
2. Get rid of excess codewords.
3. Discourage cults such as Wouff Hong
4. Encourage Amateurs to not have their lives revolve around "Hamming".
5. Encourage Amateurs to lose weight.
6. Get more females, young people into Amateur radio.

7. Get rid of QST and bring back Ham Radio magazine
(but change the name to Amateur Radio magazine).
8. Get more people involved in: Homebrewing, radio direction finding,
troubleshooting, use of test equipment, antenna building.

9. Positive publicity - positive publicity spots in newspapers, etc.
Endorsements by celebrities, Amateur radio in movies.
10. More clout with politicians.
11. Stress educational benefits, such as geography, etc.
12. Collaboration with EE education and IEEE, not separation from them.
13. Real development activities through Amateur radio clubs.
14. Real tests of viability of certain modes by getting large numbers of people
to test them.
(Could be done in a contest).

15. Get rid of the Morse code requirement.
16. Encourage an adequate number of coders - but don't tie this to the license
classes.
17. Morse certificate for 5 wpm, Morse with distinction for 13wpm

18. Real license preparation classes to understand the material.
19. Non-question pool format for written tests.
20. Call the license classes Novice, Intermediate, Advanced instead of
Technician, General, Extra
(Clearer terminology and more respectful of achievement).
21. Simpler "Operator" class that does not include practical circuits.
(I bet with a more difficult test, many coders will end up here instead
of Extras).

22. Real Emergency communications training,
(must demonstrate on actual equipment), instead of just written test.
23. Field day preparation meetings so everyone can do their best on field day.

24. More real skill building activities
25. New awards. Instead of WAS and other volume based awards, recognition for
WAB(Worked All Bands), Distance awards, station setup time awards, etc.

So, in effect, you have never experienced anything beyond basic entry level operation? That's not much scope of experience to be basing such a negative view of the hobby on.

Since you claim to have passed the 5 WPM element in the past, all you have to do is show proof of it to the examiner when you take your General (or higher) written element and you will have your HF ticket. Isn't that what you wanted, elevated privileges without having to take the code test?

<w4nti@NOSPAMmindspring.com> writes:

>Uh.....I don't think so.

Don't think so about what, Dan?

>Perhaps I missed something but the only Advanced
>tickets were refered to 'Class A'.

Before the 1951, there were three classes of US ham license:

Class A was full privs. 13 wpm send and receive, 1 year experience as a B or C, tough written test at FCC offices only

Class B was full privs except no 'phone privs on the ham bands between 3 and 25 MHz. 13 wpm, serious written test.

Class C same as Class B except given by mail.

In 1951, Class A was renamed Advanced, Class B was renamed General, and Class C was renamed General. Three new classes (Novice, Technician and Extra) were added.

>And they were not being issued at that
>time. If you had an advanced you kept it.

FCC closed out Advanced to new issues on December 31, 1952. Then on November 22, 1967, they reopened Advanced to new issues. In '67 the Novice term became two years. But Novice stayed nonrenewable and nonretakeable.

I had one of the first two-year Novices, issued October 12, 1967. I took the Advanced in the summer of 1968 and had full privs for a few weeks betwen when the license arrived and Nov. 22, 1968.
>
>Novice, 1 year non-renawable.
>Technician, 5 wpm and the General test.
>General, 13 wpm and the same test.
>Extra, 20 wpm and a tough test.

That was the system from 1953 until 1967. Some call the reopneing of Advanced and the two-year Novice the "first phase" of Incentive Licensing, but nobody lost privileges in those changes. Only after Nov 22, 1968.
>
>I was General and lost most of my HF privlidges.

"Most"? You lost 25 kHz at the bottom of the 80/40/20/15 CW/digital segments and about half of the 80/40/20/15 'phone segments.

>The Generals are the ones
>that got screwed.

Advanceds lost too, but not as much. And those who had the 2 years experience could get Extras right away, while us newbies had to wait until we had the time. I was at the FCC office on the first day when I coudl legally take the Extra, and passed it on the first try.

See AC6V's site if you don't believe me, my history, or the QST accounts of the rules changes.

I was there.

Machine code is the lowest level code, when you write in machine
language you are coding directly in the language the machine
understands. An example of a high level language is BASIC which is
written using English, such as GOTO, IF, THEN, LET A = B, PRINT,
ect. The high level language either uses an interpreter, which
converts the high level code to machine language on the fly, or it
is compiled which converts the high level code to machine language
in an executable file (.exe).

Must be the ham equivalent of a pool hustler. Only works once, though.
Once you pass the extra on that bet, you can never untake the extra.
Unless you let the license lapse beyond the grace period....

I don't know what HR does in most companies, but in the electrical
engineering field they do little more than file forms and push paperwork.
Engineering managers pick out who to hire and who to can, who
gets how much of a raise, and other things where they decide what
to do. HR just does the paperwork to make it happen. So it would
be a boring job that didn't even pay as much as what Larry is getting
as a paratransit bus driver. So why should he quit the bus job?

Thats a given, thats how all you CBplussers got here in the first place. But as usual you want more dumbing down to occur, just so you can upgrade.

One of the biggest justifications for Ham radio licensing is
for emergency operations. It is MUCH MUCH more likely for
radiotelephone to be of immediate use (other than post-WWIII situations)
than code.

Code should be encouraged for those who like that medium, but
technical competency is much more important in general (esp for
high power operation.)

If you use your Advanced privileges, all you'd need to do is dial down a little
lower from 14.176 to 14.155 MHz and you'd be using your Extra. It all
sounds the same on SSB. On CW, there may be faster code going on in
the extra sections, but I haven't looked lately.

Lots of NCT's like fm simplex as much as the next guy. Some even use
other modes such as SSB, packet, and even CW. Why must the rudeness
only take place on repeaters? Have you never been to a club meeting
where it takes place in person?

> But basing you opinions on a very limited segment of the hobby (repeaters)

Your comments are very limited and misleading. I've heard noisy
elitists at the Dayton Hamvention where they don't care who they
offend.

> > If anyone should have their "plug pulled", it should be

Limited again. But a hotspot of rudeness. I witnessed a 2by2 with
the first name Curtis berating a new ham's first QSO on the air - on a
St Louis repeater. Apalling.

I don't believe that. Both the General Exam and Technician exams use question pools and are very easy.

The Only Coders like the current tests because they can get the Gereral licence with not much more effort.

>>I would upgrade if the code requirement was eliminated. I believe many
>others
>>would too.
>Thats a given, thats how all you CBplussers got here in the first place. But
>as
>usual you want more dumbing down to occur, just so you can upgrade.

Are you calling ME a CBplusser? Thats generalizing. Perhaps learning Morse code at the exclusion of the material is the dumbing down of Amateur Radio.

You made the claim that No-coders are CBplussers. Your claim was just an accusation. So, I can make a similar claim: Perhaps many of the "Only" Coders want HF, but don't want to learn the material.

Lets repeat my challenge again.Lets make the test non-question pool, so its a little challenging and no longer nontrivial. Then lets get rid of the code requirement for General class.

The result is that many "only" coders will not upgrade since it will takes some effort, when currently it is a trivial amount of extra effort.

Then lets see how many "only" coders become Extras.

>Extra
>> or Advanced suddenly made a big difference in HF operating privileges.
>
>But the license itself stood on its own merits...it made no difference
>when the advanced or extra had previously been passed.
>
That's true, Bill. But the main point is that for more than 15 years there was
no difference in privs between an Advanced and a General, and then all of a
sudden it made a difference.

Another point: Before the Great Giveaway of December 1952, it took an Advanced
or Extra for full privs. But when IL was reinstated 34 years ago today, only an
Extra got full privs.

What really matters, though, is what you expressed in another post: What are
the chances the FCC will make any sort of distinction in the future? I'd say:
Very slim to none.

Sure, I used to be a ham... (probably before alot of these readers
where born.) Had the code and everything. Additionally,
the rules and regulations were easy... The technical part was trivial
(even as a highschooler, I didn't have to study that.) Sure, my First
Phone was a little more difficult, but still technically easy (the rules and regulations
were much more difficult.) I also had NO BENEFIT of tutoring, but
simply learn and understand very quickly (still do.) There is NO EXCUSE
for IRRESPONSIBLY avoiding the demand of technical competency,
because it is the tool used to support responsible behavior on the
shared airwaves.

Learning an anachronistic and rather less useful skill, like code is mostly
a waste of a newbies time (unless they *want* to use code.) For
typical emergency situations (nowadays), radiotelephone will be much
more useful. Trying to be elitist based upon an anachronism, has mostly
the effect of creating an exclusive club and creating a barrier in the wrong
place. If anything, the barrier MUST be on the basis of being able to
operate competently (including technical competency.)

It is good that code has been dropped on the above HF frequencies, but
even HF rules could stand some revisiting by the international organizations.

For those who claim that I might need to learn something, it would be
good to learn some respect for those who have 'been there, done that.' I
do have some problems with certain fine motor skills. The problem isnt'
any better since I was young. It isn't a handicap, but the anachronism
and simple waste of time for any operation that I would be interested in
is a serious disincentive (rather than the appropriate disincentive against
technical incompetency.)

It was good to hear that ham radio is starting to realize that they need
to look towards the future, rather than try to create a false elitism based

upon an anachronistic skill. If the elitism is based upon a currently (or future) strongly useful expertise, then there is some value. Ham radio does need to continue to self-police, but also appear to be friendly.

John

Ever try sorting through a few hundred pages of a 'core dump'
(raise you hand if you know what a core dump is) deciphering the
instructions to find out why a program had an abend (abnormal
end)? At least it printed out in hex.

Nope, never will. Sad part is that for those of us who were
in the hobby "back then," can clearly recall when this was truly
a gentleman's hobby, practiced by gentlemen and men of technical
expertise. I can even remember attending ham radio functions in
a suit, standard attire for gentlemen. As you say, we'll never
return to "back then."

Good example: I wrote/re-wrote a significant amount of FreeBSD (the VM
code and other pieces.) Without knowing and being able to use assembly
or machine code, it would be a severe handicap for some groups of programmers.
However, there is usually an intimate relationship between machine code
and the code produced by high level languages. Understanding this relationship
and being able to exploit it can sometimes help to improve system performance.

Of course, technical knowhow, and the ability to solve communications
problems (e.g. interference, path loss issues, reliability), are MUCH MORE
important nowadays to render code to be a quaint curiosity.

I don't know where you've been, but there are people using assembly language today (2002). And it is for major companies, and leading edge products. Not all programming is Java and OO. Don't assume that one specific method of programming/language useless until you understand the reason for using it.

Also, don't assume that one method for transmission is inappropriate for all communications. Some operators prefer voice, some prefer code, that is their choice.

Code can be thought of as a requirement so that operators have sufficient breadth in their understanding of radio communication. Isn't testing about comprehension and proficiency. These result in the privilege to operate a radio.

(I wouldn't hire a programmer that doesn't know assembly.)

To me it is clear that code is a viable part of the hobby. When I no longer hear code in the HF bands, I may consider it to be obsolete. Since people are using it today (2002) it clearly isn't obsolete.

On the other hand arguing about this is rather pointless.

I'm far from a computer guru, but aren't all high level computer languages written in assembly/machine code? Aren't they all just basically interfaces between the processor (machine language) and the operator??

And the 64K of core memory took up more space than several of
today's PC units. 512K additional memory for an IBM Model 50 CPU
came in a box the size of about three refrigerators side by side.

With hydraulics driving the R/W heads back and forth. A head crash
was not a pretty sight.

Yes, it was on the front page of the ARRL Bulletin along with your scheduled receipt of the Presidential Medal of Freedom for extraordinary accomplishments in the antique radio-telegraphy service using only your own designed and built radio equipment.

So, please tell us how much you are getting for design and development of the Elecraft K2? Er, you DO design all your own radios, didn't you? You said you did...it's recorded in Google archives...

39 years ago this date, a President of the United States was assassinated by an ex-marine in Dallas, Texas. I'm sure that was a lesser happening than you receiving an Advanced amateur radio license at age 14?

>> No, I believe that the introduction of $$ into FCC regulation via
>> spectrum auctions has changed the way FCC looks at things.
>
>Isn't that how it goes though... sigh. It's the Golden Rule- they who have
>the gold make the rules.

Not quite. The FCC has NEVER used the auction process for
any US amateur band. The auction process is two-fold: As a
decision tool as to which applicant gets exclusive "rights" in a
particular commercial radio service where a multiple-user
situation is not practical; as a revenue producer for the US
government general fund. Revenue from spectrum auctions does
not go to the FCC alone, is distributed according to the current
budget for all government agencies. You can check this out at
the FCC's website.

There are a great number of other radio services in US civil radio
and far more US citizens using those radio services than those
using amateur bands. The "gold" is not money per se but rather
a good-as-gold service distributed for all citizens. Many self-
centered long-timers sneer at both the government and all other
radio services except amateur radio and ill-use their caustic.
All radio users must share the EM spectrum and it is the task
of the FCC to regulate all of US civil radio. The FCC is open to
comments from all citizens about any US civil radio service.

Consider that each cellular telephone handset is both a small
two-way radio as well as an extension of the telephone system.
According to the Census Bureau, one in three Americans is a
cellular subscriber. That's very approximately 100 MILLION
subscriberships and a minimum number of little specialized two-
way radios. There are less than a million US radio amateur
licensees. There are more various vehicular radios (land, air,
sea in private water craft) than there are US radio amateur
licensees. The number of CB radios is hard to estimate but, of
all kinds of CBs there are somewhere in the neighborhood of
10 to 20 million in use, vehicular, fixed, handheld. There are
millions of low-power emitters in everything from WLANs to
garage door openers, keyless auto entry systems, cordless

telephones, microwave ovens, remote speaker and TV extenders, security devices to name just a few radio transmitters, all operating under FCC regulations. Then there is broadcasting services, microwave radio relay, public service radio services (state to local government agencies), utilities, paging, railroad radio services. Yet to come are some interesting new radio things (UWB is one of those almost here). It's a rather large list which seems unfamiliar to the dumbed-down long-timer whose entire knowledge of radio seems to come only pages of QST.

All us citizens use and enjoy at least some of these different radio services. That is the real "gold," the improvement in individual's quality of life.

>required to abide by the requirements. If this did happen (don't
>hold your breath though), there would be some VEs that would wish
>they could make you take the code test, but they could not.

The only written testing requirements that the FCC sets is a
minimum number of questions per test element. Content, all
subject matter, is decided by the VEC QPC and approved or
disapproved by the FCC. The FCC does not specify what is
required in test element 1 except a word rate...it is up to
individual VEC teams to specify content, select an option to
word rate, and whether or not to test "sending by hand."

Volunteer Examiners simply proctor license testing according
to regulations. They cannot mentor anyone into amateur radio
in the license testing process; such would be illegal. Some
ex-VEs in here have intimidated they "brought others into ham
radio" through testing, a gross distortion of the truth. Such ex-
VEs can, of course, mentor others outside of the testing
activity, but they cannot do so during the license test.

>made by serious and well-intentioned licensees who want the best
>for the Amateur Radio Service.

At first glance, it appears AS IF they were opining on the "best
for amateur radio" but they are all insisting on all newcomers
to go through the same hazing rituals as they did.

>All of the above quotations also completely miss the mark, in
>that they suggest that the examination process is the key to
>ensuring that "the right kind of people" (those who are

>"worthy") become licensed and, by extension, that "the wrong
>kind of people" get filtered out.
>
>First, the testing procedure is an "entrance" exam, not a
>"graduation" exam.

I disagree but only on a technicality. The FCC grants
permission to transmit RF in a specific radio service
according to their established radio service regulations
through licensing.

>Second, while "interest", "dedication", and "hard work" might
>be hallmarks of good amateurs, the FCC and ITU regulations
>do not specify levels of interest, dedication, hard work or other
>measures of "worthiness" as requisites for a license.

The FCC is not an academic institution, never was, nor were
the three previous radio regulating agencies in the USA. The
licensing process is just one other tool in the FCC's box for
use in regulating US civil radio.

Unfortunately, spurred on by the largest US amateur radio
membership organization, the license test has become a de
facto "certificate of learning" embodied with all the class
distinction attendant to the old six-class license structure.
It is all about rank-status-privilege on the basis of a license
class...love/interest/enjoyment of technology is very secondary
and practiced by only a small percentage...all others are bent
on proving themselves (in their eyes) as "better" than fellow
licensees.

>Therefore it
>is not the function of the examination process to determine (even
>if it could) if an applicant is "worthy" but rather to determine
>if he/she is QUALIFIED to use the spectrum assigned. There should
>be no "dumbing down", but neither can there be a requirement that
>the examination process screens out applicants who lack
>"commitment".

"Commitment" is everything. It MUST be shown to the long-
timers in order to show them they are "real hams." Long-timers
have become the ex-officio judges of comportment, moral
character, proper ethics, and (above all) adherence to the
standards and practices of the 1930s.

>Don't get me wrong here, folks. I believe that the examination
>process ought to be rigorous enough to determine proper knowledge
>and skills so that a new licensee does not inadvertently trash

>"good thing" or a "poor idea". But I have no expectation that
>ANY examination can filter out "unworthy" applicants who lack

>the proper dedication or motivation.
>
>Even if it could, who then would become the arbiter of "worthy"?

By all the holy writ in here, those revered arbiters are the long-timers who have defended their turf (by any means possible) and say that anyone not in agreement with them are trying to abolish US amateur radio.

The arbiters demand the status to be as quo as possible, no, repeat NO changes that lessens their importance in the self-light to their peers and the sub-human commonfolk (non-hams).

To those entrenched arbiters I say "ar-bite me." :-)

Okay, dickiebird, I agree that such a signing isn't amateur. The
IEEE is a professional membership organization.

IEEE Life Members remain members, voting, etc., everything the
same as "regular" members. They just don't pay any dues. Not
required once the qualifications are met. No extra money to be
paid, no "diamond" club thingie, no "VEs" needed to proctor an
entry for professionals. Over a quarter million IEEE members,
dickiebird. :-)

Well, as a retired (from regular hours) EE, I think you both mis-
understand the whole purpose of the morse code test. You have
to know that the long-timers value morsemanship nearly over life
itself, that they worship the mode (the "keys to the kingdom"as it
were), and ALL must pay obesiance to their fantastic skills.

To these demand-venerated morsemen, anything said against
morse code is a damnation against ALL of US amateur radio.
Morse code ability is the primary skill requirement for all "real"
amateurs. Without that they are "unreal," not worthy of
consideration as human beings.

The morse code test MUST be kept to show all newcomers'
"worthiness" to coexist on the same planet with these amateur
morsemen. Long-timer morsemen demand that.

You two have been warned... :-)

Just why is it "good policy" to stifle free discussion?

Or do you insist on only one viewpoint to always be "correct?"
Are your words golden for the US ARS? Of course they are,
all must think and worship as you say.

>> I was drug into the fray by

Feel free to distort reality...that's also freedom of speech, but
it is a rather hateful speech you speak just because you
cannot take strong opposition to your viewpoints..

>Plus the ARRL, young people who become licensed, people in the health
>care professions, easterners, midwesterners, hams with 1x2
>callsigns/Extra class licenses, and a host of others.

Well, there you have it...Mr. N2EY wants everyone to be
subservient to his wishes/opinions...even though he states
an outright lie above.

"The Armenian judges chanted in dismay, the balalaikas
were played..." etc., etc.

Not a good trollpiece.

But, it is no doubt satisfying to the insecure who cannot
abide a strong argument to their golden viewpoints of faith.
Shrug.

Yes, this is pretty much how computer languages evolved. Assembly language is still used today mostly in the development of high level languages (C, VB, Java, etc.) and operating systems, because as each new processor hits the market, they have their own instruction set.

BTW, there is a difference between assembly and machine language. Machine language is that which is understood by the computer - the 1s and 0s. If you had to write and debug a program using only 1s and 0's, you'd soon become frustrated after trying to debug the first couple lines of code. Assembly is the next step up from machine language. It uses alphanumeric representations of the 1s and 0s that the computer uses, and a compilier converts them to the machine language that the computer understands.

Well the really funny thing is that they're forgetting...or maybe they don't
realize, that I have a General Class OM right here in the office with me.
And, I could even cook up a good dinner for any number of Extras and they'd
be happy to get out here, chow down, visit in the office and play on
computer, etc.!

Larry, you really surprise me on this one because we've had this exchange
more than once. You should remember that I have a General Class hubby. I'm
very well aware of exactly the privileges I have in the ham radio spectrum.
And, if the answer hadn't been forthcoming on the CW question, it's easy
enough looked up. It's you and your type that flood your brain with useless
information, remember?

Uh huh, now you're *MAYBE* getting it. I've also worked a very small amount of DX, had a ball with it, and have managed to get an actual conversation out of every one of them--through hysterical laughter and "I love its" (commenting on my callsign). There's no mistake when I give my call, phonetically or not.

So, you didn't know my license class? Is that why you had to look me up on QRZ?

Boy did that bring back some memories. I sort of wish I hadn't dropped my license in the early 80s (and lost my call N2JH) .... oh well, I retested in 93 - but still miss that call. Yep, I remember the old 1.800 to 1.825 - one end of 160 we were limited to 25 watts input (at least here in Rochester, NY). Sigh. Getting old ;)

Source record: 55948

Steps to better Amateur Radio
1. Get rid of the word "Ham"
2. Get rid of excess codewords.
3. Discourage cults such as Wouff Hong
4. Encourage Amateurs to not have their lives revolve around "Hamming".
5. Encourage Amateurs to lose weight.
6. Get more females, young people into Amateur radio.

7. Get rid of QST and bring back Ham Radio magazine
(but change the name to Amateur Radio magazine).
8. Get more people involved in: Homebrewing, radio direction finding,
troubleshooting, use of test equipment, antenna building.

9. Positive publicity - positive publicity spots in newspapers, etc.
Endorsements by celebrities, Amateur radio in movies.
10. More clout with politicians.
11. Stress educational benefits, such as geography, etc.
12. Collaboration with EE education and IEEE, not separation from them.
13. Real development activities through Amateur radio clubs.
14. Real tests of viability of certain modes by getting large numbers of people
to test them.
(Could be done in a contest).

15. Get rid of the Morse code requirement.
16. Encourage an adequate number of coders - but don't tie this to the license
classes.
17. Morse certificate for 5 wpm, Morse with distinction for 13wpm

18. Real license preparation classes to understand the material.
19. Non-question pool format for written tests.
20. Call the license classes Novice, Intermediate, Advanced instead of
Technician, General, Extra
(Clearer terminology and more respectful of achievement).
21. Simpler "Operator" class that does not include practical circuits.
(I bet with a more difficult test, many coders will end up here instead
of Extras).

22. Real Emergency communications training,
(must demonstrate on actual equipment), instead of just written test.
23. Field day preparation meetings so everyone can do their best on field day.

24. More real skill building activities
25. New awards. Instead of WAS and other volume based awards, recognition for
WAB(Worked All Bands), Distance awards, station setup time awards, etc.

You dont have to believe it, the Data Base says Extra for WA8ULX. For Brian it says CBplusser, with a foot note which says, Brian dont even try were not giving them away just yet.

Yes and no. :-)

The result of a high-level computer language compilation or
interpretation is machine language instructions. The
intermediate steps are up to a compiler which may
automatically optimize resulting machine language routines
such as making several equivalent routines a sub-routine
that can be called as needed.

Most Assemblers aren't strictly direct-to-machine language
programs but include things like assigning where a jump
address is or will be, allowing macro statements (to ease
typing things over and over again). The coding itself is done
in machine language statements so the programmer has
more control of the result.

Assemblers are machine-specific, written for a family of
CPUs. High-level language compilers usually fit several CPU
families or can be converted to future familes, concentration
is on the overall task of computation. Interpreters are in the
middle of the two. :-)

There's usually a class-distinction among programmers, too,
assembler-level types sneering at C and FORTRAN coders,
the high-level language programmers sneering at assembler
"mechanics." What really matters is getting a CPU to
accomplish a task, not the way to get there. :-)

Funny...there's a parallel to amateur radio: Some long-timers
insist that the method of using morse code is of utmost
importance and the communication itself secondary. :-)

Some one had better know how to write in assembly language. You do need to develop ever advancing compilers etc and that may take some assembly language programming even today.

Ah, yes. But those of you who advocate "self-policing" are the very ones who
take it upon yourselves to sometimes play "net cop" while you titter and
tatter about the poor operating procedures of others. This is, in itself, a
form of elitism in that a minority of ops willingly choose to castigate
others for operating procedures with which they do not agree. Beware of
"self-policing" and the resultant criticism of other ops...this, in the eyes
of many, has not the appearance of being friendly.
So far it would appear that "self-policing" is but a nice feel-good idea
with little merit and zero results.

Machine code, and the textual representation of machine code: assembly language
are the lowest normal level of programming (ignore microcode, etc.) The
ultimate output of compilers and assemblers is the machine code. There are other
ways of making computers do what you want also, including 'interpreters' and/or
'emulators'.

One first creates a bunch of 'source files' that contain the program instructions
(in high level language or in assembly code), and then apply the source files to
a compile/linkage process, or directly execute the program using an 'interpreter'.
Interpreter programs can either 'execute' the code directly upon parsing (reading)
the program statements, or can create an internal version (or somewhere in
between.) In the case of compile/link-type systems, they produce a program that
can be run directly on the computer under specific operating systems that support
I/O and other functions. The simplest forms of Java are a hybrid, where you
compile the source files, but you run a program that interprets the psuedo-machine
code as if it is a real processor (well, sort of...)

There are more than I list, but off the top, I can think of at least these four methods
of 'making computers do what you want':

1) Compiler/Assembler/Linker:
These take a higher level language (assembler is slightly higher level than
machine code from a representational standpoint) than machine code, and
produce runnable machine code. This is like using Microsoft-C or MASM,
linking the output with libraries, and produce an EXE file for NT/2000. A
similar thing is normally done on Unix.

2) Traditional interpreter:
The MS Basic interpreter that Billy and friend wrote would directly execute
the text of a program, but reparsing and executing the code statement by statement.

3) Less traditional interpreter:
AFAIR, Perl creates a compiled copy of at least a part of the program, but the
'compiled' output is an internal representation that is used as a set of instructions
for software.

4) P-Code compiler/interpreter
Java and the old UCSD P-System on a PDP11 uses an explicit compiler to
produce a file that is similar to machine instructions. The difference is that the
'machine instructions' are actually created for a formally defined software

interpreter for those instructions. In some cases, Java performance has been improved so that during the 'interpretation' of those virtual instructions, native (real) machine code is made available for future execution in a given running of a program. Even further, it is possible to 'compile' those Java virtual machine instructions into an EXE-type file that would be normally directly created by a Microsoft-C or Unix-C compiler and linkage process.

So, I hope this helps to clarify, but probably is 'too much' from the standpoint starting from scratch.

I agree that there is at least one 'Barney Fife' in every organization. However, it is
better that Ham radio be self-policed than to have the FCC crack down only against
things that they politically don't like. If ham radio is allowed to be a cesspool of
people who violate conventions, but technically obey the law enough to stay under
the FCCs radar, then that would diminish the hobby. I am not familiar anymore with
the ARRL guidelines, but there should certainly be some guidelines so that the 'net-police'
or the
'ham-police' people who have a little too much zeal can be helped back to
more reasonable attitudes. The various conventions and rules of etiquette need to
be taken seriously, and I seem to remember that even when I got my license a long
time ago that there were such 'conventions.'

It is much better that reasonable guidelines be instituted, and strong suggestions
be made in the guidelines that the spectrum is to be shared amongst HROs
according to the law and conventions. If there aren't reasonable guidelines, and/or
intolerant people who seem to emotionally need to be snobs, then the self
policing will sometimes fail. Frankly, from what I have heard, the current scheme
seems to work okay, but there'll always be those people with too much zeal!!! :-(.

People do tend to be cliquish, and I have made various such mistakes in
previous situations. It is important that the 'elders' avoid become
condescending or turn into control freaks.

I don't mean to compare hams with other community radio service participants, but I remember my Dad talking about various groups believing that they 'own' certain CB channels (this was back in the 'Convoy' days). It is sadly odd, if not almost funny to think that someone is so diluded into thinking that they can have dominion over a resource like that. Again, times have probably changed a little on CB, and I am not making that complaint about amateur radio (I am just seriously thinking about ham again), but even good people can become petit and cliquish in situations that lend themselves to that kind of behavior.

I really believe in ham radio as a great hobby for kids of all ages (including those who are retired :-)). Computers are great (and I am a very serious computer person), but I'd like to see ham radio compete for alot of the mindshare directed towards the CREATIVE parts of the computer hobby... (I am NOT confusing the computer WWW addict with the real computer hobby of developing tools and applications that do interesting things.)

Hopefully, I'll have collected enough info in the next week or so to be able to embark on a new hobby...

Why, no Kim. Then again, I didn't do a description for the amateur
radio club or make a report on it at school or tack a graphic paragraph
on a bulletin board at the grocery store. Bruce acts like a jerk and
you respond by trying to show that you have less class than he.

Hansl:

As a ham who came into the ARS years after the Incentive Licensing "fiasco," I personally benefited from a challenging and comprehensive set of licensing requirements which insured that I had a better understanding of technical and operational concepts, and the ability to employ the Morse/CW mode at a useful proficiency level before I was granted full HF privileges. The only mistake made by the ARRL/FCC was not to allow full grandfathering of extant General-class licensees to the Extra class. At least that mistake was not repeated under the Restructuring of 2000. If it had been, the whining would have caused rivers of tears which would have caused levees to break around any low-lying areas with a large population of hams.

It is too bad that once we had a superior set of licensing requirements, the Latter Day Whiners were allowed to prevail, and set us back to the bad 'ole days of dumbed-down license testing.

You've found the key word...HOBBY. Its not a job or political position
and and if its a PITA you can (and should) just walk away and do
something else. No need to hang out on a repeater/club/band/newsgroup
if the general attitude there is such that aggravates you and takes away
from the enjoyment. No rocket science and no Morse code unless you want
it that way.
Good luck,
Bill WX4A

I do agree with that. It would be good if the unecessary cost of entry to HF
'Morse code' could be removed (limited by treaty) however.

My interest in technical competence for HROs is based upon being able to
responsibly deal with and understand problems dealing with more than low
power transmitters. With high power comes more responsibility for local
interference and occupation of spectrum space.

I don't see a problem with Ham radio having a pure communicator class
license, where there is little or no technical or code qualification. However,
that class of operators should be limited to purchased gear at low power on
VHF/UHF.

> award.

I strongly supported Incentive Licensing for a number of reasons. In
retrospect I might not today support it as strongly as I did back
then.

>
> When a lot of us got
> started in the hobby the bands were not subdivided like they are today

They certainly were subdivided and long before Incentive Licensing
came along. Techs couldn't operate below 30Mhz at all and Novices only
had wee slices of 3.5, 7, & 21Mhz cw @ 75w *input* plus some 2m phone
and no VFOs anywhere.

Incentive Licensing added a few additioanl twists to the existing
concept and set aside a lousy 25 Khz at the bottom ends of four HF
bands for Extra-only cw ops. Annoying to some, cleared a lotta local
qrm out those hot segemnts for others. Like ME. Worked.

So here we is, on one hand we came in here bitching to the heavens
about passing out freebie nocode tickets then turn around and bitch
about the FCC having tightened the screws a bit back then. Cute, gotta
love it.

The other side of the Incentive Licensing coin was that the FCC also
expanded the phone bands downward into the "dx only" portions where
U.S. ops had not been previously allowed. Operationally that was a
huge gain for us because it permitted on-freq vs. split-freq ops with
DX who were not and still are not allowed above, for instance, 3.800.
Incentive Licensing was not a one-way street at all.

By far the most pissed-off hams wrt to Incentive Licensing were the
Canadians who hung out below 3.800 and 7.200 to get away from our crap

and all of a sudden found themselves drowned by our newly enfranchised
hordes of Extras. Boy, there was some real warfare . .

Advanced Class licensses only had to take a written and lost some cw
space very few of them used anyway but they lost no phone space. I
agree with Dan, Generals got spanked but even they only lost a grand
total of 200Khz over six MF/HF bands. I ran those numbers once, turned
out that Incentive Licensing only affected something like 6% of our
<30 Mhz spectrum space. And that was before the WARC bands came along.
Big frigging deal.

Incentive Licensing was a bit of a lurch but it certainly was not a
"hand-wringing reinvention of ham radio". Note that ham radio has
grown many times over since then *despite* IL.

The message is that in the big picture today yammering on about
Incentive Licesnsing 34 years after it happened is a pointless
exercise for pedantic old farts like us with nothing better to do than
post unending reruns of ancient history, i.e., "the good old days".

> and
> it seems that we all, regardless of license class, worked together to

> Extra who suggests that a new Technician might have something to
> contribute to our beloved Amateur Radio service.

Tote up the number of tech articles in QST an/or QEX written by Techs
in the past ten years vs. the number written by Extras.

>
> Back then, it seems that we all, regardless of license class, worked
> together to improve the Amateur Radio Service.

Gimme a break willya?!

>
> Back then, nobody got a special deal because they could beep faster or
> remember more electrical formulae than someone else.

Tell that to a 1953 Tech or Novice. I wuz one.

I got my Extra in
> 1964,
> well before disincentive licensing, and it was simply just another personal

> cadets") were universally looked down on as poor examples of what a ham
> ought
> to act like.

Yeah, right. "One or two" . . not counting all the cranks with
political agendas, qrmers, slims . . You musta led one helluva
sheltered radio childhood or you have a very convenient memory.

> The Novice bands were a "cacophony of exuberance" to steal a
> term that K1ZZ used in a meeting here in Minneapolis.

No kidding, as if we had any other choices. Having only a year to get
to 13wpm or 'bye-'bye HF ham radio was the incentive from hell vs.
anything Incentive Licensing "did" to ham radio.

> Old hands
> were on those Novice bands also -- it was not unusual to hear W4KFC or W5ZD
> patiently working WN4KKN or WV2CNL -- nobody remarked that it was "nice" of
> them to do that -- it was just part of being a good ham. The notion that
> you
> had earned a special band segment never occurred to anyone

Horsepucky. Old Fartism was endemic and pervasive in the hobby in
1950. I wuz there too, ya went to club meetings and kept yer mouth
shut and listened if you wuz only a Novice or gawd forbid a wannabe.

-- we were just
> excitedly "playing in the ether", and there was no distinction on the air
> between Extra, Advanced, General, or Conditional
> -- elitist special callsign
> formats

Had precisly absolutely NOTHING to with the implementation of
Incentive Licensing in 1968, the callsigns game didn't start until
well into the 70s.

> to celebrate the fine granulations of your test taking/memorization
> skills had not been invented.

Umm . . I notice that you have one of those elitist pig 20wpm
FCC-tested 1x2 callsigns too Hans . . ?

>
> We'll never return to 'back then', unfortunately.

Thank God.

>
> 73, de Hans, K0HB

VHF/UHF seems to be the experimenter's playground these days and the intl treaty doesn't prevent >30MHz licensing without code. HF will be sticky forever. You can work around the world with a watt on HF, and so can the garbage spouting out of an improperly operated rig, so the potential remains for interference to commercial services and thats why the Treaty is such as it is. Its not an argument that I'm going to try to hold my own on, however. I recall that Japan went to a 'communicator' license scheme back in the 70s-80s and no-coders were given privileges up to 20 watts on HF or something like that. The bands didn't turn into a zoo-like cacophony of echoes and roger-beeps. Maybe in Japan it did...I wouldn't know.

>
> I don't see a problem with Ham radio having a pure communicator class

> that class of operators should be limited to purchased gear at low power on
> VHF/UHF.

Well, with any drastic change like doing this on HF, there has to be some enforcement mechanism or else the existing rowdy ranks from 26-28 MHz have a real potential to screw things up for everybody on all bands. The FCC got out of the ham bizness many years ago when they turned over 'licensing' to the ARRL. The only time they even bother with enforcement of the Amateur Radio Service is when some nut goes berserk on 75 meters or a repeater and generates a ton of specific complaints. I don't think they want to go back to the patrolling mode like in the old days where if you said s**t on the air you'd automatically get an FCC notice (and a dozen ARRL OO notices)...and I don't think anybody wants to see that. But opening up HF would require such vigilence and we would all pay the price.

Bottom line is that- 1) 5 wpm ain't all that tough and 2) outsiders looking in to the amateur radio service don't necessarily have the same perspective of those already inside. Pity that it translates into a we vs. them scenario but thats human nature.

I've taught code classes with a hometown club and its very clear that some people simply can't master it but would be 'good' hams nonetheless. I'm not going to speculate about mental blocks and all that but I can

vouch for the ones that would jump up in the middle of a code-practice session and yell out "I ain't puttin' up with this s**t" and storm out of the room, yet 9-year-old kids were able to pass muster. I don't think they'd behave that way at the Driver's License office, so yeah, there's some level of committment that makes getting into the hobby something to work at, even if it may seem archaic. These same 'examples' are the same ones that will also piss and moan about putting their real name and address on a FCC License Application form.

There's a framework in place that allows most anybody whose knuckles don't drag the ground to get a ham radio license. The people who can't accomplish this...well, go figure.
/end rant

> > that I am likely to never use.
>
> Actually learning all about DSP is useless as it's built into the radio and
> I don't have to do anything.

Wrong.
If you knew about DSP, you could easily hook up the radio to your laptop
and program, for instance, a scan mode that stops only on the "voice"
channels, and not simply where the signal is strong.
You could build your own noise-reducing filters.
You could get a programmable radio (Ten Tec?), and modify the firmware.

What you are saying is a bit like saying: Hey, I don't need to
know how to solder, my radio comes already soldered.

The fact is that more and more of the radio receiver functions in the
future will be done digitally. There are two main reasons:
it's more flexible, and it is easier and more repeatable
to manufacture digital ICs than analog ones.
In cell phones, in cordless phones, everywhere that radio
technology matters, digital is more and more used.
If you refuse to learn digital signal processing, pretty soon you will
understand about 5% of how a receiver works; the rest will be digital.
Of course, you will still be able to use code on archaic equipment,
but amateur radio should look forward, not backward.

Peter

Amateur Radio Newsline™ Report 1318 – November 15, 2002

Amateur Radio Newsline report number 1318 with a release date of Friday, November 15, 2002 to follow in 5-4-3-2-1.

The following is a Q-S-T. Ham radio is a lifeline after tornadoes hit on Sunday November 10th. Find out the details on Amateur Radio Newsline report number 1318 coming your way right now.

(Billboard Cart Here)

**

RESCUE RADIO: HAM RADIO AND THE NOVEMBER 10th TORNADOES

Ham radio is called out after a series of tornadoes hit in several states east of the Continental divide. Thirty-five are confirmed dead. Damage is in the tens of millions. And ham radio becomes a life-line when all other communications fail. We start our coverage with Amateur Radio Newsline's David Black, KB4KCH, in our South-East bureau not far from one of the areas hardest hit:
--

For Alabama, the night of November 10th is one for the record books. The small town of Carbon Hill was devastated. Ten people were killed there, and damage was extensive following two tornadoes--one of them, an F3 that cut a path of destruction measuring 46 miles. In all, 12 people died in Alabama.

Two counties away from Carbon Hill, amateur radio operators were on duty at the Weather Service's Birmingham Forecast Office, where forecasters were issuing a total of 46 Tornado Warnings. The ham radio group that works with the Weather Service is called the Alabama Emergency Response Team, or ALERT. Chuck Arthur, KF4SSX, is ALERT's President:

--
Arthur: "It was very busy. We had four of our members down there from 4 p.m. until after 2 a.m. and we were busy the entire time we were down there"
--

At one point, more than half a dozen Alabama counties--stretching from eastern Tennessee to eastern Mississippi--were all under Tornado Warnings at the same time.

--
Arthur: "We are able to talk to all of the different storm-spotter nets across North Alabama and of coarse the National Weather Service coverage area and receive reports of damage, tornado touch-downs, hail and all of the important pertinent things that the Weather Service is interested in"

--

Arthur says emergency communications were conducted on VHF and UHF frequencies:

--
Arthur: “The storms came in from the South-West and moved all the way up through the North-East corner of the state three or four times in a row. We had multiple counties under tornado warnings at the same time so it makes it very busy”
--

To the north, Tennessee was slammed hard by killer twisters, too. 17 deaths were reported statewide, making the outbreak one of Tennessee's deadliest. President Bush declared 16 Tennessee counties disaster areas. From Louisiana to Pennsylvania, 88 tornadoes were reported.

Another community hit hard was Van Wert, a town in western Ohio. Fred Vobbe, W8HDU, of the DX Audio Service is in nearby Lima Ohio has that part of the story.

--
NOTE: DAVE BLACK TOSSES TO FRED VOBBE IN OHIO
--

Sunday was cool and quiet, but when storms racing across Indiana quickly it heated up the amateur community in Van Wert, Ohio. The call for amateur assistance came as Van Wert Ohio E.M.A. Director Rick McCoy, operating the Van Wert Amateur Radio Club's W8FY, alerted hams to an approaching storm.

The storm spawned one tornado in the community of Berne, Indiana, but by the time the storm arrived in Van Wert there were reports of as many as four separate funnels.

Listening to ham traffic on the 146.850 repeater and public service channels was like listening to an attack from enemy. Call after call relayed the fact that there were tornadoes on the ground. Homes, businesses, and even a large power feeder tower buckled and fell to the ground as the winds from the F4 tornadoes tore up the once pristine countryside.

The initial storm spotters tracked the storm system as it entered Van Wert county, and then exited into Putnam County where it then hit Continental, Ohio. Later the storm touched down again in Huron and Sandusky Counties on the south shore of Lake Erie.

At one point a ham radio operator solemnly reported assistance as he came across a fatal. Hams assisted in pulling people out of homes that were flattened. Four people died, two in Putnam, and two in Van Wert County. The death toll in west central Ohio could have been higher had spotters, and the Van Wert County E.M.A., not worked cooperatively together. Hams reported to the Van Wert E.M.A. and an alert system used by the county which warned a group of school kids who escaped from a theater just seconds before it was reduced to rubble, leaving a small Toyota in row one. Citizens had as much as 28 minutes to prepare for the storm due to the efforts of hams

Ham involvement did not stop with spotting. Again, working with the Van Wert County E.M.A., hams assisted in damage assessment, helped in local shelters, located downed power lines, kept traffic and the curious out of devastated areas, and assisted police, fire, and EMTS operators with communications. Some hams stayed through the night manning communication centers, which helped authorities concentrate on the task of finding the missing, and assessing the damage.

The storm was compared to the April 3rd, 1974, tornado in Xenia, Ohio, where 33 lost their lives. Had it not been for ham radio operators working closely with authorities the death toll in Van Wert and Putnam would have been much higher.

In west central Ohio, I'm Fred Vobbe, W8HDU, reporting for Newsline
--

You can see some of the damage from the storm at Fred's web site, www.vobbe.net/weather.

And one last thought: The tornadoes of November 11th are another reminder of the way a disaster can occur at any place and at any time. And when there is no other way to communicate ham radio is always ready to step in. (ARNewsline™)

**

RADIO HORROR: AMATEUR OPERATOR MURDERED IN GAMBIA

A United Kingdom ham has been killed while on vacation. And as Jeramy Boot, G4NJH, tells us, it appears as if he was the victim of a rather violent crime.

--
Ron Ford, G3NKO, has been murdered while visiting the Gambia. Ron, from Waterlooville in Hampshire, had built his own holiday accommodation in the Gambia, from where he operated as C56RF.

His body was found at the end of October and has been brought home for burial. It is thought that Ron was the victim of a robbery and the circumstances of the murder are now being investigated by officers of the Metropolitan Police.

Ron was an active member of the Royal Signals Amateur Radio Society, and was a regular check-in on the RSARS international net on 20-meters SSB from the Gambia. He had also held a number of other DX calls, including MP4BFH in Bahrain, MP4TBV from theTrucial States, VS2FN in Malaya and VS9AFR from Aden.

Jeramy Boot, G4NJH.
--

As we go to air there has been no word from Gambian officials on where its investigation of this crime is leading. (GB2RS)

**

RADIO SECURITY: BE CAREFUL WHAT YOU SAY ON THE AIR

Use discretion an the air and help defeat the terrorists. That’s the sub title of Bill Sexton’s MARS column appearing in the December issue of

Worldradio Magazine. And in it, Sexton, who holds the call N1IN says that American’s now face a new concern over the indiscreet transmission of material that my seem harmless but which could be used against us by a terrorist enemy.

By way of example, Sexton cites the well published airline schedules that were used by al-Queda terrorists to coordinate their September 11th attacks on New York and Washington. This is material still available on every airlines website.

Sexton says that we all must all be concerned with what the military calls Operational Security or OPSEC. And he indicates that it is very important for hams to consider what they are saying on the air because you can never tell who listening in. And he says that even the most seemingly innocuous tidbits of information, monitored by hostile ears are probably being handed on to the enemy’s intelligence analysts in the hope it will reveal some weakness or secret that can be used against us.

Sexton covers quite a bit about domestic security and how you can do your part. You will find it beginning on page 50 of the December issue of Worldradio Magazine. More information is on the web at www.wr6wr.com. (Worldradio)

SPECTRUM POLICY: FCC CHAIRMAN WANTS TO REVAMP THE NATIONS RF AIRWAVES

The government's top communications regulator wants to revamp the nation's current policy on use of the public the airwaves. Bill Pasternak, WA6ITF, has the details:

--
Federal Communications Commission Chairman Michael Powell says that he rejects the notion that there is not enough spectrum to go around for those who want it. And the FCC leader is proposing an almost total overhaul of the nations telecommunications policy involving radio frequencies used for everything from television broadcasts to wireless Internet devices and everything in-between.

Powell says he hopes technology and new FCC policies will take advantage of all empty and underused spectrum, possibly by using time sharing techniques. He says that recent tests conducted by his agency in five major U-S cities show that there are many under utilized spectral parcels available for sharing. This is especially true when some frequencies are used only at certain times of the day and are otherwise left empty.

What is evident is that the FCC is looking at ways to better utilize every hertz from D-C to light and beyond. And if a mandatory sharing of most spectrum is put in place there’s a good chance that all hobby and personal radio -- including ham radio -- will be sharing in some future yet to be established all-digital domain.

For the Amateur Radio Newsline, Bill Pasternak, WA6ITF.

--

The frequency bands referred to by Chairman Powell were not detailed in the news release. (Various FCC and other news releases)

**

SPECTRUM POLICY: AUSTRALIA ISSUES PAPER ON SPECTRUM USE

The United States is not the only place where spectrum use and bandspace is an issue. It’s also under study in Australia where Q-News Trevor Tague, VK4BAT, tells us what the Australian Communications Agency is doing:

--
The ACA has prepared a Discussion Paper outlining a range of issues relating to the operation of spectrum licensing and posing some questions for discussion.

The paper does not attempt to present the ACA's assessment of these issues but rather aims to provide a starting point for industry debate about the effectiveness of the spectrum licensing concept in the light of experience since its implementation in Australia some five years ago.

Trevor Tague, VK4BAT, reporting for Q-News.
--

The Australian Communications Agency is soliciting input on this matter from the citizens of V-K. (Q-News)

**

HAM RADIO EDUCATION: THE BIG PROJECT KEEPS GETTING BIGGER

Back here in the United States, the December issue of QST will feature an article on the American Radio Relay League’s Education and Technology program better known as “The Big Project”. And, according to an Internet posting to QRZed dot com by League President Jim Haynie, W5JBP, the program which got off the ground late last year grew to 26 schools in 2002.

When President Haynie proposed this project to the League’s Board of Directors, he said that it should be funded by donations, not dues. That’s exactly what has happened and he now says that he is gratified at the results to date.

W5JBP says that the Amateur Radio community has sent a loud and strong message that this is something that they want. He adds -- and we quote: “I, and the entire ARRL organization want to thank you for that support.”

At least 14 more schools are lined up to join the Big Project in 2003. The full text of Jim Hayne’s posting is at www.qrz.com. (Adapted from QRZ.COM)

**

ENFORCEMENT: WASHINGTON LAW NAILS SPAMMER

An Oregon man was ordered to pay nearly $100,000 in the first case brought under Washington state’s tough law against "spam" e-mails. Attorney General Christine Gregoire's office estimates that 28 year old Jason Heckel of Salem, sent as many as 20,000 unsolicited e-mails to Washington residents in 1998, trying to sell a $39.95 booklet called "How to Profit from the Internet."

The case was the first brought after the Legislature banned commercial e-mail with misleading information in the subject line, invalid reply addresses or disguised paths of transmission. Judge Douglass North ordered Heckel to pay a $2,000 fine and more than $94,000 in legal fees.

Heckel didn't appear in court. His lawyer Dale Crandall said he plans to appeal, Crandall says that state anti-spam laws violate the U.S. Constitution's protection of interstate commerce. (Published news reports)

**

ENFORCEMENT: OHIO HAM AGREES TO VOLUNTARY SUSPENSION

An Ohio ham has agreed to a voluntary one year suspension of his operating privileges. This after the FCC accused him of interfering with a Cincinnati area repeater system. The FCC’s Daryl Duckworth, NN0W, explains:

--
Duckworth: “The Enfocement Bureau, by agreement, imposed a one year suspension on Gary R. Weiler, KI8DI, for interference to the K8CLA repeater system in Cincinnatti. The interference occurred in March.”
--

Back in September the FCC sent Weiler a Warning Notice that alleged on several occasions he had deliberately interfered with the K8CLA repeater. That system is operated by the Cincinnati Amateur Radio Club which the FCC says assisted in tracing the interference to Weiler. By agreeing to the one year suspension Weiler avoided harsher enforcement action that could have included a hefty fine and the possible revocation of his amateur license. (FCC)

**

REPEATER COORDINATION: METROCOR SAYS COORDINATION IS BACK IN NNJ-NYC-LI

Repeater coordination appears to have returned in and around the New York City area appears. This with word that MetroCor has issued its first coordination documents on October 24th to repeater systems that have had no changes from their prior coordination.

This marks the first time for any organization to issue any coordination documents within the area since the collapse of the Tri-State Amateur Repeater Council several years ago. All repeaters in the New York City, Northern New Jersey and Long Island New York areas are being asked to file with MetroCor by

December 1st so that it can meet the submission date deadlines of the various repeater directories.

More information and necessary documents are in cyberspace at www.qsl.net/metrocor. (MetroCor)

**

RADIO LAW: COURT STRIKES DOWN DESCRIPTIVE VIDEO FOR THE BLIND

Bad news for the visually impaired. A Federal appeals court says that the FCC overstepped its authority in ordering broadcaster to provide descriptive video to accommodate the blind. Amateur Radio Newsline's Bruce Tennant, K6PZW, reports:

--
On Friday, November 8th the U.S. Court of Appeals for the District of Columbia Circuit threw out Federal Communications Commission rules requiring television programs to include these oral descriptions of the action on the screen. In rendering its decision, the court said that Congress did not give the FCC the power to order the creation of this service.

The court maintained that Congress only authorized and ordered the commission to produce a report on how best to accommodate the needs of the visually impaired. Nothing more and nothing less. And that it definitely did not direct the agency to create a federal mandate that a descriptive audio service be made mandatory.

Under video description, a narrator describes the action during natural pauses between dialogue. The description is available on the secondary or SAP audio channel which is usually used for second language broadcasting.

The Motion Picture Association of America had challenged the rules in court. It claimed that the FCC was not authorized to issue them. Now, the U.S. Court of Appeals for the District of Columbia Circuit says that it agrees.

For the Amateur Radio Newsline, I'm, Bruce Tennant, K6PZW, in Los Angeles.
--

Blind advocacy groups are criticizing the court decision. They say its a setback for those who are visually impaired. (Published reports)

BREAK 2

This is ham radio news for today's radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org.

**

HAM RADIO BUSINESS: KENWOOD TO RESTRUCTURE

Some big changes at a company considered one of ham radios “big three. Ken Butler, W1NNR, tells about the news coming from Kenwood:

--
Kenwood Corporation is merging five U.S. based subsidiaries. As part of the restructuring, Kenwood will combine home and car audio marketer Kenwood U-S-A, its repair company Kenwood Service, Kenwood Communications and Kenwood Systems with their parent Kenwood Americas. The merged entity will simply be called Kenwood.

As part of the merger, Kenwood will expand its U.S. based home and car audio engineering team. The communications business which includes Amateur Radio products will continue to maintain its own sales and marketing staff. The consolidation won't shut down any offices or warehouses and the company plans to add people in an engineering capacity.

Ken Butler, W1NNR.
--

The changes here in the United States are a are part of a total Kenwood corporate restructuring announced earlier this year. (ARNewsline™ from press release)

**

OUR HERITAGE: KFBK AT AGE 80

Former Amateur Radio Newsline reporter Ross Du Clair, WA6VWY, passes along word that Sacramento California radio station has made history. This, as KFBK-AM 1530 celebrates its 80th birthday this month.

Ross is the Chief Engineer for several stations including KFBK. He says that his station began as the broadcast arm of McClatchy Newspapers in February of 1922. McClatchy is best known as the publisher of the Sacramento Bee.

Today KFBK is owned by Clear Channel Communications, of Austin, Texas. Over the years, KFBK engineers contributed many innovations to the radio broadcast industry. This includes the creation of the Ampliphase Modulation system adopted by RCA.

The station officially celebrated its "birthday" Friday 8 November 2002 at the Sacramento Hyatt Regency. The legendary Rush Limbaugh was to be the guest of honor. Limbaugh began his meteoric rise in talk radio from the studios of KFBK. (WA6VWY)

**

HAM RADIO IN SPACE: ISS EXPEDITION 6 ARE ALL HAMS

The new ISS Expedition 6 crew are all of licensed radio amateurs. They are U-S Astronauts Ken Bowersox KD5JBP and Don Pettit KD5MDT. Leading the team is Russian Cosmonaut Nikolai Budarin R-V3FB.

The launch of Space Shuttle Endeavour was planned for November 11th. It was halted only minutes before liftoff when a small oxygen leak was detected. A new launch date is tentatively set for Monday November 18th.

The STS-113 flight of Space Shuttle Endeavour is scheduled as an 11-day mission. During the seven days the shuttle will be docked to the Station, three spacewalks will be performed in addition to delivering the new crew. (AMSAT)

**

HAM RADIO IN SPACE: THE LEONID METEORS ARE COMING

Sky & Telescope magazine reports the Leonid meteor shower is due to sweep across Earth during the early morning hours of Tuesday, November 19th. If the weather is clear, we could be in for a grand celestial show. And many meteor scatter enthusiasts are expected to be on the air attempting to make contact by bounding signals off the ionized meteor tails as they burn up in the planets atmosphere. (Various sources)

**

INTERNATIONAL - CANADA: RAC VP RESIGNS

Radio Amateurs of Canada has announced the resignation of is First Vice President Joe MacPherson. MacPherson cited irreconcilable interpersonal differences with some members of the Board of Directors as the reason for his reason to stand down from the RAC Executive. A replacement for MacPherson will be named within next few weeks. (RAC)

**

CONTESTS

Turning to the contest calendar, word that the Bulgarian L Z DX contest begins at 12:00 U-T-C on Saturday November 16th and runs for 24 hours. This is a C-W only event taking place on 80 through 10 meters. The approved contest exchange is an R-S-T report and your I-T-U Zone. (GB2RS)

**

DX

In D-X, word that OH0Z on Aland Island will be active during the November 23rd to the 24th CQ WW CW Contest. He will be operating in the single operator, all band category. QSLs via Ari Korhonen, OH5DX, at his callbook address. (GB2RS)

And KX7YT is active on 10, 15 and 20 meters SSB and PSK31 as S-21-Y-V from Bangladesh. He will be there through the 4th of December. Q-S-L this one as directed on the air. (Modern DX)

Higher in frequency, the GB3VHF 144 MHz propagation beacon was removed from service on November 2nd for maintenance and was expected to be for one week. (RSGB)

And the GB3BUX 50 MHz beacon has suffered antenna damage due to storms a couple of weekends ago. It is currently running at reduced capability as a result. Its sponsor says that repairs will be made as time and weather conditions permit. (RSGB)

**

THAT FINAL ITEM: FCC HONORS WORLD WAR II COMANCHE CODE TALKERS

About a year ago Amateur Radio Newsline told you about a very special group of Native Americans who’s linguistic ability made battlefield communications secure during World War II. Now, the Federal Communications Commission has taken the time to honor this group for id dedication to our nation. Amateur Radio Newsline’s Norm Seeley, KI7UP, has the rest of the story:

--
The Comanche Code Talkers were members of a specialized communications unit of the U.S. Army 4th Signal Corps. And using their ancestral Comanche language they created an unbreakable code used by Allied Forces on the battlefields of Europe. Now, decades later our own Federal Communications Commission has paused to honor this group of Native Americans for their meritorious service to our nation.

Charles Chibitty of Tulsa, Oklahoma was the FCC's guest of honor at the recent ceremony. He told how he and 16 other young men, who had grown up together and were all members of the Comanche Tribe of Oklahoma, used the Comanche language and their Army communications skills to create a military intelligence code that was never broken by the enemy.

Even more interesting, Chibitty also shared anecdotes from their enlistment and training. He explained that they even had to create Comanche code words for "bomber" and "tank." These are words that did not exist in the Comanche language.

For the Amateur Radio Newsline, I’m Norm Seeley, KI7UP.
--

Chibitty is a decorated veteran and the last surviving member of the 16 Comanche Code Talkers. You can read more at http://hraunfoss.fcc.gov/edocs_public/attachmatch/DOC-228074A1.doc (CGC Communicator, FCC)

**

NEWSCAST CLOSE

With thanks to Alan Labs, Amateur News Weekly, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB and Australia's Q-News, that's all from the Amateur Radio Newsline(tm). Our e-mail address is newsline @arnewsline.org. More information is available at Amateur Radio Newsline's(tm) only official website located at www.arnewsline.org. You can also write to us or support us at Amateur Radio Newsline(tm), P.O. Box 660937, Arcadia, California 91066.

For now, with Bill Pasternak, WA6ITF, at the editors desk, I’m Jim Damron, N8TMW and I’m Jeff Clark, K8JAC, saying 73 and we thank you for listening."

>Message-id: <20021122191410.24143.00000117@mb-cv.aol.com>

>Steps to better Amateur Radio

>1. Get rid of the word "Ham"

Why?

>2. Get rid of excess codewords.

What "codewords"..? EVERY hobby has some sort of activity-specific language...NASCAR, hang gliding, skateboarding...WHAT about Amateur Radio do you not understand? WHAT about Amateur Radio is too confusing for you?

>3. Discourage cults such as Wouff Hong

It's not a cult.

>4. Encourage Amateurs to not have their lives revolve around "Hamming".

...or hang gliding...or church activities...or sports...or television...or...

>5. Encourage Amateurs to lose weight.

You, of course, are the picture of health? You picture is on WHAT fitness magazine?

>6. Get more females, young people into Amateur radio.

How? Draft them? Club them and drag them into the cave, Tarzan? Maybe a centerfold of the month? Some snappy little 18 year old in a thong, seductively fondling some peice of Amateur gear each month?

>7. Get rid of QST and bring back Ham Radio magazine
> (but change the name to Amateur Radio magazine).

The "name" didn't have anything to do with the failure of the magazine, Anonymous One...The lack of general appeal did. QST has that. You'd get rid of QST for WHAT reason?QST embodies, to one extent or the other, ALL the ideas and programs you suggest, "Vshah". Perhaps if you paid more attetnion to the CONTENT of the magazine, NOT just all the pretty pictures!

>8. Get more people involved in: Homebrewing, radio direction finding,
>troubleshooting, use of test equipment, antenna building.

Those activities are open to any person (now) who cares to do them. What are you going to do? Make it a "requirement" to do the things YOU like to do to be a "Ham"?

>9. Positive publicity - positive publicity spots in newspapers, etc.
> Endorsements by celebrities, Amateur radio in movies.

Got money?

>10. More clout with politicians.

Got more money?

>11. Stress educational benefits, such as geography, etc.

That's already there, but YOU would undermine the ARRL in that pursuit. The ARRL sponsors numerous scholarships and encourages further technical experimentation. It's already a "happening" thing, Anonymous One.

>12. Collaboration with EE education and IEEE, not separation from them.

Where do you get this stupid stuff, "Vshah"...? No wonder you want to remain anonymous...I would too if I was making these many silly statements in public!

>13. Real development activities through Amateur radio clubs.

You mean like sponsor different activities through encouragement, support and experimentation...?

OOOOOPS! It's called the ARRL "Special Services Club's Program". Guess you missed it!

>14. Real tests of viability of certain modes by getting large numbers of
>people
>to test them.
>(Could be done in a contest).

Already being done.

>15. Get rid of the Morse code requirement.

Why? What will eliminating the Morse Code requirement do that the present licensing structure doesn't already provide?

P-L-E-A-S-E don't come at tme with all that rhetoric (already said, done, and proven false) about how all those people will knock down our doors to get licensed. "Novice Enhancement", The No Code Tech and "Restructuring" all promised to do the same thing. Present licensing already allows access to 97% of all Amateur allocations.

>16. Encourage an adequate number of coders - but don't tie this to the
>license
>classes.

And if we drop the complete code test requirements, "encouraging coders" will be just like "encouraging" the other pursuits you mentioned above...You

can lead them to water, but if you try to make em drink you'll only drown them.

>17. Morse certificate for 5 wpm, Morse with distinction for 13wpm

Already got that...It's called the ARRL Code Proficiency Certificate. You can get "distinction" as fast as you can go up to (I believe...) 45 WPM.

>18. Real license preparation classes to understand the material.

>19. Non-question pool format for written tests.

Two things we can agree on.

>20. Call the license classes Novice, Intermediate, Advanced instead of
>Technician, General, Extra

Why?

>(Clearer terminology and more respectful of achievement).

Why? Why not call them "Studied a Little", "Studied More" and "Studied a Lot" if that's what you want to achieve...? "Class C, Class B and Class A are even less offensive.

>21. Simpler "Operator" class that does not include practical circuits.
> (I bet with a more difficult test, many coders will end up here
>instead
>of Extras).

Why? I came up through the "old" test system, and studied/practiced hard in both parts. Why did code have anything to do with a siomple "operator" test? That's where most of the present "NCT's" are anyway....they are mostly just mic operators, too.

>22. Real Emergency communications training,
> (must demonstrate on actual equipment), instead of just written test.

WHAT in the heck are you talking about...?!?! First of all, as much as some try to downplay it, Field Day is all about learning how to move a radio station into a "field" enviroment, then operate it there for a period of time independent of the commercial power system or "prepared" station enviroment. The "contest" part of it allows you to have fun doing it!

Secondly, WHAT "written" test are you talking about? The ARRL's new "Emergency Communicaitons" program on-line? That, Anonymous One, is only a year old. The other 70+ years we've been doing it the "practical" way.

>23. Field day preparation meetings so everyone can do their best on field
>day.

Already happening. Do you think these multi-opertor/multi-transmitter stations that look more like a military operation come together just because a lot of guys meet at the local diner one day and say "let's just throw something together"...???

Sheesh!

>24. More real skill building activities

Such as? "Vshah", you really need to read something OTHER than RRAP to learn about what's going on in "Ham" radio beyond your obviously limited sphere of awareness. You need to read "QEX" once in a while.

>25. New awards. Instead of WAS and other volume based awards, recognition for >WAB(Worked All Bands), Distance awards, station setup time awards, etc.

You are constantly harping on the "WAS" thing, so I can only assume it's because you are an NCT with no immediate intention of upgrading.

That's a poor excuse. There are many folks who have WAS and DXCC on 50mHz and above only bands.

First of all, for your "WAB" idea, contesters and award chasers have purposely left certain bands out of routine awards to intentionally limit the activity to certain bands, thereby not "forcing" contesting-like operating on disinterested operators.

However there is 5BWAS (working WAS on the "traditional" bands, 80,40, 20 15 AND 10 meters), as there is 5BWAZ and 5BDXCC.

If you'd like to create a "new" award, I suggest you give it some thought, then talk to K1BV over at "CQ Communications". He has a book on the subject of awards that is pretty close to all-inclusive.

As for "distance" awards, I suggest you read QST a bit more thoroughly. There ARE standings for distances-worked, expecially for those who operate V/UHF.

A "distance" award on HF is moot. One QSO to Australia and you've done all you can do for "distance" on HF. There are several clubs that sponsor awards for ever-lower power QSO's for distance-worked. Again, I suggest you contact K1BV at CQ.

Lastly, Field Day is the ideal opportunity for "time to set up stations" awards. But who's gonna umpire that? I can throw a wire in the trees, drive a ground rod and be "on the air" with a "competent" station in less than 5-10 minutes. You gonna get "Samantha" from "Bewitched" to tweak her nose and pop a full HF field station up for you?

More than 50% of what you "suggest" for Amateur Radio is ALREADY a "happening thing", "Vshah"...YOU just need to pay more attention to it! Again, I suggest that your ignorance and unwillingness to expose yourself as being as uninformed as you obviously are, as reason for your anonymity...Perhaps if you'd ASK more instead of making wild assertions what ought to be...especially when your "suggestions" are already FACT.

Part of the FCC's reasoning, at one time, for the use of a "novice" identifier (WN, KN and WV callsigns) was to make it apparent that the novice licensee was just that...a novice...Not to "redicule" or otehrwise tease a person about their "newness", but to give them a helping hand. Perhaps we need to as the FCC to reinstate that? "Training Wheels" for the newly licensed?

"Vshah" needs SOMETHING so he can get some help.....

73

> it is a rather hateful speech you speak just because you
> cannot take strong opposition to your viewpoints

What "opposition to your viewpoints", Lennie? You lie, you distort and
you fabricate. That's not "hateful speech", it's a matter of archived facts.

>But, it is no doubt satisfying to the insecure who cannot
> abide a strong argument to their golden viewpoints of faith.
> Shrug

A bit of sage opining from one who is himself insecure.

Cute.

A dark day in American history, but not relvent to Amateur Radio, even in
any reasonable analogy.

So why bring it up, save to obfuscate your lack of substance?

Steve

1804. Re: 7 steps to improve ham radio.

Newsgroup: rec.radio.amateur.policy

Source record: 55884

Steps to better Amateur Radio
1. Get rid of the word "Ham"
2. Get rid of excess codewords.
3. Discourage cults such as Wouff Hong
4. Encourage Amateurs to not have their lives revolve around "Hamming".
5. Encourage Amateurs to lose weight.
6. Get more females, young people into Amateur radio.

7. Get rid of QST and bring back Ham Radio magazine
(but change the name to Amateur Radio magazine).
8. Get more people involved in: Homebrewing, radio direction finding,
troubleshooting, use of test equipment, antenna building.

9. Positive publicity - positive publicity spots in newspapers, etc.
Endorsements by celebrities, Amateur radio in movies.
10. More clout with politicians.
11. Stress educational benefits, such as geography, etc.
12. Collaboration with EE education and IEEE, not separation from them.
13. Real development activities through Amateur radio clubs.
14. Real tests of viability of certain modes by getting large numbers of people
to test them.
(Could be done in a contest).

15. Get rid of the Morse code requirement.
16. Encourage an adequate number of coders - but don't tie this to the license
classes.
17. Morse certificate for 5 wpm, Morse with distinction for 13wpm

18. Real license preparation classes to understand the material.
19. Non-question pool format for written tests.
20. Call the license classes Novice, Intermediate, Advanced instead of
Technician, General, Extra
(Clearer terminology and more respectful of achievement).
21. Simpler "Operator" class that does not include practical circuits.
(I bet with a more difficult test, many coders will end up here instead
of Extras).

22. Real Emergency communications training,
(must demonstrate on actual equipment), instead of just written test.
23. Field day preparation meetings so everyone can do their best on field day.

24. More real skill building activities
25. New awards. Instead of WAS and other volume based awards, recognition for
WAB(Worked All Bands), Distance awards, station setup time awards, etc.

In article <20021122203509.24143.00000118@mb-cv.aol.com>, vshah101@aol.com (Vshah101) writes:

>Both the General Exam and Technician exams use question
>pools and are very easy.

For almost 20 years, all of the written exams have used published question pools. If you don't like it, argue with the FCC.

They are "very easy" if a person knows the material. They are not very easy to all newcomers.
>
>The Only Coders like the current tests because they can get the Gereral
>licence with not much more effort.

What is an "Only Coder"??
>
>>>I would upgrade if the code requirement was eliminated. I believe many
>>>others
>>>would too.
>>Thats a given, thats how all you CBplussers got here in the first place. But
>>as
>>usual you want more dumbing down to occur, just so you can upgrade.
>
>Are you calling ME a CBplusser? Thats generalizing.

What license do you hold, Vshah101? What is your callsign?

> Perhaps learning Morse code
>at the exclusion of the material is the dumbing down of Amateur Radio.

Nope. The written exams have changed independently of the code test. Example: Before April 15, 2000, getting a Technician required taking two separate written tests totalling 65 questions. Now the Tech requires a single 35 question test. No code test in either case. It's not the fault of new hams or old hams that FCC made that change.
>
>You made the claim that No-coders are CBplussers. Your claim was just an
>accusation.

He's just name-calling.

>So, I can make a similar claim: Perhaps many of the "Only" Coders
>want HF, but don't want to learn the material.

>Lets repeat my challenge again.Lets make the test non-question pool, so its a
>little challenging and no longer nontrivial.

I'm all for that. Now how are you going to convince the FCC to change the rules and make the tests secret again? That's the real problem.

If you can't get FCC to go along, it's not going to happen.

>Then lets get rid of the code requirement for General class.

Code testing is all but gone right now. 5 wpm, receiving only, all kinds of accommodations. S25.5 prevents total elimination.

Again, how you gonna convince the FCC?
>
>The result is that many "only" coders will not upgrade since it will takes
>some effort, when currently it is a trivial amount of extra effort.
>
>Then lets see how many "only" coders become Extras.

I got my Extra back in 1970, when the written tests were secret - no question pools. Getting to Extra back then meant taking 4 separate written tests and at least 4 separate code tests (13 wpm sending, 13 wpm receiving, 20 wpm sending, 20 wpm receiving). Ancient history - things aren't going back to that way.

Here's what "Vshah101" is really saying: He won't learn enough Morse to pass the 5 wpm code test, but he would be glad to impose written tests of far greater difficulty on all hams.

>They are "very easy" if a person knows the material. They are not very easy
>to
>all newcomers.
The few young people that took the exam passed it after a one day license class, according to my local Ham club. The test is easy to all newcomers.

>What is an "Only Coder"??
This is the person that got into Ham Radio, for HF, contesting, ragchewing, etc and did not want to learn the written material.

The only coder then learned Morse code. The only coder did not learn the material, just memorized the questions in these one day license preparation session.

Since it was not too much effort, they can upgrade to General and Extra and gain those bragging rights.

The only coder often brags about how they are superior to no-coders and accuses no-coders of being CBplussers, when this may not be the case at all.

The only coder takes over Ham Radio and tries to pressure newcomers and Technicians licensed to learn the code.

>What license do you hold, Vshah101? What is your callsign?
I have a Technician class Amateur Radio license. I will upgrade to General if the code requirement goes away.

>Here's what "Vshah101" is really saying: He won't learn enough Morse to pass
>the 5 wpm code test, but he would be glad to impose written tests of far

Correct. Morse code is irrelevant and it takes a long time to learn.

Are you talking about FCC Rules violations or "traditions" of amateur radio when you say "flagrant violators obviously need to be turned in though." I don't believe in "correcting" the practices of newcomers--as I've heard oldcomers using non-traditional practices as well. However, rules violations should be pointed out--more for the individual's protection than anything.

I have heard even people like Jim Haynie come on the air down here and correct people for the following:

XXXCall, from XXXCall.
(pause to wait for response)
XXXCall, from XXXCall.
(pause again)
Station not heard, XXXCall clear.

The correction Haynie made was that "station not heard" is not used on VHF frequencies [he may have even said ham radio, but I think he stated VHF]. Well, it may not be used by Haynie or people he respects and likes to communicate with; but there is no rule saying a person cannot end their call with "station not heard." In fact, I personally think it's rather proper and sends the message to all listening that the call is done, end of transmission. It also tells the person being called (in the event they are responding but not being heard) that they are not being heard.

> >
> > When I was initiating my on the air experience I was corrected, it

seemed
> on
> > a daily basis. I didnt' get my hackles up, I payed attention. Perhaps
> we
> > need some more of that...eh?
> >
>

Were you making rules violations to be corrected? Here's the thing: if someone gets on the air and starts saying, for instance, "10-4," so what? I might say something to them at a club meeting or an eyeball meeting, but I'm not about to jump on the freq police bandwagon and let that person know that "we don't do that on ham radio." Like I said, I hear oldtimers doing that and many other things that are considered "not amateur radio." I'd rather spend time communicating with someone than get into a difference over semantics with them about how they communicate. I don't care if someone says "yeah" "10-4" or "rodger dodger." If they are letting me know they heard the transmission and understand what I said, I couldn't care less about how they say it. And, the funny thing around here is, you'll hear the voice of someone whose identity is known very well, come on and make a correction of another and then end--WITHOUT a callsign ever being given. Or, typical even more is, the oldtimers will jump onto frequency making a call, right in the middle of a whole host of other people who've been ragchewing. See? It's just a matter of what mountain you choose to battle. Rules violations should be cautioned against. Communication standards in every day communication, though, is no big deal--in my opinion.

If you're talking about any other than rules stuff, I'd say you enjoy being the frequency police. Just an observation.

I agree that 5wpm isn't all that tough for many people, but learning technical
competency with a REAL technical exam would be a better allocation of time
for newbies. Exclusive clubs based upon anachronisms isn't helpful. Exclusive
clubs based upon competency, public service and even creating a larger
'technical' gene pool isn't a perfect thing, but much more socially justifiable than
'secret handshakes' like Morse code.

Hi Dee:
That's exactly where I believe the focus should be for amateur radio licensing. I don't think the inclusion of a "mode" test (whatever mode it may happen to be) proves a thing for amateur radio licensing.

However, if there could somehow be included a test of skills that *will* absolutely be needed, then we'd have a much better system. The problem, as has been pointed out, is: how does the testing method accommodate ease, even and fair judgement of right or wrong, etc. If a testing process were introduced that does away with CW and replaces it with something like soldering, or putting together an APRS/packet station, or programming some radio or something--the VEs now have to make provision for having things like soldering guns and pieces of coax, etc. You get the picture.

I think it would be absolutely g-r-e-a-t if CW testing went away and was replaced with something that proves far more in practicality and at least *some* knowledge that will be used, indeed must be used, for good amateur practice! I would even go for the written exams being much tougher, not multiple choice, and certainly not having the question pools available. I didn't "study" for my licensing; I memorized. And, for instance, I could never remember frquency ranges/numbers, so I completely disregarded that part of even the memorization and super-guessed any that I encountered on the exams. Do I feel bad for that? Hell no. The structure allowed it, and I can look up things that I need to know.

Well, that's my two cents worth.

And that's like saying "I only want to learn what I want to learn for my license test, and that doesn't include Morse code, even though it is a requirement".

> The fact is that more and more of the radio receiver functions in the
> future will be done digitally.

Only *some* receivers. Generally built in factories by electronic professionals, not your average homebrewing ham. Yes, those receivers are marvelous. And demanding of advanced technical skills not found in the general amateur radio population, nor likely to be found there in the future where testing requirements don't demand such skill and knowledge. That's to be expected since only a small portion of hams are professionals who have that advanced training and skill. Far more are skilled at such "archaic" but very effective communications modes as radiotelegraphy. Many of those hams also are users of advanced digital modes, but few are trained in the development of those modes. Most are just happy to be users of them. That doesn't mean there are no technical skills among the general ham population. It DOES mean that technical skills among hams are far more likely to lie in other than the latest djgjtal technology. I don't see that changing as long as simple tests are all that are required for entry into ham radio.
While new hams who are serious about learning to engage in their newfound pursuits, few have the background to leap onto the digital design bandwagon. I believe fact that will forestall any great amount of digital design work by hams other than the smaller portion of the hobby who are already so engaged.

There are two main reasons:
> it's more flexible, and it is easier and more repeatable
> to manufacture digital ICs than analog ones.
> In cell phones, in cordless phones, everywhere that radio
> technology matters, digital is more and more used.

The operative term here is "used". Hams are more and more users of advanced technology and less and less designers. Most design by ordinary hams is at a level of technology below digital design using advanced ICs. I can't imagine why this should be surprising to anyone. Bu it always seems to bring forth dire predictions for the demise of the ARS

because of it. Won't happen. Our future is far more dependent on our emergency communications capabilities, and that demands little or no digital design skill.

> If you refuse to learn digital signal processing, pretty soon you will
> understand about 5% of how a receiver works; the rest will be digital.

Only the design of the newest receivers. Pure digital radio is still far in the future, save a niche element which is normal for advancement in the field. Analog radio is far from being ill, and very far from dying.

> Of course, you will still be able to use code on archaic equipment,
> but amateur radio should look forward, not backward.

That's your opinion, shared only by other similarly situated technical types. Most of us hams believe we should look both forward *and" backward. We have a great heritage and most of us won't forget where we came from and how we got here as we move into the future.

>And you really think were getting that now with the Dumbed Down writtens.
Seems like most Hams want it to be dumbed down.

Few clubs, Hamfests, Conventions emphacize technical competence.

The clubs mostly have just meetings.More active clubs with real activities,
training classes, field day preparation would improve the technical competence.

The activities can include: Homebrewing, radio direction finding, tuning
receivers, antenna building and adjusting for SWR, test equipment operation,
using the digital modes, setting up stations for field day.

They are not and never have been our governing body. They are merely the
largest ORGNIZED group of amateurs. Thus we can have some clout in the
political arena and get heard by government policy makers.

Note that ARRL did not "take over" testing duties. There are many VECs
accepted by the FCC. All the VEC organizations have to meet with each other
on a regular basis and agree to each question pool, how often that pool is
changed, whether it is multiple choice, etc. If ARRL had "taken over,"
they would be in sole control of the testing. They are not. There is W%YI,
SANDARC, and a half a dozen or more other organizations.

I've been a ham for 50 years and an engineer for 43 years and
I still can't solder a PL-259 to RG-213.

I was being sarcastic and trying to point out that the same argument can be used for anything that a person doesn't want to learn. Personally I happen to think that there should be more basics included in testing. For example, I think every ham should have to demonstrate that they can solder a connector to a coax successfully. However they don't have become soldering experts.

Check Your Stats:

On a per capita basis, the ham radio community is shrinking and going nowhere. And on a per capita basis, Japan has twice as many ham radio operators as the United States.

The ham radio community is 50 years behind the times by holding on to this code thing.

The ham radio community has a very negative public image, so women and young people wouldn't take part in a hobby that's dominated by semingly bunch of old farts totally lacking in basic social skills.

Would you want to spend a Saturday evening having dinner with a ham radio operator?

I don't think so!

Hey guys, it is 2002, not 1952.

Wrong!!! Morse code is VERY relevant due to the fact that it's a
license requirement to get on HF at this time. When it's not a requirement
then it will be irrelevant, but only to getting a license not to Amateur
radio as a whole.

BTW two months ago I was just a No Code Tech, but I wanted
to get on HF and I did what was required to make it happen.
Stop whining and do some work!

Actually Kim that is not a bad idea. Although not a new one. The old 'Communist Block' nations used a similar system. Also one had to actually accomplish specific things on the air to be able to upgrade. Example; work 20 countries on CW, log 250 cw stations to even apply for a ticket. ETC. These are just off the top of my head and just a representation of what I was told went on.

As for the US system I think it is actually detremental. Considering the on the air stuff you hear (at least on HF) something is lacking somewhere. When a Extra class operator can't even figure how to cut a 1/2 wave dipole then we are in trouble.

Correct. Considering that a major reason Amateur Radio is permitted is to be able to provide emergency communications when needed.

Knowing CW just adds to the individuals ability to provide it.

5 WPM is adequate. Those that want to go higher can. The others can stop their whinning since they wont 'have to'.

>forbid that eh????

Don't get me started on the publicity issue -- again! I've dropped that
wrecking ball on the head of any ARRL official within earshot for the
last several years -- usually with the same reply: If you want the
ARS publicized, YOU'VE gotta do it! Right. I'm going to place ads on
prime-time TV. I'm going to make Public Service Announcements on
broadcast radio and cable TV channels. I'm going to put half-page
ads in the major newspapers. Right.

What we need is mass media advertising. I've already suggested that
one way to get it is to enlist the services of ham celebrities, who have
contacts in the media industry and the talent to produce advertising
messages that will appeal to a young, technically-involved group of
potential new hams. With the ARS in what can only be called a state
of decline, I believe that the ARRL needs to make public awareness
of amateur radio it's Prime Directive. They need to reduce QST
magazine to a newsprint rag with black-and white photos, the need to
eliminate virtually all paid HQ positions (particularly the lady who came
up with the "Diamond Club" turkey), and take as much of their
overhead as possible out of the budget -- and throw that money into
a national, mass-media publicity program. Each and every ham
who is an ARRL member should then be asked to contribute the
exact sum of $100 to further finance this effort. I myself would send
the first check, as long as all of the previous steps had been already
taken.

Your right and your wrong Kim. Traditions and operation proceedures are
important parts of radio operation. And of course rules are rules.

I think what is being discussed is blatent violations of what is considered
'normal ham radio etiquite'. Perhaps by todays standards somewhat
antiquated but still necessary.

Using ten codes on ham radio is improper. Why? because we dont do that.

See what I mean? traditions do count for something.

All of which will change I am sure. As for Mr. ARRL......he reminds me of
others that spend most of their time off the air...grin.

That description of the Code fits the outsider viewpoint exactly. I'd
guess that more than half of the new 5 word-per-minuters cannot copy 5
wpm so there's hardly a secret society mentality. Last I remember the
code test was a multiple choice thing that doesn't even require solid copy.
So in some regards the code test is simply a 'trial by fire' and in
reality has been degraded so much as to be moot.
In the meantime, if int'l law says it must be done that way then I guess
one has to comply until it changes if you want to get on HF.

There's NO WAY IN HECK that this bastard Anderson
could have hid out for so long, without the help
and assistance of the so-called "patriot" community.

Perhaps the FED's and FCC ought to pay more attention
to a certain ham radio "Patriot's Net" (3.860 8PM EST),
since numerous transmissions and topics (by licenced and
unlicenced stations) were heard while monitoring this net
over the course of the past 2 weeks - and these topics
seemed to be *very concerned* on "activity" the same area of
N.C. where Anderson was caught yesterday. Coincidence??

Good job America's Most wanted. Good job BATF.
Good job and help by the ADL and Mark Pitcavage.

One down - MORE to go....

http://www.courier-journal.com/localnews/2002/11/23/ke112302s318493.htm

A tip received by ''America's Most Wanted'' and forwarded to federal
officials
led to the arrest of Kentucky fugitive Steve Anderson in rural
Cherokee County, N.C., yesterday, authorities said.

Anderson, a white supremacist who operated an illegal radio station
from his Pulaski County home, had been at large since allegedly
shooting at a Bell County sheriff's deputy on Oct. 14, 2001.
He was arrested in the mountains of southwestern North Carolina
by the Bureau of Alcohol, Tobacco and Firearms and the North
Carolina State Bureau of Investigation.

''It's a relief he's been taken into custody, especially without
incident,'' said Don York of the ATF's Louisville office.
York said the ATF captured Anderson entering a
residence, but he declined to elaborate.
Anderson was being held last night in Asheville, N.C.,
pending his transfer to Kentucky, authorities said.

York said the television program received a tip about Anderson's
whereabouts after airing its second segment on him about a month
ago. The tip was forwarded to the ATF, which worked the case
with North Carolina authorities.

Anderson is accused of shooting an automatic weapon at
Officer Scott Elder, who had pulled Anderson's truck over north
of Middlesboro for a traffic violation. Elder was unharmed after

Anderson allegedly opened fire, although his cruiser was struck about 25 times.

Police said Anderson then drove into the mountains, and a search of his property turned up explosives and guns. Anderson had attracted attention in Pulaski County several years ago by playing host to a small Ku Klux Klan rally during which a cross was burned. He also operated a shortwave radio station out of his home, where his commentary against blacks, Jews, immigrants and the federal government drew the attention of the Federal Communications Commission.

The Anti-Defamation League complained to the FCC about Anderson's broadcasts, and the agency eventually rescinded his license. Anderson continued to broadcast despite the FCC action.
Anderson was a member of the Kentucky State Militia, a civilian paramilitary group, until April 2001. The militia said it dismissed Anderson because he refused to shut down his radio operation.

According to the Anti-Defamation League, Anderson also has ties to the Christian Identity Movement, a loosely defined group that claims Jews are the offspring of the devil. Anderson also allegedly threatened an Eastern Kentucky newspaper editor who included him in a series on hate.

The ADL's director of fact-finding, Mark Pitcavage of Columbus, Ohio, said he was glad that Anderson had been caught, ''because he was a dangerous man who had already shot at a police officer and threatened more violence in his radio show. For public safety, it's a good thing.'' Pitcavage said the capture also was gratifying because ''people in militia and extremist groups *admired he wasn't caught*.''

Bell County Sheriff Harold Harbin said: ''It's good news. I knew eventually we'd catch him. It sends a message you can't get away forever.''

Its just like a war story. Everyone remembers it differently..hi.

One minor correction tho Brian. Incentive licensing came about in 68...yes...but it wasnt till around 72 or 73 when the 75 meter band was extended below 3.800. I was in Germany at the time and was wondering why the Geritol net was in the DX window....

Your right on the Advanced thing. You see I missed that...I was in no position to keep up with ham radio at that point. I was in NAM.

As for my comment about losing most of my privlidges...well to me it was. I was CW only on HF after coming back from the war games and my 7010 rock was all I had.

1849. Re: 7 steps to improve ham radio.

Newsgroup: rec.radio.amateur.policy
Date: 2002-11-23 17:26:38 UTC
From: paulfriedman@attbi.com
Message-ID: <iTOD9.91392$__1.53589@rwcrnsc51.ops.asp.att.net>
Source record: 56037
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.misc,rec.radio.amateur.policy,rec.radio.cb

Just for the record, Bill, the code test was changed to fill-in the blank.

As a new ham (licenses 13 months -- I sat for all 4 elements at once), my feelings re CW requirements are mixed. It is certainly a key part of the history of radio and our hobby. It is certainly a valid communications mode. My objection to the 5 wpm is that it is basically neither fish nor fowl. Studying to pass a 5 wpm receive only test is not the way to learn code. A valid agreement can be made, in fact, that it is exactly the wrong way to learn code. (At 5 wpm receive only, the best way to pass the test as quickly as possible for many people is to "see" the di dahs in one's mind and translate character by character. If there is a worse way to learn code in a way that building receive speed and learning to send, I can not think of it.

Purely theoretically (treaties and such aside), I would have little problem with a send/receive test at a reasonable minimum speed (10 or the mystical 13 wpm) or eliminating the CW test completely. As currently constituted, the U.S CW test results, I think, in REDUCING interest in learning CW.

Regarding the written tests...
It would help if the VEC group found an educator to review the tests. I haven't looked at the new Extra question pool, but the old one would never pass mustard as a beginning Ed. course Too many of the wrong answers are clearly wrong merely by reading them without any knowledge of radio theory or regulations. Too many of the right answers have an easily memorized pattern. Please note that this is comment in no way addresses WHAT subjects should be in the test nor to what depth - merely a comment on the quality of the questions. That said, I do recognize that writing "good" multiple guess questions is extremely difficult.

Finally (for anyone bored enough to read this far), by far the most difficult task I faced in becoming a ham was learning to solder 259s. One aspect of voice communications I have yet to learn (more accurately "have not been willing to learn") is referring to my self in the first person plural as in "We have been licensed since 19xx and we feed our XX with a YY."

I like it too, but I just gotta add this before
someone else thinks of it.

First Class------Extra Class
Second Class---General Class
Third Class------Coded Technician

Fourth Class-----No-Coded Technician
No Class------- CB Freebanders

;^)

What? You mean an Extra cannot even put up a dipole? I thought since an Extra passed the code test they are no longer CBplussers and must automatically be better Hams.

In the early days this was true, but not very much anymore.

Once you have a "high level language" compiler, you can write the next
version in the compiler language; these days mostly C.

Simple example; the GNU C and C++ compilers have been written in C and
C++ for many years now as have most compilers and operating systems.

While assembly is still used somewhat, it is nowhere as pervasive as it
once was.

My license does not say CBplus on it. Who is the real CB plusser, the Technician class that understands the Material or the General or Extra that does not?

You yourself said the written test is a joke, so all the only-coder Extra has is the code. This makes this type of Extra a CBplusser, since they know CB, PLUS one single manual encoding scheme mode.

I'm talking about your operating any mode on 7037. Tech Plus privs on
40 meters include only 7100-7150. I think you knew that already Kim
;-)

> I would not
> have to upgrade, though, because I have a Control Op sitting right
> here...heh heh
>
Except that you would not be operating - the control op would be
operating, and you'd be a third party. Same as if you had no license
at all. The term "operate" has a specific meaning in the rules. i.e.
to be the control operator. Anything else is third-part stuff.

Which has some odd consequences. For example, a third party using a
control op can't work a DX station unless there is a specific third
party agreement between the DX station's country and the USA.

But I'm pretty sure Kim knew all this stuff.

Your control op could get in some hot water for working 'phone on
7037, tho.

Dee, there are a few in here who have put down everyone not in their "superman" amateur morsemanship class...especially those not yet licensed in US amateur radio. On the basis of such well-established self-defined radio experts' postings, griping about lack of respect of their exhalted extra class shows only how badly the class distinction has become in US amateur radio.

There have already been two separate class "suggestions" posted in here, longer than Ryan's and far more sarcastic in addition to being downright funny. Was so long ago that it couldn't be found in Google archives. Those also elicited a long howl of outrage from self-important extras. :-)

>> However, I consider CW one of those basic skills that should be kept and
>> tested on.

Part 97.1 has five paragraphs defining US amateur radio service.
"Emergency communications" is a general statement and only
one of those five. Now go back in time to find the actual, real
emergency communications provided ONLY by morse code
modes IN the US amateur radio service.

Nowhere in Part 97 does the FCC mandate morse code modes
over and above any other allocated mode on any allocated band.
All allocated modes are optional to use by any US radio
amateur. But...morse code mode is the ONLY mode having a
separate pass-fail test for any license having below-30-MHz
privileges. NONE of the other modes have ever had a separate
pass-fail test elements. None. Not even required by the three
other US radio regulating agencies that preceded the FCC.

There is no logical reason to keep the morse code testing for any
US amateur radio license...except to satisfy the emotional needs
of long-time amateurs who insist that all newcomers pass the
same tests as they did. Do you wish US government to satisfy
the emotional needs of a select minority group of citizens for a
hobby activity?

>was told went on.

One could take that even further...require nice, distinctive
uniforms, hold formations at club meetings, march in town
parades playing rettysnitches and beating drums with whouff-
hongs. Eventually you would want to carry arms and, on a
special night celebration, go through the business districts
and smash in the windows of electronics stores selling the
hated, perverse CB and GMRS radios.

That would show that you CARE and that ham radio Means
Business!

While there is historical precedence of that, the outcome was
not pretty.

>As for the US system I think it is actually detremental. Considering the on
>the air stuff you hear (at least on HF) something is lacking somewhere.
>When a Extra class operator can't even figure how to cut a 1/2 wave dipole
>then we are in trouble.

If someone cannot do the simple arithmetic of dividing 468 by
frequency in MHz, then they are not able to function in greater
society with sufficient skills.

It's quite another problem to hold that dipole up, to raise it
without inflicting injury. See the recurring accidents on antenna
installations by radio amateurs in the publications.

Take heart. Once an amateur radio antenna is up, it apparently
survives high winds and tornados that always strikes down
stronger public service radio service antennas. So I've been told.

Oh, my, everyone must STOP their technical skills accumulation
after building a crystal set and a spark transmitter? Or should they
stop technical skills accumulation with vacuum tube architecture
radios?

Dickiebird is invited to examine the NorCal 30 now under discussion
in rec.radio.amateur.homebrew, comment on the pros and cons of
Dan Tayloe's design (N7VE). The "Tayloe mixer" is unique and
patented, does not use diode junctions at all nor is it an active
device in the normal sense. The local oscillator runs at four times
what is necessary for a direct-conversion receiver. The transmitter
supply is a boost switching converter for transformerless 12 V
out of a 3 VDC battery supply...a digital-analog circuit.

>That's to be expected since only a small portion of hams are
>professionals who have that advanced training and skill. Far more are
>skilled at such "archaic" but very effective communications modes as
>radiotelegraphy.

Yes, if the Titanic 2 is ever built and plies the Atlantic routes
again, mighty morsemen have to be at the ready to save all on
board through code communications. We have been so warned
repeatedly.

>Many of those hams also are users of advanced digital
>modes, but few are trained in the development of those modes. Most are
>just happy to be users of them.

According to past messages in here, the Dickiebird was
twittering angrily about his personal audio DSP filter (designed
by someone else) "not working correctly" due to difficulty in
setting the controls. :-)

Also, earlier, Dickiebird was arguing that "Shannon's Law"
(first published in 1947) was "not applicable to amateur radio."
[a memorable exchange that even mildly-technically-
cognizant would just as soon forget...]

>That doesn't mean there are no technical
>skills among the general ham population. It DOES mean that technical
>skills among hams are far more likely to lie in other than the latest
>djgjtal technology. I don't see that changing as long as simple tests
>are all that are required for entry into ham radio.

The FCC grants permission to transmit RF energy through
radio operator and station licensing. The FCC decides
what it needs to insure regulation and interference mitigation
that is its legal task in US civil radio. So far, the FCC has
not established any guild, union, or academy to insure a
"thorough radio skills knowledge" credentialism to a non-
pecuniary radio activity (hobby).

> While new hams who are serious about learning to engage in their
>newfound pursuits, few have the background to leap onto the digital
>design bandwagon.

Oh? Does the dickiebird twitter for ALL US radio amateurs?

Dickiebird has not yet shown he is cognizant of even middle-
knowledge-skills ANALOG radio. How can he possibly speak
about digital radio?!?

> The operative term here is "used". Hams are more and more users of
>advanced technology and less and less designers. Most design by ordinary
>hams is at a level of technology below digital design using advanced
>ICs.

Once upon a time, vacuum tubes were considered "high-tech"
by the champions of crystal set receivers and spark trans-

mitters. Those very long-ago long-timers-of-their-time
bemoaned the death of ham radio through introduction of such
complicated and confusing technology of triode vacuum tubes!

>always seems to bring forth dire predictions for the demise of the ARS
>because of it. Won't happen. Our future is far more dependent on our
>emergency communications capabilities, and that demands little or no
>digital design skill.

It seems that this "emergency communications capability"
through dickiebird's key-always-with-a-car-radio emergency
set always ready for handling morse comm.

When was the last time that morse code skills aided any
TRUE emergency IN amateur radio?

>> If you refuse to learn digital signal processing, pretty soon you will
>> understand about 5% of how a receiver works; the rest will be digital.
>
> Only the design of the newest receivers. Pure digital radio is still
>far in the future, save a niche element which is normal for advancement
>in the field. Analog radio is far from being ill, and very far from
>dying.

One in three Americans now have a cellular telephone
subscription. Over half of the cell phone handsets are nearly
all digital. That's over 50 MILLION cell phones (little two-way
radios working directly with telephone system). Is that a
"niche market?!?"

>> Of course, you will still be able to use code on archaic equipment,
>> but amateur radio should look forward, not backward.
>
> That's your opinion, shared only by other similarly situated technical
>types. Most of us hams believe we should look both forward *and"
>backward.

Few long-time amateur morseman can "look" in any direction
except scanning the "official" documents of ARRL for their
"heritage" back when on-off keying codings were the ONLY
possible means of radio communication.

>We have a great heritage and most of us won't forget where we
>came from and how we got here as we move into the future.

I come from northern Illinois. I can look forward to more of
Tales From The Morsemen in the future and how morse code
saved the world, amateur radio, and the citizens of Missouri
when the New Madrid Fault starts a quake there. :-)

Exactly. Why should I have to learn about UHF techniques to operate
HF? Why should I have to learn the VE rules if I'm not going to be a
VE?

> Personally I happen
> to think that there should be more basics included in testing.

Actually, all of the testing now is the basics!

> For example,
> I think every ham should have to demonstrate that they can solder a
> connector to a coax successfully. However they don't have become soldering
> experts.

We've been this route before, but here goes:

First off, you'd have to define "coax" and "connector". Think of all
the variations, from RG-174 to Heliax, from SMA connectors to type N.
Would soldering RG-58 to an RCA phono plug be sufficient?

Who judges the quality of the job?

What about those who are physically impaired to the extent that
soldering is impossible or very difficult?

You'd have to deal with those who would point to the wide availability
of crimp-on connectors and automated assembly. They'd say that manual
soldering is an anachronism. Heck, the UHF connector has been around
for more than 55 years!

It's possible to assemble an entire amateur radio station without coax
or soldered connectors, too.

Most of all: Our licenses are for operating, not building or
soldering.

He's simply mistaken.

> Well, it may not be used by Haynie or people he respects and likes to
> communicate with; but there is no rule saying a person cannot end their call
> with "station not heard." In fact, I personally think it's rather proper
> and sends the message to all listening that the call is done, end of
> transmission. It also tells the person being called (in the event they are
> responding but not being heard) that they are not being heard.

Standard procedure on EPA repeaters:

"W!#$, this is N2EY"
(long pause for W!#$ to find the mike)
"W!#$, this is N2EY"
(long pause for W!#$ to find the mike)
"Nothing heard, N2EY clear".

If the repeater was busy, this exchange would have been preceded by
"Call Please" and the correct response would be "Go ahead" as soon as
possible.
"Nothing heard" might be replaced by other phrases, such as "W!#$ not
heard"

There are at least two reasons for the "nothing heard" transmission,
particularly on a repeater:

1) to let others know that it's OK to use the machine, because the
calling station has given it back

2) to let the called station know that he/she isn't making the machine

> > > When I was initiating my on the air experience I was corrected, it
> seemed

> on
> > > a daily basis. I didnt' get my hackles up, I payed attention. Perhaps
> we
> > > need some more of that...eh?

Yup.

> Were you making rules violations to be corrected? Here's the thing: if
> someone gets on the air and starts saying, for instance, "10-4," so what?

It's not proper amateur radio procedure. "Roger" is the proper reply -
and it means "I understand" not "Yes".

> I
> might say something to them at a club meeting or an eyeball meeting, but I'm

> says "yeah" "10-4" or "rodger dodger." If they are letting me know they
> heard the transmission and understand what I said, I couldn't care less
> about how they say it.

Many of us DO care. The way a community goes downhill is for people to
stop caring.

Most of all, having a standard way of doing things makes it easier and
quicker for all concerned. "Roger" is understood by everyone, and
takes only two syllables. No need for anything else.

But if it's not a clear rules violation, the best way to get the
message across is to set an example.

> And, the funny thing around here is, you'll hear the
> voice of someone whose identity is known very well, come on and make a
> correction of another and then end--WITHOUT a callsign ever being given.

That's a rules violation, and should be mentioned immediately. I've
had folks call me on a repeater without a callsign, and if they don't
ID on the second go-round I say "Who is calling me?" Works about 98%
of the time.

> Or, typical even more is, the oldtimers will jump onto frequency making a
> call, right in the middle of a whole host of other people who've been
> ragchewing. See? It's just a matter of what mountain you choose to battle.
> Rules violations should be cautioned against. Communication standards in
> every day communication, though, is no big deal--in my opinion.

Both are a big deal to many of us. But there are ways and ways to
handle both. Rules violations need to be confronted immediately.
Things which are not illegal but which are poor practice should be
dealt with by example. Or maybe a quiet word that doesn't insult the
person making the mistake.

Good ops take pride in doing it the proper way, and learning what the
proper way is. Ryan's obviously one of those.

Dont question it, get use to it, this is the kind of people the Dumbed Down License is attracting. Look at her Callsign w5TIT, which she asked for, then look at her recent use of the English Language. And im sure it will get worse in time, and easily start to become common place on the AIR. So keep them Dumbed Down CBers coming. It shouldnt be much longer till all Ham Bands will sound like CB.

To answer Dan's comment above:
If ARRL added a 3 wpm and a 4 wpm (i.e. a 15 characters per minute
and a 20 characters per minute) segment, then why would anyone
tuning in at the appropriate time think it was QRM? In fact,
they would be looking for exactly what they find...very slow code
practice broadcasts.

When I first learned code I had a set of 78 rpm records
that included code transmission at less than 5wpm. The "very slow"
code sure sounded OK and didn't have any aspect of sounding like
QRM at all.

If, as Dan suggests, someone just thinks a 3 or 4 wpm broadcast is
intentional QRM and sets their DSP...well so what, who cares,
what's the harm?

Cheers,
Bill K2UNK

Word on the street is that Herb, ex- KV4FZ, will make an appearence on 14.313 USB at high noon Eastern time.

A "Roll Call" will kick things off. Controlled by KT4TR and the Colonel will be the first check-in!

Word also has it that Hal Turner, will be making a guest appearrence on 14.313 too. He will be checking in with the help of control op, Kevin Strom, WB4AIO.

Bro. Norton and Bro. Bottle will be tuning in their R-75's. for the play by play.

Will KK4TL be tuning in from his 'frigerator box?

Profit Stair told me so......

>>

Word has it that Lloyd Davies, wannabe, dufus and failure is full of crap!

I "WILL NOT" be on the air at high noon eastern time as that obese pizza delivery boy claims.

Lloyd, you are in big trouble!

Herb KV4FZ

>>to all newcomers.

>The few young people that took the exam passed it after a one day license
>class, according to my local Ham club.

Which test? The Technician, General or Extra?

And not everyone takes the one day cram courses. Most of the hams I know, old and young, actually try to learn the material. Or at least some of the material. And most of the hams I know, old and young, don't stop learning once the license is earned.

>The test is easy to all newcomers.

Have you met all of them? If not, how do you know how difficult the test is for all newcomers?
>
>>What is an "Only Coder"??

>This is the person that got into Ham Radio, for HF, contesting, ragchewing,
>etc and did not want to learn the written material.

What is wrong with getting into ham radio for HF, contesting, ragchewing, DXing or other activities, as long as they are done according to the rules? Those are the reasons most hams get licenses.
>
>The only coder then learned Morse code. The only coder did not learn the
>material, just memorized the questions in these one day license preparation
>session.

I don't know any "only coders", then.

>Since it was not too much effort, they can upgrade to General and Extra and
>gain those bragging rights.

Most hams I know, old and young, upgrade to get the operating privileges.
>
>The only coder often brags about how they are superior to no-coders and
>accuses no-coders of being CBplussers, when this may not be the case at all.

I don't know anyone whose ham license says "CBplus" or "No-code" or "only code". And I know lots of hams.
>
>The only coder takes over Ham Radio and tries to pressure newcomers and

>Technicians licensed to learn the code.

I don;t think anyone should be "pressured" to learn things. Encouraged, yes.
>
>>What license do you hold, Vshah101? What is your callsign?

>I have a Technician class Amateur Radio license.

That's half the answer. What is your callsign? KB9AVE?

> I will upgrade to General if the code requirement goes away.

Why not Extra?
>
>>Here's what "Vshah101" is really saying: He won't learn enough Morse to pass
>>the 5 wpm code test, but he would be glad to impose written tests of far
>>greater difficulty on all hams.

>Correct. Morse code is irrelevant
As KB9TMP so eloquently said:

"WRONG!!!!"

Morse code is NOT irrelevant to amateur radio. Have you ever actually LISTENED to the HF amateur bands? I don't think so.

> and it takes a long time to learn.

For some, yes. But with proper learning methods, most people can learn 5 wpm in a month or so of practice, doing 30-40 minutes per day. That's a total of 15-20 hours.

Whether or not the morse code test is irrelevant is a matter of opinion. But the code itself is quite relevant.

And the material in the written exam can take a long time to learn, too - particularly if one wants to understand it.

--

Why all the resistance to telling us your callsign?

The test is easy to "ALL" newcomers? Then why is there still those that
fail the written?

>The only coder then learned Morse code. The only coder did not learn the
>material, just memorized the questions in these one day license preparation
>session.
>
>Since it was not too much effort, they can upgrade to General and Extra and
>gain those bragging rights.

You should read what you write, V-shunt. That last bit about upgrading to
General and Extra simply because "the test was easy" is absolute idiocity.

>The only coder often brags about how they are superior to no-coders and
>accuses
>no-coders of being CBplussers, when this may not be the case at all.

Stop your assinine broadbrushing, V-shunt. That last comment belongs on
Brucie the Boner's shoulders alone. However, since we are deprived of your true
identity and experience/licensure, it may be true in your case. For all we
know, yo are not even a Novice, let alone any other class of licensee in the
Amateur Service.

>The only coder takes over Ham Radio and tries to pressure newcomers and
>Technicians licensed to learn the code.

Please provide names, dates, circumstances of ANYONE "pressuring" or
"forcing" anyone to learn Morse Code as it pertains to Amateur Radio.

>>What license do you hold, Vshah101? What is your callsign?

>I have a Technician class Amateur Radio license. I will upgrade to General if
>the code requirement goes away.

I seriously doubt that you have ANY license. You ignore the numerous requests to provide your callsign, ergo you remain, for all intents and purposes, anonymous and unlicensed. Both, in my book anyway, render your posts as "uninformed opinion".

>>Here's what "Vshah101" is really saying: He won't learn enough Morse to pass
>>the 5 wpm code test, but he would be glad to impose written tests of far
>>greater difficulty on all hams.

>Correct. Morse code is irrelevant and it takes a long time to learn.

Morse Code is NOT "irrelevent", nor does it take a "long time to learn"...Only the cognitive resources to understand it or the motivation to do it. Anything else is an "excuse".

>>
>> On a per capita basis, the ham radio community is shrinking
>
>Not sure that is totally accurate.

It is totally inaccurate in the USA.

>N2EY can
>perhaps add more historic data to answer state the facts.

Here you go:

1930: US population 122 million, US hams 18,000, 1 ham per 6778 Americans

1940: US population 131 million, US hams 50,000, 1 ham per 2620 Americans

1950: US population 150 million, US hams 90,000, 1 ham per 1667 Americans

1960: US population 179 million, US hams 230,000, 1 ham per 779 Americans

1970: US population 223 million, US hams 270,000, 1 ham per 825 Americans

1980: US population 227 million, US hams 350,000, 1 ham per 649 Americans

1990: US population 249 million US hams 550,000, 1 ham per 453 Americans

2000: US population 281 million, US hams 683,000, 1 ham per 411 Americans

Even using these approximate numbers, it's clear that the trend has been
steadily upwards in terms of population, with the exception of the 1960s, when
the US population boomed but the US ham population virtually stagnated. Most of
the reasons for that low growth had little to do with ham radio itself
(Vietnam, civil rights, baby boom, women's lib, etc).

This info was posted here back on Nov 6.

>> and
>> going nowhere.

As of yesterday, the total number of current, individual ham licenses in the
FCC database was 685,205. That's an all-time high.

It's clear that claims that US amateur radio is "dying" or "shrinking" are completely offbase, and not backed up by any facts.

>That depends on what any one indivdiual wants
>ham radio to be viewed as.
>
>> And on a per capita basis, Japan has twice as
>> many ham radio operators as the United States.
>
>That troubles me not at all.

The JA amateur radio station population has been shrinking rapidly for the past 7 years. The peak was in March 1995, when there were 1.364,316 station licenses. As of March 2002, there were 805,280. More than half a million less.

See:

http://www.ah0a.org/MPT/JA-stations.html

When analyzing JA license data, it's important to look at the station license totals, not the operator license totals. JA operator licenses are free, and never expire. One ham can have as many as four operator licenses on the books (one for each class).The JA operator license totals are an indication of the total number of Japanese folks who have ever had a ham license in the post-WW2 era.

But station licenses cost money and expire annually. They are an accurate indication of the number of hams, because only an active ham bothers to get one.
>
>> The ham radio community is 50 years behind the
>> times by holding on to this code thing.
>
>Agree 100% if you are talking about the code TEST.

You mean that in 1952 nobody but hams was using Morse code?

>I have no problem with anyone wanting to use code as

Absolutely, I agree. And, it's the things like that (antenna construction,
etc.) that would be useful all 'round to the application of ham radio. If I
learn CW to get a license, but don't really care for the mode, I've spent
some amount of time (long or short depending upon the speed at which one
learns CW) on something that I'll never really use. That just doesn't make
a lick of sense to me. For me, personally, I can't see spending what little
time I have away from "duties" to learn something I won't use. Now, on the
other hand, I'm going to need to know how to tune, how to program, how to
connect and install a radio; or I'm going to need to know how to at least
install, if not build, an antenna system; or I am going to need to know ____
(fill in the blank). It'd make a whole lot more sense to me to test someone
on that kind of skill than to test someone on a mode.

> All of which will change I am sure. As for Mr. ARRL......he reminds me of
> others that spend most of their time off the air...grin.
>
> Dan/W4NTI
>

Well, yeah. That's exactly it. Traditions will change as the demographics of amateur radio operators change. It "scares" the longer-licensed hams to see their traditions changing, but I really and truly think the important ones will always stay: courtesy, fun "rituals" (like Wouf Hong, Field Day, etc., etc.), and others. I just can't think of them right now (just got in from five hours of mowing...my brain's rattling).

It's no different, Dan, really, than when my parents are horrified that a sit-down meal with my family is more a treat these days than an every day occurrence. And, it's not as important to me to see that we wear "proper" clothes to the dinner table these days--the times have made it just more important that you "show up"...ya know? It's sad, yeah. It's even a little depressing, but it's just the world we've got today versus the world we had yesterday when life was that much simpler.

Ham radio traditions that make ham radio what it is at the heart, will always be around. But, someone saying 10-4 or "let me turn my house around" (swing the beams, etc.) just isn't a mountain I think I need to spend time on. Maybe for you that's different--and that is certainly OK.

Mr. ARRL. That's a good one! <BIGGER GRIN>

I think for real hams, it depends on what they do with ham radio. For some, it is a service. For others it is a hobby. For still others, it's both. You can't convince me that a die-hard contester is doing anyone a service. You also can't convince me that a die-hard emergency communicator is in it for a hobby.

But, the important thing is that we are all hams.

When the Extra was passed it used to mean something. Now all it means is more dummies in the Extra segement. Sorry, thats the facts of it.

One good thing tho....the bottom 25 of CW is still heaven. Good speeds too.

Message-ID: <20021123192808.10412.00000239@mb-cg.aol.com>
Source record: 56205

You CBplussers shouldnt be offended, you should be proud of your CB heritage, and the fact that you have upgraded to CBplusser status.
Just think if you were not a CBplusser you would have never known what a mic. was for. And you would have never heard terms like, SWRsss,Antenner,DB GAIN, Raiididoo. The fact that you have no Idea what the terms mean is not important, just be proud that you can now impress your CB Buddies.

Yep...sorta like requiring a drivers test without the actual test of your ability to stay alive while on the road and not kill anyone.

One point, and I dont mean to annoy. If you have never actually used CW on the air...then how do you know you wont enjoy it? I have heard many many people tell me that in class. And when they were done they actually enjoyed the mode.

>Dee, there are a few in here who have put down everyone not in
> their "superman" amateur morsemanship class...especially
> those not yet licensed in US amateur radio.

Dee has yet to experience being analogied with the Nazi Party by you, Lennie, as a result of failure to accept YOUR ideas.

Dee, Leonard H. Anderson is allegedly a former "radio engineer". He has no Amateur Radio license, yet pontificates wildly in this forum on how Amateur Radio should be run, both in terms of regulations that affect us and in actual operating techniques.

Leonard, or "Lennie" as I prefer to call him, has uttered countless blatant lies about Amateur Radio in general and some of us who are active licensees in particular. Among his more humourous utterences were those asserting that he was going to get the "Extra Lite out of the box", and his allegations of dishonesty of the American Radio Relay League.

He has now wasted over two and a half years on the licensing promise, and has yet, despite countless demands to do so, provided even one "fer instance" of ANY inappropriate conduct of ANY ARRL official, elected or otehrwise.

>On the basis of
> such well-established self-defined radio experts' postings,
> griping about lack of respect of their exhalted extra class
> shows only how badly the class distinction has become in US
> amateur radio.

No such "griping" about "lack of respect" exist. On the other hand, one of Lennie's favorite tag-lines is to assert how Amateurs are allegedly tied to "rank/title/priviledge", yet signs a great many of his posts with his standing as an IEEE life member or his Branch of Service and former service number from his 1950's era military service.

>Was so long ago that it
> couldn't be found in Google archives

This is interesting, in as much as I was playing with Google IRT this forum and some other threads and found posts from this and other Amateur Radio related NG's going back to the mid 90's. I doubt Lennie's assertion of the existence of the item ot which he refers.

>Those also elicited a
> long howl of outrage from self-important extras.

However not nearly as long a howl from self important ex-technicians who find it necessary to act the fool and antagonize the NG of a hobby for which they have no vested interest.

Beware him, Dee. He's neither honest nor gentlemanly.

The 1933 Johnstown PA floods. And around the same time out in Missouri. I may have the year wrong.

Nobody said a thing about CW use exclusivly in an emergency. I think you need to take a reading improvement course.

Let me try again....knowing CW makes you a better communicator. Especially in emergency situations where it may indeed be the only way to get out.

Have you ever been in a tornado area and tried to use a cell phone? Good luck. Not too many years ago we had a earthquake out in California. The only way I could get through was on CW. Perhaps if I would have bothered on SSB it would have worked also. Whatever.

You are just anti-cw. And you are ignorant of its abilities. Or you are just plain stupid.

It ain't just the new ones with garbage signals. I heard a OT (Old timer) on CW with a serious 60 cycle hum. And the guy he was in comm with never mentioned it.....both were OT's according to the callbook at least.

Another WA4...was blathering away telling everyone to go to hell because he knew his Swan was working right. Never mind that he had a s9 carrier and his audio was hitting it up to 20 over. And when told about it and how to adjust it he just kept right on yappin away...qrming the hell out of all those around him.

Whew, Thank you, Dee. I kind of agree with both of you; however, the process by which we "get" our licenses is meant exactly as you said, Dee.

Once we have them, Jim, they are for what you said.

Semantics, semantics...

Thanks I'll look it over after the WWDX CW contest. BTW I really enjoy your site. Its the best on the web for ham radio in my opinion.

Luckily, I haven't have to do one of those since college. Even then, it was only as part of an assignment to examine memory contents, so I knew what I was looking for. I hope I never have to use assembly language again - but I keep my Kip Irvine textbook handy, just in case.

I really think that Waddles acutally believes his use of calling people
CBers is supposed to make them mad. Is that why you keep using that,
Waddles? It's funny, and cute, but not much more than that.

Offended?! Who's offended there, Waddles? With each and every post you make, you epitomize the term "CBer" in the derogatory slant that you mean it. You've been chided by both sides of the fence here in this newsgroup. And, other than Dan (for what reason who knows) I haven't seen anyone agree with you, align themselves with your opinion, or otherwise.

Now, what were you saying about CB stuff? And, why should someone feel offended by you? Maybe you can help explain that one. Oh, never mind...you haven't enough time or energy.

Well, I went through three phases with CW. In the first phase, I tried learning it in class so that we could start out with 5wpm. I was almost there at the time of testing, but failed. Kept on for about another few weeks or so, took the test and passed. Got on the air a few times while learning it, once the night I passed the test (making me a Tech+). Then, I had to sit through quite a few episodes while my husband learned higher speed for General.

None of us have figured out why, but the monotony of CW (the tone?) really and truly does something to me. It makes me extremely angry and depressed; and I really can't stand it. I love to watch someone doing CW, but can't watch or listen for long because, as I said, it really does put in a miserable frame of mind.

The only thing we (people who know me) can figure, is that it is the drone of it. I discovered that one day when there was a perfectly nice guy on the air; is always on the air around Dallas here. BUT, I can't stand to listen to him for more than a few minutes because he has one of those kind of voices that is monotonous...never changes pitch or tone.

Anyway, that's it in a nutshell. Ever know anyone like that? Twangy guitars do that to me to...I mean really put me in a tailspin for mood. So does the drone of an engine, noise in the office, etc. Anything that "stays the same tone."

You're not really annoying, Dan, although I detect a little bit of a Larry Roll or Dick Carroll or, Heaven forbid, WA8ULX, tone in you. I am hoping I am wrong.

The negative public image stuff--where can we find confirmation of it? The basic social skills part--that can be confirmed where? What kind of socially skilled individuals insults an entire group of people by calling them all "old farts"?

> Would you want to spend a Saturday evening having dinner with a
> ham radio operator?

My wife doesn't seem to mind having Saturday evening dinner with a ham radio operator. The folks who invited us to their home last Saturday evening didn't seem to mind either. I'd think most would rather have dinner with radio amateurs than with rap singers or the Clintons.

> I don't think so!

Isn't it just a whole lot easier to realize that being a ham doesn't a wonderful, good person make? We are all just people. There is nothing miraculous or perfect about any of us. And, to proselytize about the errors of others just doesn't make us perfect, either.

You call this public, Dave? I should have known. I am certainly not the
nose-in-the-air kind of person you are, and I thank my creator for that.

Dee is correct. The FCC considers a US amateur radio license
to be BOTH an operator and a station license. For reference
see Parts 97.5 (b) (1), 97.101, and 97.102.

Tsk, tsk, tsk. A person unlicensed in the US amateur radio
service having to inform a glorious long-time extra class
licensee what is what in the amateur radio regulations! :-)

Hams talk about some strange stuff that is hard to relate to. Invite a non-Ham to a Hamfest or Ham club meeting and ask this person if Hams seem like normal people.

Agree, don't knock it until you have at least tried it. I had a
fellow in one of my Novice classes some years ago that hated
having to learn cw. He came into each class session complaining
about having to learn useless code and left complaining. He
sweated through the test and easily passed. He got on the air to
up his code proficiency so he could pass the 13 wpm and get his
General so he could get on phone and off cw. By the time he got up
to around 13 wpm he was having so much fun that he did not stop at
General but soon had his Extra, and seldom could you get him to
operate phone.

knowing assembly makes you a better HLL programmer. a few years ago there was an online "contest" among friends to see who could write the tightest yahoo chat client. i wrote four clients... using compiler BASIC (one allowing inline assembly), C, C++, and MASM. many of the "C-only" guys [you know, the ones who constantly quote the ANSI (or ISO) C standards like they're the constitution] who bragged about how efficient C compilers were and how obsolete assembler is... could not put out tight code. the guy who put out a really nice C client understood both the hardware and how his compiler (VC++) worked. you can learn a lot by using a disassembler on the compiler's output.

i've heard all the excuses of why not to learn assembly: "assembly is not portable"... well do you plan on porting your code? code is often intimately tied to the gui and OSes API (ok POSIX). "it doesn't matter because we have a 2 GHz CPU"... fine, then go use VB instead... and that is exactly what is happening. why? because 80% of boxes run windows and people want it done yesterday. IMO learning C is easy compared to grasping the win32 api.

i like procedural over OOP because it approximates the hardware better... i prefer Dennis to Bjarne and both to Anders. Gosling and Meyer... don't even ask lol. Kemeny and his contribution were brilliant... he wasn't Einstein's math assistant for nothing... i have one BASIC compiler that is quite good. Craig is right: all languages have their place (of course that place might be the trash can j/k). C is very popular (try to find a haskell compiler for a PIC MCU) but for me it's a love/hate thing because assembler was my first language. Java is always being pushed and while it makes sense for some stuff (Servlets/JSP) it's a dog for general apps.

Just attend a random Hamfest and you will get this impression. Ham radio is 95% male, 50% are old, a high percentage are overweight. Many have vanity license plates with their call signs.

Obcessed, cult like people who want to contest, DX, or do Morse code. Its hard to quantify, but its just strange.

<w4nti@NOSPAMmindspring.com> writes:

>The 1933 Johnstown PA floods. And around the same time out in Missouri. I
>may have the year wrong.

1933 was 69 years ago. In that year radio was only 37 years old
as a communications medium. This is year 2002 and radio is
now 106 years old.

>Nobody said a thing about CW use exclusivly in an emergency. I think you
>need to take a reading improvement course.

I think you need to have some social counseling in Getting
Along With Others...or have you been hanging around
hospitals watching to see if newborns were deliberately
damaged at birth?

>Let me try again....knowing CW makes you a better communicator.

Only if that is the only mode available to use.

In over 49 years of transmitting RF in communications, I've never
had ANY need to know, use, or even design-in any sort of on-
off manual morse coding mode in any equipment...in the military,
in commercial life (in 7 different radio services).

Morse code is slow and both ends of a circuit are prone to human
error, compared to all other modes of communication. Even the
fastest "CW" op can't beat a 100 WPM old-style RTTY. Voice has
an equivalent word rate of 200 to 300 WPM, spoken clearly.

>Especially
>in emergency situations where it may indeed be the only way to get out.

If you look on ebay.com I'm sure you can buy a copy of the
movie "Independence Day." Nice science-fiction where morse
code Saves The World!

>Have you ever been in a tornado area and tried to use a cell phone?

No, only in a typhoon and using 4-channel FM radio relay
working into vehicular HF radio. In tornado areas I've heard
public safety communicators using their vehicular and hand-
held VHF-UHF radios no problem.

>Good luck.

Thank you. [how was your hospital treating you on your day
of birth?]

>Not too many years ago we had a earthquake out in California.

Being IN it (Northridge Earthquake, January 17, 1994), I'm
overly familiar with it. Also the earlier Whittier Narrows and
even earlier Sylmar quake in '71.

>The only way I could get through was on CW.

Your problem, not a problem for the utilities and public
safety communications on VHF and UHF. The Northridge
quake knocked out ALL primary electric power for a region
of 10 million or so population. Fire departments here were
alerted by leased lines (telephone circuits not carried through
switching centers), all the government radios worked fine, and
the downtown emergency communications center activated.
The only hard part was repairing damage and restoring order.

I still haven't heard of any amateur emergency networks that
suddenly leaped into action at about 4:30 AM when all the
primary electrical power was suddenly off. Feel free to
point out the ARRL bulletin which described all of that in
glorious detail...it was missing from national TV news.

>You are just anti-cw. And you are ignorant of its abilities. Or you are

yet? Or are you priming for more insults against others
not agreeing with you?

>One point, and I dont mean to annoy.

But, you do.

>If you have never actually used CW on
>the air...then how do you know you wont enjoy it?

How do you know they will?

>I have heard many many people tell me that in class.

That's wonderful...aren't you pleased? :-)

>And when they were done they actually enjoyed the mode.

Are the US amateur radio rules set up just to make
amateur morsemen happy? Is the US amateur radio
service the living museum of morsemanship?

The FCC is stuck with an ITU-R Recommendation on
amateur license testing and, as far back as 1990, did
not consider morse code skill essential for its purpose
in granting amateur radio licenses. Neither does the
FCC mandate morse code use over an above any other
allocated mode. Manual morse code skill is the ONLY
operating skill EVER tested by any of the four radio
regulating agencies in between 1912 and now. No,
repeat NO other modes were ever manually tested as
a separate pass-fail element. It doesn't make any sense
to continue morse code testing...not even to make old
morsemen "happy" in keeping up hazing rituals.

> male,

Where do you get this stat? That the majority are male is in no dispute. Everyone on my hockey team is male. Most of my friends are male.

50% are old,

50 percent of the human race is over the median age. Half of all people are below average intelligence also.

> a high percentage are overweight.

An alarming percentage of all Americans are indeed overweight. I think it is because they are eating the wrong things (do you know the US nutritional guidelines call for eating the equivalent of three cups of cooked rice a day? And as people decrease the protein and fat in their diets and replace them with carbohydrates, they inexplicably get fat? Oops sorry for the rant.

Point is, if you are trying to use overweight as some sort of personality flaw, I congratulate you on your finely developed sensitivity.

> Many have vanity license
> plates with their call signs.

This is a complaint? I see lots of very expensive automobiles with vanity plates like "DADSBMW" and plenty of odd vanity plates that only make sense to the owner.

Even so, have you ever considered that if you see a vehicle with a ham vanity plate and call the callsign on the 2 meter hailing frequency, they might just answer?

> Obcessed, cult like people who want to contest, DX, or do Morse code. Its hard
> to quantify, but its just strange.

As hard to quantify as figuring out some peoples obsession with all these hams that they don't like.

However, since we are deprived of your
>true
>identity and experience/licensure, it may be true in your case.

I don't know where the "CBplusser" comes from. WA8ULX assumes that only people that use CBs want to be radio amateurs.

I have been homebrewing rf circuits for a while. This, in my opinion, makes me not a CBplusser. WA8ULX's opinion is that if I do not use Morse Code, I am a CBplusser.

I do not need to give out my call sign. Like I said, I am not a "Ham" and do not identify with a callsign as part of my name. Also, I want to maintain my privacy. You will just have to believe my word that I am licensed. What would my callsign prove anyway?

>>>or whatever.

>Hams talk about some strange stuff that is hard to relate to. Invite a
>non-Ham
>to a Hamfest or Ham club meeting and ask this person if Hams seem like normal
>people.

Let's invite a non-NASCAR fan to Talledega and see if they think NASCAR fans are like normal people.

Let's invite some non-Hang Gliding people to Henson's Gap Launch and see if they think people who hang glide are like normal people.

Let's invite some non-medical or nursing people to spend a night in the ER and see if they think Nurses and Doctors are like normal people.

The point being, Anonymous One, that "normal" is defined by the circumstances of the moment and one's own personal choices.

For example, I don't think it's normal to go into a newsgroup on Amateur Radio topics, alledge myself to be a licensee and then refuse to give my callsign. Nor do I deem it "normal" to not sign my name or otherwise authenticate my posts an "mine".

In other words, I don't consider someone like "you" to be like "normal" people. People who make comments in public forums and then don't identify themselves or have the intestinal fortitude to put thier name on it are untrustworthy and probably hiding something. In your case, I doubt that you are a licensee in the Amateur Radio service. Certainly your scope of experience in matters relating to the Amateur Radio service are nil.

It proves you are licensed, as you alledge to be. So far, you have NOT demonstrated anything that would indicate that you have any practical experience in matters relating to Amateur Radio.

So far, my take is you are under 21, not a native, and have a pretty poor attitude towards acceptance of others. You are unlicensed, however you fancy yourself as "almost as good as licensed" because you have a close friend or relative who has included you in some Amateur Radio related activities.

So...prove me wrong.

>I do not need to give out my call sign. Like I said, I am not a "Ham" and do
>not identify with a callsign as part of my name.

Then why are you here and pretend to be one? Some would call a person who
says they are one thing when that is not accurate a "liar".

>Also, I want to maintain my privacy.

You want to maintain the illusion of being somebody special.

>You will just have to believe my word that I am licensed.

We can only take the word of a person we know. We DON'T know you, save
for a few anonymous posts here.

>What would my callsign prove anyway?

Above you claim you are not a Ham, then here you ask what good "(your)"
callsign would prove. This further leads me to believe you are not being
truthful. You can't keep your story straight.

And to answer your question, it would lend some credibility to your posts.
So far, you have not rendered anything that would leave us to believe you have
any valid practical experience in the Amateur Radio Service.

Northern California style:

"W6XXX"
(very short pause)
"Hey Johnny, you there?"
(another short pause)
(Repeat as needed)
"Negative contact. W6YYY clear"

As far as "tradition" goes, why do most communications on the New York PD radio channels use the word "Kay" after each transmission (as in "26 David to Central, Kay" ? They were doing it 40 years ago when I lived there and I would suspect that they are still doing it.

Is it related to Morse message practice (meaning "over") ?

One can ponder about how Ham Radio could best suited
- without really considering it a question of emotional or social
behavior. Boy would that be wrong. Ham Radio could live and die on very
strange human,
emotional, and social interactions. technical merit takes a back seat in
any story of acceptance.

Look at something like the only code life-cycle. It
was at least as much a social story as a technical one. The no-code
technical mix attracted a certain kind of early adopter, and that adopter
in turn defined the culture (with some culture-hacking by code advocates). The
culture, ultimately, could not adequately support the hobby.

Kim he's been singing the same tune for years on this news group.
Never mind the fact that many of the so called "CB Plussers" are in
fact graduate engineers who know more about electronics and or radio
communications then he has learned in a life time. In fact the
university I went to now has what is called the "Wireless Society".
Several of the members are new with their Tech licenses. Some of the
new members are the teaching faculty who hold Masters and PhD's in
Electrical Engineering, Computer Science etc. I would like like to see
him insult those people to their face the way he does everybody in
print on this news group.

Understood.

And you were only off by a year or so. From the beginning of 1953 to mid-1967
your description was accurate.
>
>As for my comment about losing most of my privlidges...well to me it was. I
>was CW only on HF after coming back from the war games and my 7010 rock >was
all I had.

A little Comet and a piece of plate glass...

It was quite surreal for me to have passed the test, had full privs for a
couple of weeks, then lost them. Luck of the draw.

Remember when 25 kHz calibrators were all the rage so folks would know where
the subbands ended?

Here's the big question for those times: What was the FCC thinking? First
(1951) they set up a new, more extensive incentive licensing system. Then (end
of 1952) they do a quick 180 and give away all op privs to all hams except
Novices and Techs.

10 years later (1963), they dedide things have gone horribly wrong in the ARS
and they have to change it all over yet again, so they create the 1968 changes.
Which are then slowly watered down.

What was so going so wrong in 1963 that FCC thought they had to make such
drastic changes? (You should see what FCC wanted to do in 1965 - even more
draconian than what was actually done).

>contribute to our beloved Amateur Radio service.
>
Nothing new about that. 50 years ago, US hams needed an Advanced or Extra to work HF phone - ANY HF phone - except for 160, 11 or 10 meters. Techs had 220 and up, only. Some folks said Novices weren't "real hams", too.

Then (late 1952) FCC junked part of the system they had just installed (1951) and gave away all privs to all hams except Novices and Techs.

>Back then, it seems that we all, regardless of license class, worked
>together to improve the Amateur Radio Service.

Right. Did all of the AM folks help the SSB folks get their rigs going?
>
>Back then, nobody got a special deal because they could beep faster or
>remember more electrical formulae than someone else.

Sure they did!

Novices had tiny subbands because they had only passed 5 wpm and a simple written. Techs had no HF at all because, although they'd passed General theory, they hadn't done 13 wpm.

And there were Advanceds who were still mad because of the Great Giveaway of December 1952.

> I got my Extra in 1964,
>well before disincentive licensing, and it was simply just another personal

>accomplishment, and did not "elevate" me above other hams. We all shared

>patiently working WN4KKN or WV2CNL -- nobody remarked that it was "nice" of
>them to do that -- it was just part of being a good ham.

Almost all of the hams I worked as a Novice were other Novices. I still have my logs from those days.

>The notion that you
>had earned a special band segment never occurred to anyone

It occurred to the hams who suggested it to the FCC in 1964. I can get you the RM number.

>-- we were just
>excitedly "playing in the ether", and there was no distinction on the air
>between Extra, Advanced, General, or Conditional --

But there WAS a distinction between those classes vs. Novices and Techs. I was told I was not a "real ham" because I was "just a Novice".

>elitist special callsign
>formats to celebrate the fine granulations of your test taking/memorization
>skills had not been invented.

BULL!

Novices had the red letter of "N" or "V" to tell the whole world they were beginners.

Really OTs had 1x2s. OTs had 1x3s. Newbies had 2x3s. And lots of variations in between.

You could figure out most hams' "vintage" from where their calls fell in the sequence. Everybody knew that W3YIK was a veteran and WA3IYC was newbie. And you could not just BUY an oldtimey call.

>We'll never return to 'back then', unfortunately.

That much I can agree with.

>>Never mind the fact that many of the so called "CB Plussers" are in
>>fact graduate engineers
>Who cares no body.

This person and many code Nazis will simply ignore any evidence that disproves
their assertions. There is no use trying to convince them.

To the ONLY coders, real time knowledge of an encoding scheme is the ONLY thing
thats important, not knowledge of the material.

One can ponder about how Ham Radio could best suited
- without really considering it a question of emotional or social
behavior. Boy would that be wrong. Ham Radio could live and die on very
strange human,
emotional, and social interactions. technical merit takes a back seat in
any story of acceptance.

Look at something like the only code life-cycle. It
was at least as much a social story as a technical one. The no-code
technical mix attracted a certain kind of early adopter, and that adopter
in turn defined the culture (with some culture-hacking by code advocates). The
culture, ultimately, could not adequately support the hobby.

Without Kim having ever said this, I've as much told Dave he was a
jerk. Without the F word, of course.

To be honest I don't read much of Kim's stuff. But I do read Bruce's.
He's better than a Far Side cartoon.

Why, what did Kim say?

I would guess that most people who have ever read Part 97 read the
ARRL version. That's because they don't know what to think when they
read the raw FCC version. Lucky for me the Catholics taught me to
read and think.

> operate phone.

JJ and Dan, Sometimes (and this isn't necessarily directed at either of you)
that is what the problem is. Someone who ends up "loving" CW and just can't
seem to live without it, and maybe even goes to the extent that they never
use phone again...yada yada yada, is the only person(s) who end up with any
kind of friendly attitude toward them. Yet, someone who ends up not liking
CW: well, that's because they're a jerk, or it's because they're too lazy,
or it's because they never gave it enough time...etc. I knew I didn't like
brussel sprouts the very first time I ever tasted one. Never have eaten
them since; won't ever eat them again.

You can't have it both ways and expect everyone to just "go along" with it.
It seems that if someone likes CW, they're OK. But, if someone doesn't like
CW, well they're a pariah on the amateur radio community. Yet, on the other
hand, I can't think of one person who doesn't care for CW that I've seen a
post from, that gets argumentative over the issue of CW itself. We argue
about the attitudes set against us (being dumbed down, being welfare blah
blah blah, being unworthy hams) but--at least me personally--appreciate that
there are people who like it and people who do not. And, whether those
folks who think CW is some kind of godly act realize it or not, most of us

who are on the opposite side of the fence really aren't at all affected by the "superiorness." We, at least I, see that attitude as a very desperate one.

It's merely an indication of whether he could actually read and
understand the exam questions and answers.

Unless you think he simply went in and randomly circles a, b, c, or d
and scored 100%.

I think he's lying about a) not studying, b) his score, c) the elapsed
time, and/or d) his wager with the CBPlussers. It's also possible he
paid off the examiners. In any case, he's listed as an Extra in the
FCC database.

I'm sure you've warmly welcomed him to your elitist club.

Yeah. I've heard it done that way also. I think it's perfectly fine. So
far, there's been two posts that think there's nothing wrong at all with
confirming that a contact was not reached. See, I thought the
longer-licensed Haynie knew what he was talking about. Pshaw.

BIG GRIN You all do realize that when one uses the phrase "the F word"
or something similar, it is as much as saying the whole word out loud right?
Sometimes the emphasis by using that word is just pure justice. That's
especially so where Dave H. is concerned.

You could be correct on one or more of these. Then again, you could be
totally wrong.

> I'm sure you've warmly welcomed him to your elitist club.

If you've bothered to read my posts about Bruce, you know that isn't the
case.
You're pretty quick to accuse but it is evident that you haven't paid
much attention.

If I quoted it, I'd be as guilty as she. Kim responded to Bruce's
crudeness by trying to "out crude" him.

```

I don't see you as getting anything straight. It isn't "fake" when I tell you that I believe you are crude and that you haven't any class. I really believe that.

> *You* may
> like to pretend to people about who you are.

What am I pretending to be that I'm not, Kim?

:
: Here's the big question for those times: What was the FCC thinking? First
: (1951) they set up a new, more extensive incentive licensing system. Then
(end
: of 1952) they do a quick 180 and give away all op privs to all hams except
: Novices and Techs.
:
: 10 years later (1963), they dedide things have gone horribly wrong in the
ARS
: and they have to change it all over yet again, so they create the 1968
changes.
: Which are then slowly watered down.
:
: What was so going so wrong in 1963 that FCC thought they had to make such
: drastic changes? (You should see what FCC wanted to do in 1965 - even
more
: draconian than what was actually done).
:

Perhaps we seemed to be having too much fun. The heyday of Amateur Radio is generally agreed to be the period from the introduction of the Novice license until the onset of (dis)incentive licensing. I consider the 1-year Novice license to be the greatest stroke of brilliance by the FCC, and 1968 incentive licensing to be it's greatest blunder, even though I had been an Amateur Extra for 4 years before.

Did I actually key in these last two entries?! (As my English teacher wretches.)

BTW, I came home last night, after work and picking up my lad from a birthday party, (At which my XYL and lass stayed.) to find that my Heil mic had been used as a drumstick. Without the benefit of modern forensics, the Smucker's strawberry preserves finger prints led me to just one suspect....the very lad in my presence. Well, without a balancing parent in the house, I chuckled it off. :'-(

Besides, I was the very lad who had come home from school so many years earlier and done a back flop onto the bed....right on top of the drying balsa framework of my father's Royal P-38 Lightning. (Which was to be his masterpiece.) When he came home, he just smiled and told me "aw, that's alright. We'll get this right as rain in a jiffy."

...and so my 22 mo. old sat on my bed last night with a damp washcloth and cleaned a mic I hope to pass onto him at a <much> later date. ;-)

Kim

The purpose of my story was simply to illustrate that like many
things people at first reject, they wind up liking. It was not
meant to indicate that anyone who rejects the use of cw is
anything less that one who embraces it. I just don't understand
anyone who automatically rejects the idea of cw until they have at
least given it a try (not aiming at you). I operated cw as a
Novice for several months until I upgraded, it just wasn't my cup
of tea. I still tune the cw bands occasionally and practice
copying just to keep my cw skill, but I haven't had a cw contact
in many years.

Thats basically my story. I passed Novice at 13 and 3 months later had my General. Was 14 by then. CW to me was a royal pain in the butt. Learned it wrong (memorization) BUT when I got on the air as a Novice I really started to enjoy it. The challenge and all that.

All of a sudden one day I was doing 15. It was almost a overnight thing. I passed the General the first sitting. Kept doing CW and enjoying picking up the speed. By the time I went to the Military in 64 I was solid at 35 and peaking at 40.

In otherwords...after a while it became fun. And still is.

Kim,

I don't and never have felt some sort of 'superior' because I am good at CW.
I consider myself lucky to have the skill and to this day enjoy it a lot.

I understand that not all feel that way. My major problem is with those
that dont care for CW then spent hours badmouthing it right here or on the
air. It is like a personal insult and I respond. That is where Im coming
from.

If you dont want to play CW...thats fine...dont. But why does that give you
(not you in particular) the right to badmouth it?

The only purpose I can see is to start a fight. And it certainly works.

> off manual morse coding mode in any equipment...in the military,
> in commercial life (in 7 different radio services).
>

Glad to hear that. However I have. Obviously our life experiences are
different. I can understand your lack of knowledge based on your lack of
experience with the mode. Why can't you see the other side?

> Morse code is slow and both ends of a circuit are prone to human
> error, compared to all other modes of communication. Even the

> fastest "CW" op can't beat a 100 WPM old-style RTTY. Voice has
> an equivalent word rate of 200 to 300 WPM, spoken clearly.
>

Speed is NOT ALWAYS the best criteria to determine communication
capabilities. It takes two things to communicate...An operator at both
ends. Even with a tty circuit you need operators. Feeding the paper,
oiling the gears, winding the tapes and putting them into loops as required.
Been there and done that.

TTY can be disrupted with a simple carrier signal. It totally blocks the
Baudot code and you get wall to wall jibberish. A good CW op can work
through most interference. And dont try and tell me that the 'modern
macines (computers)' can decode CW without even needing a human. Show me
the machine that matches a human ear and mind, and I'll conceed defeat.
But we both know it doesnt exist. And NEVER WILL.

CW is still the ONLY mode that can get through under the most adverse
conditions utilizing the most primitave of instruments. Ask the Hanoi
Hilton pilots how they communicated?

> >Especially
> >in emergency situations where it may indeed be the only way to get out.

I have no idea, nor to I care what the ARRL did or didn't do, or what plans were implemented. I only know that from here in Alabama I got into contact via CW with a HAM STATION in the effected area and passed a message trying to find out about a third parties family. They took the traffic and we received the reply via the National Traffic System that evening on the scheduled network.

Any further questions?

R75 Man -- I took my DX-398 and matching antenna on vacation last month to Northern California and picked up all the biggies on SW + lots more.

On the Ham bands - 10M SSB heard Greece, Italy, So Europe -- later Asia, Pacific including Easter Isle. Great Combo the DX-398 and its 23 foot external Antenna.

Happy Thanksgiving from San Diego

Maybe that is why they dumbed down the technical test, so folks
like wa8ulx could still obtain that Extra status.

>The only mistake made by the ARRL/FCC
>was not to allow full grandfathering of extant General-class licensees
>to the Extra class.

FCC was concerned about the knowledge and skills of existing hams, not just newcomers. Grandfathering would have set up an uneasy situation where the new folks had to meet much tougher requirements than those with existing licenses. And the desired effects would take a long time to percolate through the ARS because only newcomers would have to meet the new requirements.

FCC initially rejected all grandfathering suggestions. In fact, FCC wanted to demote Advanceds to General class because all existing Advanceds had taken their tests more than 10 years earlier. FCC wanted to replace the Advanced with a new "Amateur First Class" license that would require 16 wpm code (!), a new written, and 1 year experience as a General or Conditional. The initial FCC subband restrictions were even more draconian than what was eventually put into place. It was all the ARRL could do to shoot that down and get existing Advanceds grandfathered.

<seventythree@eightyeight.net> writes:

>I think for real hams, it depends on what they do with ham radio. For some,
>it is a service. For others it is a hobby. For still others, it's both.

Agreed.
>You can't convince me that a die-hard contester is doing anyone a service.

Even if you are not convinced, the fact remains that contesters and DXers do
indeed perform a service. Actually two services:

- They help develop operating skills, practices and concepts
- They push the technology used in amateur radio.

For example, the first widespread use of computers in hamshacks was by
contesters automating their logging. Many of the features now considered
standard in ham gear got their because the die-hard contesters wanted those
features. Same for the performance improvements in modern gear. It's not the
casual ragchewers who push the marketplace for FT-1000s. and Orions.

>You also can't convince me that a die-hard emergency communicator is in it
>for a hobby.

Nor anyone involved in public service comms. Example: The directors of the NYC
Marathon have long said they couldn't do the race without the hams who provide
the communications.

Yet there are those who pooh-pooh the idea that ham radio is anyhting except a
hobby. They are mistaken, of course.

>But, the important thing is that we are all hams.

No - we're all "real" hams.

:
: BULL!
:
: Novices had the red letter of "N" or "V" to tell the whole world they were
: beginners.
:
: Really OTs had 1x2s. OTs had 1x3s. Newbies had 2x3s. And lots of
variations in
: between.
:
: You could figure out most hams' "vintage" from where their calls fell in
the
: sequence. Everybody knew that W3YIK was a veteran and WA3IYC was newbie.
And
: you could not just BUY an oldtimey call.

Except for novices (who "upped or outed" in one year) you could NOT tell their license class, the callbook didn't contain the information, and frankly nobody CARED about your "rank". When I made Amateur Extra I had a 2x3 callsign (KG6AQI) and many Generals were on the air at the same time with 1x2 callsigns. W0TK just went SK holding a General class license. My friend W0VDI (original issue) went SK a couple of years ago with the same Technician class license he earned back in 1955. So much for being able to tell license class from a call sign.

>resorts to the Nazi analogy. Move over Lennie!

I stated my position. His indifference to the graduate Engineer that had a
no-code license shows that their technical knowledge is meaningless.

Since the graduate Engineer did not learn an audio motary skill called Morse
code, the graduate Engineer is equivalent to a CBplusser.

>>To the ONLY coders, real time knowledge of an encoding scheme is the ONLY
>>thing
>>thats important, not knowledge of the material.

He even says that some Extras cannot put up a dipole (this is HIS claim). So,
the graduate Engineer that can design circuits is no good for Amateur Radio,
since they did not learn Morse Code.

So, one can conclude that the only thing important to the only coders is the
knowledge of the code.

Looks like I stated my position.

Vshah...it is considered proper "netiquette" to cite the post that you are quoting. Once again, more evidence that you are not very well informed or skilled in technical matters of your own, yet you feel quite at liberty to call into question the skills of others. This is the epitome of rude.

>> Didn't take long, did it...Unable to effectively state his position, he
>>resorts to the Nazi analogy. Move over Lennie!
>
>I stated my position. His indifference to the graduate Engineer that had a
>no-code license shows that their technical knowledge is meaningless.

And you base the "meaningless" assertion on WHAT? Your own personal emotions? Because you certainly have NOT made them based upon an informed position.

>Since the graduate Engineer did not learn an audio motary skill called Morse
>code, the graduate Engineer is equivalent to a CBplusser.

"motary skill"...? WHAT language are you getting this from?

>So, one can conclude that the only thing important to the only coders is the
>knowledge of the code.
>
>Looks like I stated my position.

Hmmmmm....>>I<< have an Extra, and I dare say I can erect not only a dipole, but several other types of antennas with nothing more than a piece of paper and pencil to do a couple rough calculations. Been there...done that...

I am not, by the way, a "professional" engineer.

As for your "position", you have stated "jibberish". You are trying to impress us with your mastery of the vocabulary, however you run meaningless words together into disjointed and rambling sentences.

Try again. And include your callsign.

There are still several Generals and Advanced with 1x2 calls, although I imagine they are dwindling fast. There's a couple here in 4-land.

I just had the pleasure of caring for a fellow who was 98 years old, and he was an original sparker. Made his first rig from the remanents of an electrical fan and other car parts. His face would light up when he recalled his first "DX" of 30 miles!

Hmm, possibly. How about a challenge!

Mr. Vshah! Please explain VSWR without any references to anything other
than say a non-technically oriented 18 year old person can recognize and
understand. No acronyms, no language that only those "in the "cult""
would understand. Let's say in 100 words or less.

I probably couldn't without resorting to referring to non-standard
language. But let's give it a try!

You seem to like insulting people who have a demonstrated superior technical skills to your own. At least university degrees are earned by learning the material, not by memorizing the answers to the exam using the published answers and a yellow high-liter. Just because somebody has passed the Extra exam doesn't mean a thing. I've read about those 9 and 10 year olds passing the exam and I wouldn't trust one of them to wire up a simple light switch.

==========

>> >Let me try again....knowing CW makes you a better communicator.
>>
>> Only if that is the only mode available to use.
>>
>Of course. And your point is?

This isn't the 1930s when Kode was still King. Offensive though
the time statement may be to you, present day is 70 years
later and a lot of changes have happened in the entirety of radio.

On-off keying codings are a MINORITY mode in all of US amateur
radio. It is on the way OUT even in US amateur radio, and
certainly all but completely disappeared for communications by
radio in every other US radio service. [the only widespread on-off
keying mode in non-amateur radio is a preset digital sequence in
some keyless auto entry systems using a short-range RF link
from a key-fob size transmitter...no manual keying required or
allowed in that system]

>> In over 49 years of transmitting RF in communications, I've never
>> had ANY need to know, use, or even design-in any sort of on-
>> off manual morse coding mode in any equipment...in the military,
>> in commercial life (in 7 different radio services).
>
>Glad to hear that. However I have. Obviously our life experiences are
>different. I can understand your lack of knowledge based on your lack of
>experience with the mode. Why can't you see the other side?

I CAN see the "other side." I CAN see where on-off keyed morse
has NOT BEEN SEEN by just about every other radio service in
the world...including maritime radio distress and safety purposes.
In general, manual telegraphy is slow, is subject to errors at both
ends of a radio link even with the best of morsemanship skills
relative to nearly every other mode in use for communications.

I CANNOT see where the morse code test MUST be kept just to
satisfy some sensitive egos who champion that mode...at the
expense of countless others who may, but probably will not,
come into amateur radio because of that test requirement.

I CANNOT see the present-day welfare system that rewards a
few with aptitudes for morse just so they can have a nice
federally-guaranteed merit badge to wave at others to show how
good and superior they are in radio. [who made morsemen
some reincarnation of a Marconi?]

I CANNOT see maintenance of the last remaining Living Museum
of Old Radio Skills through the forever-maintenance of the code
test for an amateur radio license.

The FCC can't see it either.

>> Morse code is slow and both ends of a circuit are prone to human
>> error, compared to all other modes of communication. Even the

>> fastest "CW" op can't beat a 100 WPM old-style RTTY. Voice has
>> an equivalent word rate of 200 to 300 WPM, spoken clearly.
>
>Speed is NOT ALWAYS the best criteria to determine communication
>capabilities. It takes two things to communicate...An operator at both
>ends. Even with a tty circuit you need operators. Feeding the paper,
>oiling the gears, winding the tapes and putting them into loops as required.
>Been there and done that.

Go sit on the hospital floor, boy, been there, done that well before
you...but in northwest Asia, not southwest Asia. Teleprinter data
modes don't use "gears, tapes, or loops" today and didn't back in
the Gulf War [eleven years ago].

If manual telegraphy was so "error free," why were there so many
lawsuits in courts concerning landline telegraphy communications?
Landline manual telegraphy was largely interference-free and didn't
suffer fading or "having to work weak signals." Why did the rest of
the world convert to teleprinting telegraphy instead of keeping that
wonder of primitive communications called morse code?

>TTY can be disrupted with a simple carrier signal. It totally blocks the
>Baudot code and you get wall to wall jibberish.

The rest of the radio world left 5-level Baudot codings in teleprinting
behind back in the 1960s. On-off keying codings CAN be blocked
by simple BC signals...or haven't you heard of the complaints over
the 40m band and the unresolved (since 1979) broadcasters there?

>A good CW op can work through most interference.

A really good op can probably hear signals that aren't there...

>And dont try and tell me that the 'modern
>macines (computers)' can decode CW without even needing a human.

I wouldn't TRY to tell anyone such as yourself anything...my
comments here apply to other readers.

"Modern machines" such as data terminals DON'T NEED the
arrythmic Morse-Vail coding patters, they DON'T WANT THEM
since multiple-level data with or without Forward Error
Correction works so much better, faster, and with less error
than a manual morse radio circuit with two operator-"modems"
at each end.

About the last hold-out for manual morse modes (other than
amateur radio) is maritime radio...and those radios are largely
the third-world mariners. Modern maritime radio, by agreement
of the rest of the maritime world, gave up the old 500 KHz
distress-safety by morse signalling back a few years...in favor
of the GMDSS. Modern mariners in shipping use DATA modes
for messaging...faster, better all around for them. Private

mariners use voice on VHF (close in to shore) and SSB on HF
(open ocean). SGC has a very large market of their SGC-2020
to the maritime market.

>Show me
>the machine that matches a human ear and mind, and I'll conceed defeat.
>But we both know it doesnt exist. And NEVER WILL.

You are not a Luddite. You are a Deux Ex Machina Luddite.

"Modern" machines for communications were already SUPERIOR
to manual morse methods in the 1960s. "Modern" machines for
communications were BETTER in the 1930s when commercial and
military HF communications adopted SSB big-time.

>CW is still the ONLY mode that can get through under the most adverse
>conditions utilizing the most primitave of instruments. Ask the Hanoi
>Hilton pilots how they communicated?

According to their biographical statements, it was a "tap code,"
not morse or even Morse-Vail.

When were you a prisoner of war in North Vietnam?

Or were you just brainwashed without being taken prisoner?

Did your mother drop you at birth, or did your dad throw you onto the
hospital floor first?

==========

>If you dont want to play CW...thats fine...dont. But why does that give you
>(not you in particular) the right to badmouth it?

Quite true, BB, but what is it about CW that makes you think
you can make nasties at others because you have that skill?

For me, it's only been about half a century of experience with
Macho Morsemen proclaiming their innate "superiority" in all
of radio through morsemanship.

Granted, some of those morsemen did indeed have enough
experience and knowledge about other radio things, but those
were in the minority among the Macho Morsemen. See all
those who think that "real hams" are only those who love,
cherish and adore morse code and demand the code test be
maintained forever more.

>The only purpose I can see is to start a fight. And it certainly works.

If your feelings are so easily bruised by a few years of non-love
of morse code commentary, then I'd suggest you go bye-bye
from here. Having been IN radio communications on HF since

1953 not ever using or having to use any morse code, I've accumulated very nearly a half century of nothing but deprecating bullshit from the Macho Morsemen Melange and their beeping "superiority" through morseability.

Do you wish some kind of welfare state to support your personal desires at the expense of others? Or are you going to come up with some more "hospital" remarks?

That's cool, and I agree with you. I don't bad mouth CW, that would be pretty stupid. Well, wait, I do not believe as wholeheartedly in CW as the cure-all that someone like Larry, or Dick Carroll, think it is. I don't laud CW to the exclusion of other, just as easy and just as reliable modes. But, I also don't think I'm "badmouthing" CW when I say that.

At any rate, the bad karma for the whole scenario is that someone like you--who's willing, it seems, to be human about the CW issue runs into someone like me--who's willing to understand the tradition and love for CW; and we've both been muddied by the ugly debate so the first thing we do is jump all over each other because of the nasty history this debate has become. I'm speaking parenthetically, of course, because I don't really think you and I have had nasty words over the CW issue. I'm just "talking out loud" about how the whole debate gets really blown out of proportion because of the extremes like, for example Larry Roll and Len Anderson.

Those of us pretty much in the middle end up with attitudes also. It's a pity. Especially over something like CW.

Dan, there's things that I do every single day at work and I still look up stuff that is easy enough looked up rather than using that memory cache. I'd pretty much be willing to bet that surgeons review surgical procedures and even anatomy, too, even thought it's a part of their job. I think frequency allocation is one of those things that can be "ignored" in terms of memorization. As my license class advances, if it ever did, I'd just look up where and what I can do.

I *know* 2M is from 144-148MHZ because I used it every single day when I was on the air. And, I know my 10M portion, 28.3-28.5, because that's easy enough remembered. However, get me to 70cm and anything else and I've got to look it up. I don't use it, don't even think about it, so don't try to retain anything about allocation. I'll look it up.

Your mileage may vary. ;)

Okay, sorry to hijack this thread, but I'll rename it so that those who don't care can skip it over.

JJ- I'm not disputing the object of your slam here, but this whole thing about dumbing down tests is really starting to get annoying.

I'd like to know what the Tech test was like before it was "dumbed-down". I don't know "dumbed-down" from the purportedly "smart" test that was given before the one I took. What is the story here? Does anyone know where I can find the test question pool that was extant before I took the test this year (assuming one can be accessed online)? I'd love to know what kinds of stuff prospective Techs were tested on before the "dumbing-down" of the most recent test.

I didn't think the Tech test was at all hard. I studied the enter ARRL entry-level study book for one week, back to front, before I took the exam. Sure, I thought the test was easy. But before this, I didn't know ONE THING about radio, propagation, electronics or anything having to do with the amateur radio service before I studied. I checked through a copy of the General manual this weekend and I don't think I'll have any problems learning this material, either.

My point is that, even if the entry level test WAS dumbed-down, I actually *learned* something from studying the material for it, dammit! I am not a stupid person; I consider each and every new learning experience I'm exposed to to be valuable.

I want to learn this stuff, especially the electronics part of it, and I'd sure like to talk with other hams on the air about it. Unfortunately, my first on the air contacts have not met with much fruition, as few people want to talk with "newbies". I know there are some people out there who would like to mentor newbies and get others into the technical aspects of the hobby (even if they *did* cruise in on a dumbed-down license), so I will bide my time until I find someone to talk with who won't judge others by the test they took to enter the hobby.

Christ almighty, this "dumbed down tests" talk is making me ill, no matter which side of the fence it's coming from.

>Perhaps we seemed to be having too much fun.

That might just be it. After all, it was only a few years earlier that FCC created 27 MHz cb, which is the true winner of the DAIOTC (Dumb Assed Idea of The Century) award. Beats incentive licensing by a country mile.

>The heyday of Amateur Radio is
>generally agreed to be the period from the introduction of the Novice
>license until the onset of (dis)incentive licensing.

1951 to 1968 - 17 years. But for the first two years of that time, US hams needed an Advanced or Extra for full 'phone privs.

The period when Generals and above had all op privs was only 15 years and 10 months - February 1953 to November 1968. Pretty short time, compared to the 90 year history of US hams being licensed.

Perhaps we should return to the principles of that time:

- Easy-to-get starter license with minimal privs
- Lots of other license classes but almost no real distinction between them
- Few vanity calls, and none in bad taste
- All hams code tested. All who have HF phone privs tested at at least 13 wpm
- "Secret" written tests
- Lots of homebrewing

- High standards of on-air behavior
- Little or no competition from other radio services

>I consider the 1-year
>Novice license to be the greatest stroke of brilliance by the FCC, and 1968
>incentive licensing to be it's greatest blunder, even though I had been an
>Amateur Extra for 4 years before.

Didja learn all the code and theory for the Extra on your own in your early teen years, Hans?

--

I think both were smart moves in principle, but both were flawed by poor implementation. The way IL was implemented was terrible, and guaranteed to cause bad feelings.

The Novice was a great idea because it let new hams get started with minimal testing, and at the same time its privileges focused new hams towards a few well-trodden paths. The original Novice did not include 40 or 15 meter privileges!
The 75 watt xtal control limitation meant a level playing field and emphasis on simple low power rigs. My first transmitter was a homebrew 10 watt 6V6GT on 3726 kc.

But the Novice could have been a lot better:
- the subbands were too narrow
- the subbands were not harmonically related
- having 2 meter 'phone (145-147) caused many to waste time on 'phone to the detriment of developing their code speed for upgrade to General.
- the "one-shot" nature of the license meant that if a newbie couldn't get their act together in a year, they were out of luck and had to either go off the air or upgrade. Didn't matter if a new ham got sick, drafted, or ran into other circumstances like financial trouble, forced move, etc, when the year was up it was all over. Many new hams simply dropped out after a year because they couldn't make the jump to General or even Technician before the Novice ran out.

Two years, retakeable was a better idea. Five/ten years renewable was a mistake.

--

The real problem with IL was that it took privs away from folks who felt they "owned" them. Would have been much smarter to offer different incentives that would have meant more, not just getting back what had been lost. Examples: More power, vanity calls, widened phone bands. Plenty of hams would have gotten Extras in order to run a couple of kW, have their choice of callsign, and/or operate 'phone below the old limit of 3800.

One thing I remember clear as glass from my early ham days was how much complaining, whining and moaning some hams of that "heyday" did over the idea that maybe they'd have to learn some radio theory or pass a somewhat faster code test. Guess some things never change.

:
: See any mention of license class?
:

You wrote in direct response to my statement that "elitist special callsign formats to celebrate the fine granulations of your test taking/memorization skills had not been invented", a statement which is clearly license-class-centric. Then in the style of Len Anderson, you try to sidetrack that into something about "vintage". Shame on you!

I'll stick to my statement -- "elitist special callsign formats to celebrate the fine granulations of your test taking/memorization skills had not been invented." I sorta like my 1x2 callsign, but for the life of me can't understand why a Tech or General (or old Novice for that matter) is less deserving of the same.

(Now we'll hear about "effort" and "dedication" and "paying your dues" a lot of high sounding babble like that!)

You make it sound like the ARRL did us a favor. The reality is they PUSHED incentive licensing. A direct result of the Good old BOys in Headquarters wanting more room to play.

Pretty much. I was 20 years old when I got my first radio license (a
Conditional), but I was around radio throughout my childhood (my Mom was a
ham, licensed from 1932 until her passing), and a lot of my school science
projects, etc., revolved around receivers, Tesla coils, and similar
electronic mischief.

You read the above and you are still asking this? An only coder passed the code test, but did not understand the writtten test material (easy to do if question pool format).

The only coder only wants to code and could care less about the material.

This is not a productive question to ask. You'll get alot of arguing, rather
than answers.

>I want to learn this stuff, especially the electronics part of it, and I'd
>sure like to talk with other hams on the air about it. Unfortunately, my
>first on the air contacts have not met with much fruition, as few people
>want to talk with "newbies". I know there are some people out there who

>the hobby (even if they *did* cruise in on a dumbed-down license), so I will
>bide my time until I find someone to talk with who won't judge others by the
>test they took to enter the hobby.

The code Nazis believes code is the most important thing. They will try to put
sown those that don't try to learn the code. With the emphasis on code only,
the technical people are discouraged, and the dumbing down of amateur radio
occurs. It is clear wa8ulx and his type want code to be the only aspect.

You can get a code free technician license. However, if you want to get
involved in the technical part of Amateur Radio, I don't feel you will find it
through Ham Radio. Its just not part of the culture.

I have been to several clubs, Hamfests, conventions. I have tried to raise this
point. But, Hams do not seem to want that. Most seem to be there for appliance
operation, contesting, ragchewing, dx, etc. The only thing that comes close is
that Hams seem to get very involved with antennas and become quite good.
However, this is just so they can better outfit their radios.

Also, I found many Hams want to use strange codewords, many that begin with Q.
I guess part of the draw of Ham Radio is that they can be part of these
traditions. Most Hams are male, few are technical. Calling CQ and getting on
the air is what interests them.

You may understand technically what a Ham is saying, but you may not be able to
relate to it unless you are a true Ham. Ham seem to have some kind of
commonality. Common traditions, goals, politics, interests. You find that
either you are a "Ham" or you are not (whether or not you learn code).

The other potential activities such as homebrewing, kit building, radio
direction finding, troubleshooting, test equipment operation, etc are not
emphasized in the Ham Radio clubs.

I found it frustrating trying to find Hams that are interested in the technical
aspects. Hope you have better luck.

> KC0ODY

Actually I've looked over the current test pool question and do not find them to be dumbed down from when I took my tests in 1992.

The main difference is that now there is a single written for Tech whereas before one had to take the Tech and Novice written. The current Tech material includes both levels of information. It's just that now you don't have to answer quite so many questions but you still need to know all the material. Before the restructuring there was quite a bit of redundancy between the Novice and Tech writtens anyway.

The General stayed pretty much the same.

The Extra now encompasses the material that was formerly split between the Advanced and Extra pools. One has to know all the material even though the number of questions on the current Extra is less than the sum of the old Advanced and Extra test (the number of questions is however greater than the old Extra test alone).

Under the old 5 level system, the absolute hardest test was for the Advanced license. Between the time of the restructuring to 3 classes and the introduction of the new Extra question pool, some people did get a little easier written test path to Extra since they only had to take the previous Extra written and did not have to take the old Advanced written. However the new question pool for Extra was introduced this summer and that has been corrected.

Now there has been some shift in focus of the written tests due to changing technology, regulations, restructuring, etc but they are no easier than before. Granted a person does not have to take as many tests to go Tech, General, Extra, they still have to learn just as much material to be sure to cover the pool of questions from which the exams are created.

Jackie, no offense intended, I should have put dumbed down in
quotes to indicate I was using the words of some others here. The
test are in many was easier now than they used to be, but there
are those who were licensed in the past that seem to think they
were tested when passing the test really meant something. They
should go back a few more years when the questions were essay type
and one had to draw schematics of circuits and explain in detail
how they worked. Most of those who seem to think they took the
'real exams' actually themselves took 'dumbed down' test and
couldn't pass the earlier ones if their lives depended upon it.

Yea right.

> And you what was your excusse for not upgrading sooner?

What do you mean 'upgrading sooner"? I have held and Advanced
ticket for some 35 years. Are you asking why I have not upgraded
to Extra? The Extra buys me nothing in respect to my operation on
the ham bands, and I don't need it for feel good bragging rights
as you and others do.

The land-mobile community has its own version of "roger beeps" in
the digital transmitter ID (which we call "turkey calls" or
something more obscene) when the mobile/portable unkeys.

Sorry, OM, but I'd score a passing grade because...

...I know the difference between "there", "their", and "they're"...

...I know the difference between "to", "two", and "too"...

...I know the difference between "forth" and "fourth"...

I seriously doubt that the same thing could be said about you.

>The code Nazis...(SNIP)

There you go again. Nothing productive or constructive to say, so blame it on "Nazis".

>You can get a code free technician license. However, if you want to get
>involved in the technical part of Amateur Radio, I don't feel you will find
>it
>through Ham Radio. Its just not part of the culture.

I have a 20WPM Extra, and >>I<< am involved in the "technical part" of Amateur Radio. I was involed in the "technical part" of Amateur Radio as a 5WPM Novice.

And as for your "not part of the culture" comment, I refer you to almost ANY issue of QST (which YOU would force out of printing), and EVERY copy of "QEX" for more "technical parts".

As anyone with a six-grade education can see, it IS in "the culture".

YOU are just not a part of it, "vshah", otherwise you wouldn't be making such glaring mistakes.

>I have been to several clubs, Hamfests, conventions. I have tried to raise
>this
>point. But, Hams do not seem to want that. Most seem to be there for
>appliance
>operation, contesting, ragchewing, dx, etc. The only thing that comes close
>is
>that Hams seem to get very involved with antennas and become quite good.
>However, this is just so they can better outfit their radios.

As has been suggested to you on more than one occassion, if the club you are going to does not have the "projects" that YOU like, start a club of your own...Advertise in QST, CQ and Popular Communications and I bet you come up with some persons who are of like mind.

>Also, I found many Hams want to use strange codewords, many that begin with
>Q.
>I guess part of the draw of Ham Radio is that they can be part of these
>traditions.

SO WHAT...?!?! EVERY sport, past time, hobby, etc has it's own "lingo"...

I have directly asked you before and you resist answering...WHY is Amateur Radio any different than NASCAR, hang gliding, snowboarding, football, etc...?!?!

>Most Hams are male...(SNIP)

Are you looking for love in all the wrong places? You keep addressing the "mostly male" aspect of Amateur Radio. Again, SO WHAT? Most floral arrangers and nurses are FEmale...So what do you want them to do? Club the opposite gender over the head and drag them in?

>...(UNSNIP)...few are technical.

Please cite the scientific poll you gleaned this from.

>The other potential activities such as homebrewing, kit building, radio
>direction finding, troubleshooting, test equipment operation, etc are not
>emphasized in the Ham Radio clubs.

BULL ! ! ! ! ! !

>I found it frustrating trying to find Hams that are interested in the
>technical
>aspects.

Perhaps if you were one yourself you'd have better luck, "V"

From a Vshah post in another thread...

>Also, I found many Hams want to use strange codewords, many that begin with
>Q.
>I guess part of the draw of Ham Radio is that they can be part of these
>traditions.

SO WHAT...?!?! EVERY sport, past time, hobby, etc has it's own "lingo"
and traditions.

I have directly asked you before and you resist answering...WHY is Amateur
Radio any different than NASCAR, hang gliding, snowboarding, football,
etc...?!?!

Would you tell a NASCAR fan that "So what...Dale's dead now forget
it"..?!? Try it and see what happens!

Know what a "wuffo", "sled ride" or a "rotor" is? A hang glider pilot
does, and they are terms that uniquely suited to that sport.

How would you score a football game without "quarters" or "downs"?

Are we getting the picture, "V"?

>Most Hams are male...(SNIP)

Are you looking for love in all the wrong places?

You keep addressing the "mostly male" aspect of Amateur Radio. Again, SO
WHAT? Most floral arrangers and nurses are FEmale...So what do you want them
to do? Club the opposite gender over the head and drag them in? If someone is
NOT interested in something, they are NOT interested!

And lastly, WHAT is your callsign?

>I'd like to know what the Tech test was like before it was "dumbed-down". I
>don't know "dumbed-down" from the purportedly "smart" test that was given
>before the one I took.

Hi Jackie...welcome to the zoo!

The tests themselves have not been "dumbed down", however the way we
prepare for and administer them has.

In my not so humble opinion, opening the question pools to verbatim quotes
was a foolish thing to do.

Some "old timers" quote old texts which allegedly gave "near verbatim"
references, however they are not very accurate. I came up through the
"Incentive Licensing" program, and never once did any of the texts I used
provide such.

Also, "dumbing down" is used by some to refer to the decreased code
requirement since 15 April 2000. I prefered the 13 and 20 WPM tests myself,
however I also started at only 5WPM (as a Novice, WN8OAH) and managed to do OK!

Those that persevere in code will do so from 5WPM as well as from
13...Perhaps better.

If anything has "dumbed down" Amateur Radio, it was the opening of the
question pools that allows rote memorization of the questions.

>My point is that, even if the entry level test WAS dumbed-down, I actually
>*learned* something from studying the material for it, dammit! I am not a
>stupid person; I consider each and every new learning experience I'm exposed
>to to be valuable.

As it should be. However practical experience has shown that there is a
larger preponderance of "new hams" who just gleaned enough from the "Q & A"
manual to squeeze through. The are now solidly entrenched on one or two
repeater pairs, occassionally a simplex channel or two.

This is not to say a lot of folks haven't done (and been rewarded for the
experience) the same as you, and Amateur Radio as a whole is a richer place for
them.

>I want to learn this stuff, especially the electronics part of it, and I'd
>sure like to talk with other hams on the air about it. Unfortunately, my

>first on the air contacts have not met with much fruition, as few people
>want to talk with "newbies". I know there are some people out there who

> Are people just getting licenses, upgrading, etc and then not
> operating at all?

Trickery in the numbers.... I can make those numbers "say" one thing, as you can have them "say" another.... Accountants do that on a daily basis.... Overall, there are not enough new hams coming into the ranks that will be needed to replace/fill-in the spots that will invariable happen due to death of the larger percentage of current hams, that being the 45-75 age group. Within 10-20 years, we will lose a good chunk of that age group either to accidental or typical health related issues.

Whether or not someone wants to argue the incentive licensing issue, or not, the whole thing won't do a darned bit of good, unless there is the public's knowledge about ham radio.

Larry,

I agree with this post for the most part.... Our national organizations (ARRL and others) are responsible, as well as the more "local" organizations too. There are some clubs that are doing an awesome job at this, but there are many others that are not pulling their own weight in this regard. The way I see things going recently is that each one of us can try to "sell" ham radio to our friends and family, but after we have gotten all of the people that are our friends/family licensed, we all seem to stop. (Gee, almost sounds a little like Amway.... sell to family and friends first?) Maybe Amway does have a good idere there, as in the recruitment? :)

After all Jim, how the hell is a person gonna learn that they are screwing up in the first place, and how to correct it? I am by far not the best op out there, but willing to learn whatever it takes to get a little closer every day!

For example, one of the changes I made in operation after someone politely mentioned it to me is the phrase "For ID." I had started to use that after listening in long before actual transmission, and thought at first that was how it was done. And this method was coming from "old timers" not newbies too. I DO NOT use that anymore though......

The way I do it on FM?

W*ABC from KC8PMX
pause for response

W*ABC from KC8PMX
pause again for response

KC8PMX

Obviously different modes have different methods of how a call would go, but two brief calls like I listed above seem adequate and allow for a reasonable time for the person to respond. The final "signing" by me I view as to let others know I am done, and whether or not someone uses the word "clear" after a callsign it actually a petty argument IMHO. It takes less than a second to say the word clear. Public safety related organizations use that word all the time.....

> every day communication, though, is no big deal--in my opinion.
>

Typically it was a rules related violations.... It is all about how you handle it I guess. At first, I definitely would be diplomatic about it. Kinda like the addage... the more ya yell, the less I am gonna listen! From time to time, I make errors, due to that fact that there are two different radio systems I operate on as well as amatuer radio... and sometimes they get mixed up from time to time. For example, the phonetics. I am guilty as hell of mixing up the APCO versus ITU phonetics.... in fact our Central Dispatch was severly caught off guard when I used ITU phonetics one time. (Adam, Boy, Charlie vs. Alpha Bravo Charlie and so on...) I have caught myself wanting to say 10-3 (basically a direct "yes" to a question) in response to a query that someone has posed to me, and damned near bit my tongue when saying so.... and quickly changed it to "affirmative."

> If you're talking about any other than rules stuff, I'd say you enjoy being
> the frequency police. Just an observation.
>
> Kim W5TIT
>
>

Not at all Kim..... if it is in a manner to "help" another, I will share that with the offender.... I do not "stalk" the frequencies as it is how you are saying in that sentence. Again... it is all in the matter of how you take on the offender, and how well they recieve it. Two of the five times I have ever attempted to "correct" another ham was:

1. A simplex operator was close to an input frequency to a repeater, enough to keep triggering the repeater, and politely informed him of what was happening. He stated he wasn't aware that was happening and said thank you and adjusted frequency.

2. A different guy though you were supposed to ID at the end of a transmission. Rules state every ten minutes and at the end of conversation. And again politely informed him that he didn't need to ID right before every single time he unkeyed. He also was cool about it.

Again.... even though I do not like the term "policing" in the phrase "self-policing" but that is what we are supposed to be. And if we all learn to politely deliver those messages of erroneous operation, and all learn to take that as "constructive criticism" I guess ham radio would be a better place. We need to look at ourselves before we start bitchin' about others such as freebanders etc......

Within the county mandated communications order for communications operation where I live, the formats would be either:

[UNIT #] to Central Dispatch

OR

Central Dispatch from [UNIT #]

The other phrase that is used more than "Copy" or any other mode of affirmation or acknowledgement used is "Message Recieved." At least in the fire service at least.

I have heard some other departments (not in our county) use the term "QSL" which also obviously has amateur radio ties as well as the "K" does.

Nor will you ever, other than how you operate/act as a person. There is always gonna be a**holes in every aspect of life. My attitude is to work with the ones willing to work with me in life, and to hell with the ones trying to work against me. My time is too valuable to deal with the ones that are working against me, and much better served with people that are working with me.

Do what you enjoy, associate with the ones that are willing to help you suceed in life (any aspect) and to hell with the ones that are against ya! :)

>I'd like to know what the Tech test was like before it was "dumbed-down". I >don't know "dumbed-down" from the purportedly "smart" test that was given >before the one I took. What is the story here? Does anyone know where I can >find the test question pool that was extant before I took the test this year >(assuming one can be accessed online)? I'd love to know what kinds of stuff >prospective Techs were tested on before the "dumbing-down" of the most >recent test.

Jackie,

I don't know if the old tests are still online anywhere, but the old study guides and question pools still exist.

The term "dumbed-down" means different things to different folks. For some, it refers to the material itself, to others the test methods, to others the reduction in code testing. Etc. I don;t use the term because it's so vague, and derogatory.

Here's a quick history of the Tech license.

The Technician license was created as part of the restructuring of 1951 (!). It was meant to be a license for those who wanted to experiment with the then-new VHF-UHF-microwave technology. Hence the name. Technicians back then needed to pass 5 wpm code, sending and receiving, and the same written test as Generals and Conditionals. This written test consisted of about 50 questions on theory, regulations, operating practice, etc. Most were multiple choice but some required the drawing of schematic and block diagrams. Also some fairly complex math calculations. Technicians had all ham privileges above 220 MHz back then, but nothing below 220. In those days there was practically no manufactured ham radio equipment for those frequencies, so using them meant building a rig or converting WW2 surplus.

Biggest difference was that there were no question and answer pools - the tests were secret. Unless you lived more than 125 miles from an FCC exam point, you had to go to an FCC office and take the exam in front of an FCC official. (Most big and medium cities held exams at least four times a year). FCC published study guides that indicated the general area of the tests, but not the exact Q&A. These FCC guides were in essay format even though most questions were multiple choice.

A person wanting a license had to pass all the exam parts at one sitting, and if anyhting was failed, had to wait at least 30 days to retest. No credit was given for the parts that had been previously passed unless they resulted in a license. Code had to be passed before you got a try at the written.

Here's a typical question:

"A low-drift crystal for the 3500-4000 kc. amateur band is guaranteed by the manufacturer to be calibrated to within .04% of its specified frequency. Desiring to operate as close to the lower band limit of 3500 kc. as possible, for what whole-number kilocycle frequency should you order your crystal, allowing 1 kc. additional for variations from temperature and circuit constants?"

The guide included how to calculate the answer, but not a long technical explanation. There might be several questions on the general topic of crystals and tolerances, or one, or none at all. No practice tests were available, either.

About 2/3 of the questions were on technical subjects, with the rest on rules and regs.

In 1954 the test procedure for Technician was changed to by-mail using a volunteer examiner, regardless of where you lived.. FCC did this to ease their workload at the testing centers.

By the mid 1960s, the test was all multiple choice, but still secret. Technicians got 6 and then 2 meter access in those years.

In the 1970s the writtens were changed so that getting a General or Technician required also passing the Novice class written exam. This meant taking two written tests.

In 1983 the FCC created the VEC system and stopped giving the tests themselves. FCC also decided that the actual questions and answers would be in the public domain, and stopped publishing study guides. Prospective hams could see all of the Q&A that were used on the actual tests, rather than just the subject areas. The 30 day waiting period was abolished. Again, FCC did this to reduce their workload, because VEs do for free what FCC examiners got paid to do.

Throughout the period from the 1960s to the 1980s, the tests got slightly larger, but less technical and more rules-and-regs oriented.

In 1987, the written test for General and Technician was split into two parts. Getting a Tech required the Tech part, plus the Novice test, getting a General required the General, Tech and Novice tests..

In 1991 the code test for Technician was dropped. In 2000 the old Novice and Tech writtens were combined into a single 35 question test.

Main point of this long rant is that it's been a long drwan out series of gradual changes, not one big change.
>
>I didn't think the Tech test was at all hard. I studied the enter ARRL
>entry-level study book for one week, back to front, before I took the exam.

>bide my time until I find someone to talk with who won't judge others by the
>test they took to enter the hobby.

As you can probably tell by now, I'll talk about ham radio at great length to anyone who is willing to listen/read and discuss in a civil manner.
>
>Christ almighty, this "dumbed down tests" talk is making me ill, no matter
>which side of the fence it's coming from.

Don't let it get ya. The test is the starting point, not the finish line. The changes were wrought by the FCC, not hams. The whole thing is like somebody getting mad because they paid $500 for a VCR 20 years ago, and today a VCR costs $100.

How hard were the old tests? In the '60s, back when the tests were allegedly so tough, there were lots of teenage Techs and Generals and Advanceds. Even some Extras. Heck, if I could pass them at age 14 those old tests could not have been that hard.

What matters is what we do with the license once it's earned.

73 de Jim, N2EY

If you want an even more longwinded discussion of US ham licensing since the end of WW2, I can post some links..

<w4nti@NOSPAMmindspring.com> writes:

>You make it sound like the ARRL did us a favor.

Would you rather they went along with the FCC plan?

>The reality is they PUSHED
>incentive licensing.

Nope. FCC pushed it. ARRL folks realized that FCC wanted it so bad that total resistance was useless. Plus slightly more than half of the membership and ham community in general wanted it.

Today we have a similar situation wrt code tests. FCC wants them to go away, and ARRL realizes that total resistance is useless. Membership wants to keep them but FCC doesn't.

>A direct result of the Good old BOys in Headquarters
>wanting more room to play.

Not from what I saw.

Besides, were the old tests really that hard?

> recent test.

OK. Prior to the Technician exam there was the Novice as the entry to
Amateur Radio. It consisted of a simple written exam with some rules,
safety, operating priveleges, Ohm's Law, and a few circuits. And a
5wpm Morse Code exam.

It was simple enough that many youth passed into amateur radio via the
Novice.

The next exam up from Novice was the General, which included the
written and the 13wpm Morse Code exam. If you failed the code exam,
you became a "Technician," not a General.

In 1987, the General written was split apart to make a separate
Technician written exam, and a separate General written exam. To make
General, you had to pass the Technician written, the General written,
and 13wpm. But at that date, all Technicians and Generals still came
through the Novice exams, including the 5wpm code exam.

In 1991, that all changed. Now the Technician could bypass the code
exam and just take the Novice and the Technician writtens. It was
generally referred to as the "No Code" license.

About 1994, there was too much confusion between the Technician that had Novice code, and the Technician that had no code, so the FCC began calling the coded Technicians "TechPlus."

In 2001, the FCC did away with the Novice exams, and the VEC's folded the Novice material into the Technician written.

If you take today's General written exam, you'll be the equivalent of the "old" Technicians, sans code.

You passed the requirement. That's all thats necessary.

> However, this is just so they can better outfit their radios.

Exactly, ham radio is about radio communications, always has been and
the quest for more effective communications never ends. The radio
manufacturers are today supplying affordable equipment which
represents the leading edge vs. the unaffordable often crappy gear we
had to deal with a half century ago when many of us rolled our own. I
built a half dozen or so rcvrs back when, I wouldn't waste my time on
any such thing today for real comms. So there is little or no interest
in designing & building radios these days and for the most part we're
now appliance operators. As you point out the last bastion of
homebrewing is antennas and you bet we're into antennas. Which makes
my point. We do what we have to do in order to COMMUNICATE.

>
> Also, I found many Hams want to use strange codewords, many that begin with Q.

You guessed wrong, you obviously don't know what makes ham radio tick.

> Most Hams are male, few are technical. Calling CQ and getting on
> the air is what interests them.

Yup. Get comfortable with it or look somewhere else for a hobby 'cause
ham radio is not gonna change to suit your fancy.

>
> You may understand technically what a Ham is saying, but you may not be able to
> relate to it unless you are a true Ham. Ham seem to have some kind of
> commonality. Common traditions, goals, politics, interests.

Yup again. And every other hobby has similar characteristics. You're
either inside the hobby or on the outside looking in or could care
less one way or another, your options.

> You find that
> either you are a "Ham" or you are not (whether or not you learn code).

This bullshit was worn out in this NG years ago, you're very late into
the game.

> The other potential activities such as homebrewing, kit building, radio
> direction finding, troubleshooting, test equipment operation, etc are not
> emphasized in the Ham Radio clubs.

That's right, there is a strong social aspect to ham radio you
apparently have trouble dealing with. If all that interests you is
electronics geekery you're wasting your time here and at ham radio
functions, join yer local chapter of the IEEE.

>
> I found it frustrating trying to find Hams that are interested in the > technical
> aspects. Hope you have better luck.

Have you ever actually built a piece of equipment and put it on the
air? Have you ever even seen a copy of QEX? Have you ever logged into
dot homebrewing?

OUCH!!!
>
> I'll stick to my statement -- "elitist special callsign formats to celebrate
> the fine granulations of your test taking/memorization skills had not been
> invented."

And I'll stick to mine:

"Really OTs had 1x2s. OTs had 1x3s. Newbies had 2x3s. And lots of
variations in
between."

It's a "class" distinction however you cut it. Forcing the newbies to
take 2x3s while the OTs keep 1x3 or 1x2 calls simply puts the reward
on time in grade rather than license test. Heck, in that "heyday", FCC
would try to give a ham who moved a similar callsign in the new
district.

> I sorta like my 1x2 callsign,

I don't see you giving it up so a non-Extra can have it. Would you
trade it in for one like KJ0YQY? Lotta fun in the CW SS, a 2x3 call
like that.

> but for the life of me can't
> understand why a Tech or General (or old Novice for that matter) is less
> deserving of the same.

They're not less deserving. See below.

> (Now we'll hear about "effort" and "dedication" and "paying your dues" a lot
> of high sounding babble like that!)

Not from me!

The short-callsign problem is really simple: Limited supply. For example, add up all the possible 1x2 callsigns starting with W, K or N. Total: 20,280. Add in the possible 2x1s and the total doesn't reach 50,000. There are now over 100,000 Extras and 684,000 US hams, plus clubs and other group stations. How do we decide who gets the short callsigns? License class? Time in the ARS? Auction?

>True... Republicans are doing it more and more.... Especially now. They now
>want to invade more and more of our privacy from day to day, with the excuse
>of 9/11 as their justification.

Where is the balance, though?

American's are screaming out for blood over this thing, both our own (for "letting" it happen") and from those who perpetrated the act.

The fact of the matter is that the weaknesses that exist in our intelligence programs happened in the Carter administration. In one of his "feel good" moves, Carter cut our abilities to surveil as we should. Intricate networks of "spooks" were dismantled, and our ability to keep informed was lost.

Furthermore, our own "open" society demands absolutely no "spying" within our own borders, but "we" also demand to be protected. HOW can we do both? The answer is we CAN'T.

If we want to be assured that no more "9/11" s occur, we are going to have to accept that there WILL be domestic spying, and that sometimes it may crimp someone's "civil rights". But we as a society must strive to find that balance.

Damned if I know how we are going to do it! Everyone has gotten into the "blame game" since the post-WTC "honeymoon" has worn off. The Republicans are trying to get a system into place to thwart another attack, and the Dems are intent on trying to prove that the White House "knew" about the attacks.

Of course had we ACTED on that "information" before hand, the ACLU would have ripped the Administrations eyes out as "arabphobes", or some such other PC term. Since they didn't, and the attacks happened, they are damned for NOT acting...

Go figure...

The question was likely asked because your claims run counter to
reality.
I've been a radio amateur for 39 years and I've never encountered an
"only coder". On what plane of existence are we likely to find an "only
coder"?
Is the practice of transcendental meditation necessary in order to find
what we seek?

Er, excuse me there, mister vshah. Were you aware that "amateur radio"
and "ham radio" are one and the same.

> I have been to several clubs, Hamfests, conventions. I have tried to raise this
> point. But, Hams do not seem to want that.

Could it be that individuals at club meetings, hamfests and conventions
have pointed out that "amateur radio" and "ham radio" are the same thing
and that they believe your "only coder" tales to be fabrications? That
might give you a clue into why your ideas have not met with a warm
reception.

Most seem to be there for appliance
> operation, contesting, ragchewing, dx, etc. The only thing that comes close is
> that Hams seem to get very involved with antennas and become quite good.
> However, this is just so they can better outfit their radios.

That's a very good reason to "become quite good" with antennas. I can't
imagine fiddling with antennas without needing one for a transmitter or
receiver of some kind.

> Also, I found many Hams want to use strange codewords, many that begin with Q.

Speaking as a Math PhD, you're not really correct here. The great
majority of an advanced degree is simple memorization; that's why
you'll still find PhD students cramming for exams. It is equally
possible to complete an advanced degree or an amateur license without
actually "learning the material".

The difference between a EE degree, say, and an amateur license, is
the volume of material to be learned.

We have a generation of kids that are used to the overwhelming sensory
experiences of video games, and even the WWW. In order to gain more
participants, it seems to me that the issue of 'attractiveness' is more
fundamental than the licensing qualifications.

In a way, it makes little sense to decrease the qualifications if they are
already so low, and even that slight impediment is stopping participation.

People today have so many opportunities for day-to-day communications,
that there is even a bit of a movement to hide from the on-demand
communications distractions. Ham radio already has alot of competition
from other communications systems. I am not claiming that current
communications systems are equivalent to Ham Radio, but because there
is a little bit of a 'dream' that is satisfied by Cellular or the WWW (for
example) that makes the results of Ham Radio superficially less exotic
and appear to be less of a challenge. (Of course, that isn't quite true,
but appearances are sometimes more important than reality.)

Ham radio will tend to draw more interest when it can provide a compelling
and glitzy 'features.' This is a difficult thing to decide, because some of the
'best' glitzy things to do might take LOTS of bandwidth and/or might not even be
applicable to ham radio.

I suspect that there are the 'ham radio' club marketing (e.g. ARRL) are
trying to figure out some killer applications for the hobby. Of course, it is
a different kind of killer application than 'Spreadsheet', 'Video games' or
somesuch, but I suspect that there is something out there.

Ham radio already has SOME applications (contests, emergency communications,
casual communications, electronics hobby), but additional *generationally relevent*
applications need to be found.

From what I see on the outside, Ham Radio isn't dying, but given the powerful
tools available, it seems odd that more appropriate high visibility hobby
applications havent been found (or publicized much.)

> draconian than what was actually done).

Here's a hypothesis: By 1963 the Kennedy/Johnson administration had established its influence inside the FCC in the person of one Newton Minow. I don't recall exactly when Minow gave his "Vast Wasteland" speech condemning broadcast television content, but it was sometime in that timeframe. While this sent broadcasters scurrying, I am willing to bet it also sent a very clear signal up and down the ranks of the FCC staffers to be vigilant that other media (broadcast radio, amateur radio) not become "vast wastelands" as well. Given the explosive growth of amateur radio in the 50's, mostly fueled by Conditional-class licensees with lower-middle-class backgrounds and speech characteristics, it is plausible (to me) that many of the upper-middle-class "old guard" were apprehensive that this could be the fate of amateur radio as well - band-edge to band-edge rag-chewing by unskilled "appliance operators" hardly interested in serving the "public interest, convenience and necessity". I think that for a number of FCC staffers concerned with amateur radio regulatory matters, Minow's "wake-up call" to the broadcasters was their green light to crack the Federal whip on the amateur service, which took the form of proposing, then carrying out, incentive licensing.

I realize that correlation does not imply causality. But the timing of the initiation of the FCC action and political climate of the country then does make me wonder.

Same here. But that's ancient history now. VEC system and public Q&A
pools have been around almost 20 years now, and FCC doesn't see
anyhting wrong with 'em. End of story.

There are also a few (only a few!) new and not-so-new folks who think
that just because they passed the test, their learning is done.

How is this a bad thing? Our licenses are for operating, not building.

> The only thing that comes close is
> that Hams seem to get very involved with antennas and become quite good.
> However, this is just so they can better outfit their radios.

What other purpose is there to the theory side other than building
better radios?
>
> Also, I found many Hams want to use strange codewords, many that begin with Q.

They're called abbreviations. They make communication faster and
clearer. Compare "you are are being interfered with by another station
or stations" to "QRM".

> I guess part of the draw of Ham Radio is that they can be part of these
> traditions.

Is that a bad thing?

Then start one that does emphasize those things!
>
> I found it frustrating trying to find Hams that are interested in the
> technical aspects.

Have you tried any of the technically oriented newsgroups or
reflectors? rec.radio.amateur.homebrew, for example?

I'm interested in the technical aspects and operating. Particularly
operating with Morse code. These things are not mutually exclusive.

I've been that way since before I had a license or an EE degree. In
fact, ham radio led me to EE school.

Enough of this - Vshah101 is obviously in put-down mode. Plonk!

Excuse me but in about 1962 or maybe 63 the ARRL picked up the Incentive Licensing flag that was initially proposed by some moron at CQ Magazine.

It was batted around a bit but the LEAGE DID INDEED PUSH IT.

Between 1965 and 1968. I was out of the country so missed a lot of stuff about it then.

In some ways, yes. Ten watts of clean CW is not THAT hard to get - the
Ancient Ones were doing it 70 years ago.

And having a good receiver doesn't make the other guy hear YOU any
better.

Interesting bunch of folks, particularly when you consider the level
of support and advice given out free by both the company and satisfied
buyers. Even if one never buys their product, there's lots to learn.

> > Of course the real miracle is having a spare closet to begin with!

> Quite true.

The way OTs kept nosy siblings and parents away from radio stuff was to leave charged-up capacitors lying around looking innocent. Couple dozen uF with several hundred volts in 'em is very educational. Can't do that today!

Didn't the "only coder" go out of existence about the time we switched
from telegraph to telephone? For a ham hasn't it always been code
plus theory to get licensed? If this is so, then there cannot be such a
thing as an 'only coder' in ham radio!

This part is for "V".
WHAT IS YOUR CALL SIGN Vshah101?

Secret handshake....I had a good laugh over that one. Good
grief...Nothing has ever been secret about morse code. And the funny
part is we hams had nothing to do with implementing a code test. Also,
the license exams are not "know everything or else" types of tests.
They are just meager entrance exams. The usual ham learns much more
AFTER he gets a ticket, not before. Also, it takes many years to learn
all that can be learned about radio, or whatever else related to the
hobby. If thats even possible. I've been farting with this crap for 31
years, and I've still got a long way to go in order to even think I
might know all I need to know. The reality is most will never catch
up. Same with computers, and coding. I've done quite a bit of software
work in regard to flight sims over the years. If I drop out and rest
just for a few months, I fall so far behind the "envelope" that it's
hard to catch up again. The technology progresses that fast. It
progresses almost weekly. When I took my ham test, code was a non
issue. It was part of the test, and you learned it if you wanted a
ticket. Pretty simple really. If they drop the code test totally in
the future, fine. But until then, a 5 wpm test is required, and
whining about it here is not going to make it go away. Sheesh...It
wasn't long ago that 13 and 20 wpm were required. The code whiners
should count their blessings...To me, 5 wpm is no-code for all
practical purposes. It's too slow to be of much use on the air. :/

Yep it has, Mark. W5DXP and W5FQC were the only individuals in
Madisonville High School in the early 50's who knew Morse Code.
We used it quite often to send secret messages that our teachers
couldn't understand and hardly noticed. It was particularly useful
during exams and double dates.

: Exactly....that why it is called 'DUMBED DOWN'.

Now that it's only three steps from entry to Amateur Extra, we hear all about "dumbed down" and that new hams are somehow "children of a lesser god". That attitude defies reason, if the licensee is active in the hobby. How much of the technology required to pass the Extra Class exam, when it was first offered in 1952, be appropriate today? Very little, for sure! Unless you got your license only to achieve some lifetime goal and you've never been an active ham, you know that you have to keep learning more and more about this hobby just to keep in step!

So if you're active in the hobby, the particular license test you took and when you took it and weather you took it in front of some steely-eyed FCC employee or not, becomes less and less relevant with each passing day.

If you're not active in the hobby, then you are rapidly becoming a dinosaur anyhow, again regardless of the test that you took and when you took it.

I'm not here to hear about your labor pains -- I'm here to see the new baby.

I'm actually thinking of looking up a telephone number for WA8ULX. I can't
imagine a ham radio operator actually acting like he does. I especially
can't imagine someone like him passing any kind of test where reading is
required.

Anyone all that sure that this poster isn't a poser?

Did you ever stop to ponder that the "face" of amateur radio is changing,
the times are changing, the world is changing, etc., and so too will amateur
radio and its related requirements, R&?R, *and* traditions? This has
nothing to do with "dumbing down" or any other denigration that you can
muster up.

Things never stay the same.

I certainly don't consider myself one of those few. I feel like I've barely scratched the surface... I still haven't figured out what type of antenna is going to work best for my soon-to-be-bought base rig, and even when I do decide on that, I still have to figure out how to hook everything up, use an antenna tuner, read an SWR meter... and where it's all gonna be set up... these things were covered to a very small degree in the Technician study materials, but beyond that it's learn as you go.

Absolutely. My opinion is that when we start trying to correct someone on
how they communicate on ham radio, it is much like trying to correct someone
from saying things the way they may say them "back home." Where I'm from,
the elders call a closet a clothes press. :)

But, phonetics are not governed by FCC Rules, are they? Now, in a RACES or ARES or otherwise EmCom net, that's a different story. If a certain phonetics is required for communication during a net (actually of any kind) then play by that net's procedures (note: procedures as opposed to FCC Rules).

Here's one for you: how 'bout the phrase "we" when someone is speaking of only theirself? I mean, that just grates on me big time. But, I am not about to even correct or tease about it, because it's not a rules thing--it's a *preference* thing. Do I think the person makes ham radio folks sound pretty dumb when they say that? Yep. But, it's just one of those things.

That was probably a Rules violation. In that case, and in any case, the example above is one where I wouldn't have any problem at all correcting or being corrected.

>
> 2. A different guy though you were supposed to ID at the end of a

>

OK, here's an *excellent* example. If someone said, "you have to ID at the end of every transmission," I would certainly be compelled to quote R&R so that any misperception is alleviated. HOWEVER, that having been said, if someone wants to ID at the end of every transmission, that's his/her preference.

Here's the thing: it's my opinion (and I've witnessed this happen time after time around here) that if someone gets on with really bad communication skills...it soon becomes evident and they gradually find less and less

responses to their calls--until they are finally gone.

> Again.... even though I do not like the term "policing" in the phrase

> "Symbolism is for the simple minded....."

On your last note, yes, we are a self-policing body. However, I never took that to mean that communication preferences were to be corrected. There's nothing that grates on me more than to hear the term "we don't do it like that." Now, that is separate and apart from net policies and practices because, as I said, that's a whole different ballgame.

I guess I look at the non-net side of ham radio as a time to just kick back and relax. I am not going to worry about what or how I am saying something and I'm not going to preoccupy or worry myself about what or how someone else is saying something. I'm there to just ragchew. If I say 10-4 (which I don't and never have) once or twice, wow, no prob. If I say it all the time, I'd fully expect to lose contacts and be shunned.

By the way, I'm really enjoying this exchange...one very different from the usual exchanges here in the newsgroup. This is as it should be.

Oh, man!!! I couldn't agree with you more, Ryan. It's a scarey thing
what's happening. Here's the thing: with or without 9/11 I felt like this
would happen. The more a Conservative (Republican or otherwise) uses the
phrase "less government," the more I look over my shoulder.

9/11 just made it a whole lot easier and escalated the turn of events that
would have come about any way.

:-)
...and it certainly offends the new neo-nazis who just love to
do nearly the same.

>BZZZZZT! You lose, "Vshah101".

Sorry, Mr. N2EY, you are NOT the moderator in here...nor are
you any judge over "winning" or "losing."

>> Most seem to be there for appliance
>> operation, contesting, ragchewing, dx, etc.
>
>How is this a bad thing? Our licenses are for operating, not building.

Oh, my, an accomplished super-duper extra that doesn't know
the regulations?!? The FCC considers an amateur radio license
to be BOTH an operator AND station license. It is IN the rules.

>> The only thing that comes close is
>> that Hams seem to get very involved with antennas and become quite good.
>> However, this is just so they can better outfit their radios.
>
>What other purpose is there to the theory side other than building
>better radios?

1. Knowing how their "un-better" radios are so much lesser than
their "better" radios. Those who "design and build their own
ham gear" ought to be cautious about claiming "design" of an
already-designed KIT purchased from others.
2. There are several sub-parts in the US amateur radio regulations
which are the responsibility of each licensee to meet. That
responsibility is part and parcel of licensing. To say "it's only
about operating" is the same as a schoolchild trying to tell
their teacher "my dog ate my homework." :-)
3. Some in here wave the hero flag about "providing emergency

communications" (to save the nation, world, universe, etc.)
from 97.1 (a), they seem to be totally blind to 97.1 (b),
97.1 (c), and 97.1 (d). ALL those definitions in 97.1 are
equally applicable...there is no distinction given as to which
if "first" or "last."
4. To say that it is ONLY "about operating" is making it just
another CB-like radio service but with a federal license.

>> Also, I found many Hams want to use strange codewords, many that begin with
>Q.
>
>They're called abbreviations. They make communication faster and
>clearer. Compare "you are are being interfered with by another station
>or stations" to "QRM".

Yes, and "QSY" means to change frequency to anyone in old-time
HF radio, any HF radio service.

It was common 30, 20, 10 years ago, up to today to hear long-
time amateurs on HF voice use the very flat "hi-hi" instead of
actually laughing. Not a natural voice mode substitute or even
abbreviation for laughter. Apparently there is little natural
laughter among long-time HF amateurs? :-)

>> I guess part of the draw of Ham Radio is that they can be part of these
>> traditions.
>
>Is that a bad thing?

Not at all. Add in the secret handshakes, importance in appearance
through walls full of certificates, always signing their written
correspondence to anyone with the amateur call sign, and making
sure that their work title is always preceded by the word "ham" such
as "ham-actor" or "ham-butcher" or the like. Tradition or gratuitous
self-importance? :-)

>> Most Hams are male, few are technical.
>
>> Calling CQ and getting on the air is what interests them.
>>
>Our licenses are for operating, not "being technical".

Do you wish a third reminder of what the regulations say
that a US amateur license is for BOTH operator and station?

Hmmm...I had thought the designer of his K2 could correct
himself in regards to his regulations?

>I have no idea what this is supposed to mean.

I had no idea that a long-time extra ham-person forgot what
US amateur radio regulations apply to him...tsk, tsk, tsk.

>> I found it frustrating trying to find Hams that are interested in the
>> technical aspects.
>
>Have you tried any of the technically oriented newsgroups or

Some good thoughts, John, but I would like to add a few things:

The general public has been aware of "radio" as well as television
for over two generations of time. Long distance communications
over several mediums is readily available to the general public:
Direct-dial telephones to any place in the world that has telephones;
International TV viewable on TV broadcast news; Facsimile
machines in drug store chains and department stores; Public
Safety Radio seen and heard in-person as well as over entertainment
media; CB radio that has been around since 1958, equipment now
available in hardware and department stores.

The general public, all ages, are well aware that radio exists, has
existed in many forms for years...for the last half century at least.
To better understand the general public (the target of publicity),
one has to look at what they see, hear, sense, understand.

>Ham radio will tend to draw more interest when it can provide a compelling
>and glitzy 'features.' This is a difficult thing to decide, because some of
the
>'best' glitzy things to do might take LOTS of bandwidth and/or might not even
be
>applicable to ham radio.
>
>I suspect that there are the 'ham radio' club marketing (e.g. ARRL) are
>trying to figure out some killer applications for the hobby.

Present-day or recent past "killer aps" involving technology were devised by individuals in the beginning. Please avoid looking at the latter-day results of the general marketplace that grew those "killer aps." Please avoid trying to copy present-day high-volume entertainment applications...Pong was originally a technology-simple game that only a few in the general public enjoyed. But electronic games grew and prospered through both technology increases and business marketing efforts. Today's electronic games are many orders of magnitude above the first Pong.

Trying for an analogue to the Internet or even the old BBS electronic communications area is a mistake both to try implementation as well as trying to negatively criticize and denigrate it. Internet comm has too much infrastructure and depends largely on business to keep it going. The general public is well aware of the Internet and, from the Census Bureau through NIST, one in five US households had some form of Internet access last year.

>Of course, it is
>a different kind of killer application than 'Spreadsheet', 'Video games' or
>somesuch, but I suspect that there is something out there.
>
>Ham radio already has SOME applications (contests, emergency communications,
>casual communications, electronics hobby), but additional *generationally
>relevent* applications need to be found.

I don't quite understand the "generationally relevant" designator. If that means solely the pre-adult population of today, then I'd say that the publicity battle is lost before it has begun. That generation already has tangible wonderful entertainment devices available, surpassing what was there a decade ago and far surpassing that of two, three, four decades ago.

For those generations that passed first year of adulthood, they already know radio exists in many forms. They are living in the new millennium where the standards and practices of their avocational activities are not absolutely rooted in the 1930s. To the general public "radio" is not an arcane "mystery" or "magic," just another in a collection of commonplace technology-based things that they have available.

In order to "get through" to the general public, the publicist has to understand them and realize that the publicist's own fervent opinions about an activity won't apply to enough of them. No matter how loyal

or even religious the publicist is about their own activity, the general public just isn't going to accept that on face-value. The general public has to be shown something attractive to them as a group, not just to the publicist.

>From what I see on the outside, Ham Radio isn't dying, but given the powerful
>tools available, it seems odd that more appropriate high visibility hobby
>applications havent been found (or publicized much.)

One of the biggest obstacles is the inwards-looking general actions of the ARRL. ARRL publicizes itself primarily to other radio amateurs and rarely reaches out to the general public. That seems correct to ARRL in that they congratulate themselves unduly as to the work ARRL is doing. They must congratulate themselves to make it look like they are "doing the job" in order to gain memberships and keep current members enrolled. Despite the near-gratuitous self-praise of "public eduction" efforts, the undeniable fact is that they rarely get national exposure about amateur radio to the general public.

US amateur radio isn't "dying." Unfortunately, it has reached a stagnant point where licensees are not increasing with the general population increase. Some licensees will explode with rage that anyone dares to say "bad things" about Their activity, Their love. While they feel righteous in their wrath, they are unable to understand that the general public just isn't impressed by Their ham-love or Their wonderful personal accomplishments in an essentially-avocational activity. Those just won't make effective swayers of public opinion.

The decrease in amateur radio licensees will probably begin showing in another decade or two. Undeniable actuarial-table facts will start manifesting themselves, offspring will go towards their own interests instead of bowing to familial pressure. The old standards and practices will appear even older and less attractive. The only possible survival is to accept change rather than resist it.

True enough it is a class distinction. I wrestled with the idea of going for a 1X2 for a while. It would be a great help in contesting. But after seeing the grief some new hams caught for their perfidy, I decided that KB3EIA was just fine - at least for ten years or so.

> Glendale, Arizona

If you go back to the actual FCC documentation you find a generic
set of complaints claiming the hams were not up to the equivalency
of their earlier hams in the eyes of industry, military, etc. The problem
wasn't a lack of knowledge...but rather the onslaught of technology
as an ever enlarging body of knowledge that couldn't be mastered
simply by learning basics.

Remember, in the 30s and 40s the entire body of technical knowledge
could pretty much be mastered by the average person with a good
slant towards science. There was no digital technology, the components
were all discrete, no solid state devices, no digital processing, no SSB
even.
Hams could be hired directly into technician type jobs by industry
and do very well. By the late 50s, that was changing...again, not
because hams knew less, but rather the fact that industry demanded
more knowledge of the technician types. Consumer electronics had
been essentially the recieveing side of a hams knowledge plus a simple
amplifier for the phonograph. Enter the TV and then color TV and
things got more complex. The same too for industry and military
electronics.

Anyway, the incentive licensing never solved that problem and, in
the long run, the industry evolved to "throw-away" products. If
you don't believe that, check out the cost of a basic function
VCR, DVD, etc. Why would anyone pay $50 an hour to have
someone attempt to repair a product that costs under $100?

Anyway, just some thoughts.

Cheers,
Bill K2UNK

Its already too late. Big bro already has your 'number'. If you ever had a drivers license. Bought a house. Had a bank account...had a SS number.... gone to a doctor. etc.

Not to mention your ham license. And the big one is if you ever were in the military. Active/Reserve or dependent.

Now they have legal access. Thats all.

I took my 'Phone license tests in 1952 (New York Field Office) and
the only essay questions were the famous "ten questions" on rules
(exact canned answers required) in Element 1, which in conjunction
with the multiple-guess Element 2 questions on radiotelephone voice
procedure qualified one for the Third Class 'Phone Permit. All the
technical questions (Element 3 for the Second Class 'Phone License
and Element 4 for the First Class 'Phone License) were multiple guess
except for correcting several diagrams. I remember the multiple-guess
format well because I screwed up a whole page of them on allowable
frequency tolerances but passed anyhow.

With a few major differences (and more than a few). Read the Patriot Act.
Who was it who said, "even though the laws are being enacted to combat
terrorism and terrorists, how long do you think it will be before the US
Gov't. begins using its newfound powers on its own citizens, and justify it
with cause that people will bless?" It wasn't me...I just recently read or
heard that but can't think of where.

>wastelands" as well.

Fascinating concept!

I have previously speculated that "Sputnik fever" may have had something to do with it, as well. In those early years of the "space race" (1957-1965 or so) it seemed like the Soviets were always there first. First artificial satellite, first animal in space, first man and woman in space, first pictures of the far side of the moon, etc., etc. Meanwhile, the USA had some spectacular failures. Of course the Soviets couldn't keep up once NASA got rolling, but in those early days there were some grim faces.

>Given the explosive growth of amateur
>radio in the 50's, mostly fueled by Conditional-class licensees
>with lower-middle-class backgrounds and speech characteristics,
>it is plausible (to me) that many of the upper-middle-class "old

>guard" were apprehensive that this could be the fate of amateur
>radio as well - band-edge to band-edge rag-chewing by unskilled
>"appliance operators" hardly interested in serving the "public
>interest, convenience and necessity".

Possibly. FCC had brough this on themselves, though. First they gave Conditionals all privileges, then they reduced the distance requirement from 125 to 75 miles. To top it off, FCC eliminated the requirement that Conditionals who moved close enough to an FCC exam point had to retest or lose their licenses.

They completely missed the real causes, though: Advances in technology such as smaller parts and better tubes, plus mass production techniques, resulted in smaller and less-expensive manufactured gear. Increasing affluence meant more hams who could afford to buy it. The introduction of SSB transceivers and grounded-grid linears also accelerated the trend away from homebrewing by reducing the cost of high power 'phone even more.

> I think that for a number
>of FCC staffers concerned with amateur radio regulatory matters,
>Minow's "wake-up call" to the broadcasters was their green light to
>crack the Federal whip on the amateur service, which took the form
>of proposing, then carrying out, incentive licensing.

Quite a reasonable theory, I'd say.

>I realize that correlation does not imply causality. But the
>timing of the initiation of the FCC action and political climate
>of the country then does make me wonder.
>
It all fits. The early articles point out that the FCC was disappointed by how few hams had gotten Extras in the 1953-1963 period.

But what still remains is the question about why the FCC did the Great Giveaway of December 1952 in the first place. Which set the stage for 1963.

Well, Len, a damned good post. My only question is WHO is "resisting" the change? I see the change in the technology and the Feds are going as fast as bureacracy will allow to adapt that technology.

They have already made it clear that Morse testing will be dropped when the treaty allows, so that "obstacle" (not that it is one) will be gone in a year or two.

There need not be a first or last..ALL are aopplicable as to what the FCC expects the general public to glean from Amateur Radio. It just so happens that "emergency communications" usually tends to be the most visable and beneficial.

Why is that a problem for you?

Source record: 56514

Wow, that's really funny! Although attempting to put down no-code Technicians, this is a good picture of how the public views CODE KNOWING hams. (Not that this impression is justified).

The same poking fun at no-coders, the public will poke fun at those "Morse using Ham Radio operators".Hams are viewed as antisocial nerds.

The general public views Hams as people that are nerdy, use Morse code, and confuse them with CBers. I tried to mention Ham radio to some people. Also, I told them about Hamfests.

One person asked me if Hams use Morse code. Obviously, the public has the impression that Hams use Morse code. Then, he compared Ham Radio to a cult.

He asked me if Hams have social like events. When I mentioned Hamfests, he compared them to a Star Trek convention.

Another person (different occasion) said "breaker breaker". (To the public Ham and CB are almost the same).

If all you know is code and have no understanding of the technical material, then you are just an appliance operator. This will lead to the true dumbing down of Amateur Radio.

The public has a negative impression of Morse coders. Having enough Morse coders will serve Amateur Radio well. Having too many, or tying license class to the code will hurt the public's impression of Amateur radio. There is alot of enthusiasm for Morse coding that it will not go away if the requirement is removed.

I am willing to do the work for these types of activities. I have sincerely tried to get these types of activities at a few clubs. However, there is NO interest in the clubs. I bring up the interesting ideas at meetings, the current groups of Hams seem to want to keep it an appliance operator hobby. If you want to see these types of activities, petition your club.

One can ponder about how Ham Radio could best suited
- without really considering it a question of emotional or social behavior. Boy would that be wrong. Ham Radio could live and die on very strange human,
emotional, and social interactions. Technical merit takes a back seat in any story of acceptance.

Look at something like the only code life-cycle. It
was at least as much a social story as a technical one. The no-code technical mix attracted a certain kind of early adopter, and that adopter

in turn defined the culture (with some culture-hacking by code advocates). The culture, ultimately, could not adequately support the hobby.

By the way, I have been able to master another type of real time encoding scheme. One that I find enjoyable. I do not find Morse enjoyable or worthwhile, when I could be maintaining technical skills.

KB1XXX Technician Class Amateur Radio Licence

Where the hell in this or for that matter have I made the statement or in defense of the statement "Dumbing Down" unless it was in a quote? That is not my mantra, and if you believe so, you are definitely mistaken. What are these so called denigrations you accuse me of ??

As well as some public service/emergency service users also have a DTMF sounding tone at the end of their transmissions as well.

Well... I guess I still look at the whole thing this way, if newbies are "such" lids as stated by long-timers, how do the become better operators?? I am sure that some of the long-timers in ham radio weren't perfect right out of the box, and that some of them made errors along the way. And I will state it again, its all in how a person corrects an action, diplomatically or like a rude idiot.....

>

>

Well, I don't ragchew much, mostly because it must be some rule that hams around here cannot operate when the sun goes down, which is usually when I *start* my day. I am a firm believer in professional in anything I do, and strive to be the best that I can be, and to learn from my mistakes. Granted I fully admit I am nowhere close to perfect, but at least I have a goal. If you look at my operational schedule, I average about 2 minutes of transmitted time per day on the average week. I do however monitor upwards of 15 hours per day.

Technicians,
> this is a good picture of how the public views CODE KNOWING hams. (Not
that
> this impression is justified).

Do you really think the average Joe public-on-the-street has enough background of this hobby to differentiate between those who know CW vs. those who don't, let alone what that might mean to them? I highly doubt that those who're ignorant of amateur radio know or care what modes of communication hams use within the hobby.

> The general public views Hams as people that are nerdy, use Morse code,
and
> confuse them with CBers.

Hmm, I have to wonder which cross-section of the general public you've talked to. A couple of non-hams I've talked to had the idea that the ARS (Hams, whatever) were the folks that came in to disaster areas to help out the Red Cross and National Guard. The area I live in has suffered from several wicked tornadoes and major flooding in the past decade, and apparently local hams have been active in helping to facilitate communications in those affected areas to the point that the general public took notice. It was this service that brought the ARS/Hams to the eyes of those I talked to which were, admittedly, just a couple of people. Interesting though how the impressions you get depend on who you talk to.

> One person asked me if Hams use Morse code. Obviously, the public has the
> impression that Hams use Morse code. Then, he compared Ham Radio to a
cult.

One guy I talked to was surprised that anyone still used Morse Code. He associated it with the Old West and ship-sinking disasters and was not aware that it was still a viable mode in some venues.

> He asked me if Hams have social like events. When I mentioned Hamfests, he
> compared them to a Star Trek convention.

Did you ask this person what the basis was for this comparison? As a former coin collector, I found your average bourse to be quite filled with hobby nerds as well. But they weren't all dressed as Klingons and Vulcans, at least.

> Another person (different occasion) said "breaker breaker". (To the public
Ham
> and CB are almost the same).

Really? I always thought that CB died out in the late 70's, right after that song by C.W. McCall left the charts (I was very young when it came out, but still remember that song, echhhh).

> If all you know is code and have no understanding of the technical
material,
> then you are just an appliance operator. This will lead to the true
dumbing
> down of Amateur Radio.

I have not been in this hobby for very long, but I don't know any hams who can ONLY converse via Morse... most of the ones I've run across actually know how to speak and type too. :-)

> The public has a negative impression of Morse coders.

To the contrary, I think that this monolithic group you refer to as "the public" have little to no idea that Morse is still being used or who is still using it.

> Having too many, or tying license class
> to the code will hurt the public's impression of Amateur radio.

Again, I don't think the vast majority of the general public really know or care about the subject of Morse. I'm not talking about a small cross-section of the public like your acquaintances, friends or family; I'm talking about your average Joes and Janes who're walking in a crowded downtown area during their lunch hour. This is the section of the populace I'd like to see polled on the CW subject.

> I am willing to do the work for these types of activities.

I'm curious, then, vshah, if you would be willing to take your assertions to test them among the general public in the form of an ad-hoc poll, just to see what a small cross-section of total strangers really think about ham radio or Morse code... make up a poll, stand on a corner of a busy downtown metropolitan-area street during lunch hour, and see how many people you can get to talk to you about it. From those responses, see how many people actually have the slightest idea as to what you are referring to.

>How much of the technology required to pass the Extra Class exam, when it >was first offered in 1952, be appropriate today? Very little, for sure!

I just happen to have a 1954 License Manual right here. The Extra study guide is 279 essay-type questions and answers. Of the 279, at least 28 are "draw a schematic diagram" questions, and a few more involve block diagrams like the one of a phasing-type SSB transmitter.

The technology in the exams back then was all tubes, so a lot of it has very limited application today (magnetrons and high power transmitting tubes, for example).. Many of the rules have changed, too.

But a lot of the theory still applies - transformers, transmission lines, Ohm's Law, basics of AM, SSB, FM, TV, microwaves, antennas, receivers, transmitters, and much more. Example: in 1952 you had to figure out what the accuracy of a frequency measurement would be, given a freq meter or xtal of a given percentage accuracy. Today there are questions on the accuracy of a freq counter reading when the counter is spec'd to so many parts per million. Somebody who really understands one problem could probably figure out the other.

I have to disagree with this a little, Bill. Hams were using SSB in the early
'30s. QST and other mags had TV articles even before WW2. The technology of the
'40s included radar, TV, SSB, and minaturization - though those "miniature"
components seem huge today.

Yet it was in late '52 that FCC gutted its incentive licensing program!

>Hams could be hired directly into technician type jobs by industry
>and do very well. By the late 50s, that was changing...again, not

>things got more complex. The same too for industry and military
>electronics.

True to a certain extent, but there was more to it. The field of electronics
widened far beyond what hams used, into areas that had little to do with radio
communication. A ham in the '30s and '40s had to be "technical" even to get
build a rig and get it on the air - or very rich. Even the prewar manufactured
stuff required some serious know-how in order to be used. Postwar affluence and
mass production changed all that.

>VCR, DVD, etc. Why would anyone pay $50 an hour to have
>someone attempt to repair a product that costs under $100?

Exactly. I recently saw a rule of thumb that said when the price of a consumer electronics item drops to the point where the typical repair is one-third the price of a replacement, repair shops die out from lack of business.

>Anyway, just some thoughts.

Pretty interesting ones. Seems to me that the FCC didn't really understand what was going on in the first place, back then.

And what it really comes down to is this: If ham radio is confined to those who have lots of technical focus and ability, it will be a very small service.

How many hams would there be, and what technology would we be using, if there were no more code tests - but all of us had to homebrew all our equipment?

Apparently there is more than just the freeband that the FCC is ignoring.
Their interest is in big money (broadcast companies).

Please show some proof that a station license indicates designing or
building something. Do you know what a station license is? Looks like
you've misunderstood the regs. "Oh my", indeed!

> >> The only thing that comes close is
> >> that Hams seem to get very involved with antennas and become quite good.

> their teacher "my dog ate my homework." :-)

You may build anything you like without ever taking an amateur radio
exam. What you may not do, sans license, is operate it in the amateur
service. You must have known that.

> 3. Some in here wave the hero flag about "providing emergency
> communications" (to save the nation, world, universe, etc.)

> if "first" or "last."

...but you digress.

> 4. To say that it is ONLY "about operating" is making it just
> another CB-like radio service but with a federal license.

"It" isn't totally about operating but an amateur radio license conveys
a) operating permission and b) a callsign. That's all. Your comparison
to the Citizens Band isn't valid for, as you've often pointed out, you
were there--you know. The Citizens Band was a licensed service for much
of its existence. A big difference between the two was that amateur ops
must pass a licensing exam.
The amateur license conveys much greater privileges than CBers ever had.

Kim
The big difference between the Democrats and the Republicans is this:
If the Democrats wanted to increase your income tax to 100% they
would have it take effect in January of the next year, the Republicans
would fight to do the same thing and phase it in over a 7 year period.
It ends up as the same thing just a little more time to get used to it!

Politicians on the evolutionary scale are just below used car
salesmen and just above bottom feeding fish!

By definition, this is an amateur radio newsgroup. Perhaps you'll be
able to drum up some admiration for your life membership in the IEEE in
the rec.radio.professional.vip newsgroup. It'll have to be better than
trying to engage long time hams in a dribbling contest.

P.S. You'll likely not want to let those folks know of your being
foiled in obtaining a mere amateur radio license. If you slant your
postings toward, "I showed those uppity hams a thing or two", you'll
achieve higher status. Don't lay it on too thick as a number of them
are also hams.

My gut feeling is that the general public (at least in areas unaffected recently by any emergencies answered by hams or cbers) doesn't know the difference and couldn't care less. Certainly the bickering between codeless techs, other licensed amateurs, and cbers does nothing either. Just my two pennies' worth (say, when did they drop the 'cents' from keyboards? I remember 'em years ago on typewriters ...)

The whole fight is similar to the fights between sailboaters and
motorboaters, arguing which is more technically advanced, which can get
through when conditions are bad, which is modern vs. invented in the olden
days, etc., etc., etc. Meanwhile, on the shore a group of commercial
developers is plotting to buy the lake, drain it, and build a strip mall.

Rather than band together to save our hobby, we seem hell-bent on finding
inconsequential things to fight about, splintering and diluting whatever
influence we have on regulators and the general public.

Jim, N2EY, replied:

> It all fits. The early articles point out that the FCC was disappointed by how
> few hams had gotten Extras in the 1953-1963 period.

> But what still remains is the question about why the FCC did the Great Giveaway
> of December 1952 in the first place. Which set the stage for 1963.

More speculation on my part:

Dewey beat Truman in '48......

Oh, wait, he didn't either, but the postwar boom was in
full swing in '52 and the whole country was becoming more
conservative, pro-business, anti-communist and, perhaps,
a little less tolerant of arbitrary government regulation.

The years during and following WWII saw radiotelephone come
into technological maturity (as did SSB a decade later, as
Bill Sohl pointed out) and one no longer had to be a
"radio genius" to put a 'phone rig on the air on any amateur
band. It was at least technically possible to expand the
privileges. And ham radio had shown itself to be a "Good
Thing" during WWII and so, perhaps, deserving of government-
policy encouragement and growth.

> I have previously speculated that "Sputnik fever" may have
> had something to do with it, as well. In those early years
> of the "space race" (1957-1965 or so) it seemed like the
> Soviets were always there first.

That was the undeniable impetus behind much of the US govt.
policy-making in that era. It seems to me that it dovetails
(to as certain extent) with my Newton Minow theory. Behind
both is the assumption that technical advancement and
technical competence and be legislated "top-down".

Ham radio seems to be somewhat like the U.S. Supreme Court.
It reads the election results... but ten years after they
happen.

Yeah, I remember that sad litany being recited in the pages
of QST in those days.

> Anyway, the incentive licensing never solved that problem and, in
> the long run, the industry evolved to "throw-away" products.....

It's a prime example of trying to impose a top-down, government-
mandated impetus to technological evolution. The FCC policy-
makers didn't then have the vision and foresight to predict the
future. And they don't now. But, it does seem that now they
have gotten a little smarter about keeping their R&O-signing
pens in their pockets, observing what evolves in the marketplace,
and concentrating on protecting the legal rights of the spectrum
users.

> components seem huge today.

I think it was a matter of subsidiary, enabling technologies
coming on-line in the 50's that led to the widespread
adoption of SSB in the 60's. The two I have in mind are
the development of planar bipolar transistors and, most
important, encapsulated, precision, IF sideband crystal
filters. The latter allowed cheap, reproducible SSB
transceivers to be manufactured (in Japan) and to become
the dominant HF ham rig by the mid-60's.

It's true that SSB principles were well-known in the 30's,
and some advanced hams had SSB rigs on the air back then.
But, to tell the truth, they couldn't be deployed en masse
until some very humble, and very small, components came
into common practice.

Well said, Hans! There are too many here, both Pro-CW and Anti-CW, who
do the service a great disservice. Those who seem to hate the ARS
because it is changing in ways they do not like, and those who seem to
hate it because it is not exactly what they want it to be.

That's six for six. By coincidence, there was a recent news article about some computer wiz kids from Drexel University that went six for six when they hacked into the nationwide paramutual network. That's the network that handles all of the off-track horse betting in the U.S. They're now facing felony wire fraud charges. They, too, are proclaiming that they did nothing wrong.

Also true. Unfortunately, (many) Hams are probably not the best people to get involved in public relations. For better or worse, many of us are techno-nerds, immersed in the technical aspects of the hobby, and not in the social graces. I myself have been guilty of this. This would hopefully be a job that the ARRL would perform. But this makes a loop with your other point regarding the ARRL - they can but don't.

> recent test.
>

Back in 1976 I took the general written and novice code to get an old
fashioned tech (now "super tech plus") license. One of the questions
went something like this: "Your linear uses 800V DC on the plates of the
output tubes. How much current can you let the tubes draw?" Here you
needed to know two things: how to calculate input power, and what the
legal power limit was back then. It's volts times amps, and 1KW input
legal limit. And the usual rules questions. And what the subband
frequency boundaries were.

See if you can find one of those infamous Bash books. What Mr Bash
did was interview people who just took the tests as they left
the FCC field offices. And publish what they remember what was
on the tests. And unlike other licensed activities like flying or bus
driving, there's no real risk to the public if someone does "fake"
his way thru the tests and gets licensed. There's no real difference
between what an extra can do vs a general other than operate on
certain subbands. Not like a pilot's license where you need to
upgrade to fly on instruments vs visual.

Wise Ones live in the depths of the D, E, and F-Layers, and in the servers at
google.com. They are the descendants of the Gods. I personally subscribe to
the theory they are the children of Thor Heyerdahl, the Viking god of Thunder
and Balsawood Raft Dxpeditions. But that's another story.

The Wise Ones control everything that happens on the air and on the Usenet,
but they can't police every pileup or every newsgroup by themselves, so every
morning, just before daylight over Katmandu, the Wise Ones select the "Mostest
Intellegentest DXer" in their layer and convey upon him the title INFLICTOR OF
HIGHER MORAL HARANGUES. This title and its duties last until the following dawn
on Bouvet, if someone is there to observe the sunrise. Otherwise your duties end
when K2ASP gets tired of your crap and sends his lawyers with a gag order.

If you are ever chosen you will know because a representative of the Wise Ones
will anoint your temples with oil from a thirty-five year old bottle of Dr.
Guano, collected on Ocean Island by VR1L in 1966. For that day you will be known
as The Chosen. Your duties will be to seek out those that don't things the way
you do them (in other words, the right way.) When you find them, it will be your
duty to correct them.

Think about it...too wide, too weak, too slow, too fast, what's your call admit,
wrong VFO, rotten fist, poor pileup control, wrong band, wrong QSL route, you
timed out the repeater, wrong lingo, not enough green stamps, you're in the DX
window, no-coders not allowed, coders suck, ... They're all yours.

When you find these wayward ones, you will lumber onto their frequency, stand up
in your operating chair and shout, I AM SMARTER THAN YOU, SHUT UP AND LISTEN.
You will now have the wayward one's undivided attention. He will think about

this very briefly, then yield to your superior intellect. He will be very receptive to your thoughts and point of view.

Lecture him and proceed to the next wrong doer.

Now for the sad part of this tale. There are pretenders and charlatans out there
who try to usurp the rightful powers of The Chosen. To you villainous few, I say
beware. The Wise Ones also created BAWA (Baddest Ass Whats Around). No matter
how bad you are, BAWA has the ability to be badder. You will know when you start
your lecture and Bawa yells back, "You're a jerk, but I'm a bigger one. LET'S
ESCALATE".

And you will have no choice.

But soon BAWA will tire of you and sink your little balsa boat. As you slip under the surface you will yell, "BUT I WAS RIGHT, DAMMIT" and you will once again prove the ancient mariners axiom -- AN OPEN MOUTH TAKES ON WATER.

dit dit

I sure hope "amateur radio" isn't being billed as an "alternative
lifestyle" choice by professional radio-electronics folks. That would
make us "odd" by comparison.

But I'll bet that the Ph.D. dissertation was not a simple matter of memorization. I'll also wager that the year or more of pure research that went in to it was not simple memorization either. The Ph.D. dissertation, as I understand it, requires the Ph.D. candidate to do original research work in their field.

The "simple memorization" your speaking about is the necessary accumulation of theory, with the resulting formulations - theorems - and proofs to support it. However none of it does you any good without knowing how to apply it. That's where the learning part comes in. I've seen people who can reproduce every equation they have memorized at will, but don't have a clue what to do with them because they haven't "learned" to apply them.

My point about the Ham exams, they way they are now, it is entirely possible for one to pass all of them up to Extra, and not understand even basic ohm's law. For a university degree I have yet to see one that is granted where all of the exams are freely published along with all of the correct answers before one takes the exams. I've had several Hams, from Tech to Extra, that have admitted to the yellow high-liter method however.

So if WA8ULX says they, university grads, haven't proved anything, well I think they have. The integrity of the testing process is far higher for a university degree that for the current crop of Ham Radio exams. I would have more confidence that an university EE grad knows basic electronics than I would a Ham of any license class without an EE degree.

The sad state of testing in the US has been discussed at length on this group at times. If WA8ULX wants to be such a snob about being an Extra Class then he should work on getting some credibility back in to

the written testing process. There is nothing funnier than a Ham who
can pound out 45 wpm, but yet can't figure out how to wire up his key
to his rig. ;-)

At the bench and commercial/military applied levels in the 30s & 40s
of course Bill but certainly not at the level of the technological
visionaries who gave us the bases for what we have today. ALL of it.
Particularly after Shockley did his trick which prolly forever left
ham radio in the dust wrt to ham radio leading any significnt
technological advances.

I think yer at least a decade early, I don't recollect any 1965 +/-
Japanese hollow or solid state HF ssb xcvrs.

>
> It's true that SSB principles were well-known in the 30's,

Single slideband wuz PATENTED in 1923.

> and some advanced hams had SSB rigs on the air back then.

1934 to be exact, eleven years late into the game and long after AT&T
had the stuff running in their circuits.

And along comes Hedy Baby the 40's pinup and B-24 nose art queen and her producer who came up with Spread Spectrum. Two of my single-digit age "nocode" grandchullins tote throwaway SS xvrs around in their jeans and here we sits still waiting for the first ever SS qso to actually happen on the ham bands. You bet there's a message there.

Methinks it's long past time to quit hanging onto the past and accept ham radio for what it really is today. Which has nothing to do with the decades-old basic technologies involved and everything to do with . . you fill in the blanks.

Scratching head incredulously

I don't understand... do you literally mean that there are some people out there who took and passed the CW test (at whatever speed was required at the time to obtain an upgraded license at that time) and yet didn't understand one whit of the material (I assume you mean everything in the study guides that didn't have to do with CW) and as a result, do not understand one thing about SSB, FM or anything having to do with using one's voice? Man, I pity those poor "only-coders" who don't understand the rudiments of PTT then.

Vshah, as I said earlier, I'm not going to comment on the code vs. no code debate, but your assertions smack of hyperbole. I really doubt that you can categorize hams so neatly as you have tried. What about the in-betweens who hold a somewhat neutral opinion of the whole CW vs. no CW debate, and like to explore the hobby beyond one or two modes of doing it?

73 to you,

Jackie

Jackie, don't waste to much time trying to understand this dude and his "crystal clear" rantings. He's about as clueless at they come. Some of us believe he's a retread from several years ago, an induhvidual who called himself "Cutie Boy" who had little expertise in English and who departed the NG for parts not known. If it's him, and I sure believe it is based on his syntax and ability to really mess up phaseolgy in exactly the same way, his opinions won't be undestandable most of the time and pointless the rest.

Dick

{snippers}

> Wow, code must make one smart.

A facility with CW makes one good at CW and able to converse with those who also use CW. Knowing and using CW makes one CW-smart. Which is great, if this is what you like to do.

I have a working knowledge of three other languages besides English, but that doesn't make me smarter than someone who only uses English. How much value you place in using CW (or any other mode of radio communication) is a personal thing, and who can tell you who to hang out with, converse with, and how to enjoy your hobby? Being so new to amateur radio, I don't know to what extent, if any, a facility in CW makes one a better ham in general. Perhaps it depends on what you want to do in the hobby.

I've known and worked with a couple of professiorial polyglot types who treated others they perceived to be less "smart" than themselves with any sort of deference- regardless of the myriad other facilities these "lessers" may have had over the professors- so I remain unconvinced that a facility to communicate in more than one mode or language makes an a**hole any less of an a**hole. To the contrary, the more languages an a**hole can express themselves in, the more people can identify them and subsequently avoid them.

I've had other hobbies that were rife with the attitude of "this way is the only way to do this hobby, vs. that way", too. Specialization in a certain area often breeds polarization. I believe that's what happens when you get to be really good at something-- you've been there, done that, and you form opinions. Just like everyone else who has been there, done that, and has formed their own opinions, which may not coincide with others who share their hobby.

Now, if amateur radio is *mainly* a hobby, then it's something that we choose to pursue in our leisure, and we are not pressured to do it "one way or another", no matter what anyone else says. Like ragchewing on the local repeaters, DXing on 6 meters or contesting on HF? Like to help out with communications during parades, be a valuable community asset during a local disaster, or any number of other things our licenses allow us to do? Who can tell you that ANY of this is wrong, so long as such activity is sanctioned within the confines of the C.F.R. as it relates to the ARS?

However, as far as I know, right at this moment (8:00 pm CST on 11/26/02) a 5 WPM proficiency in CW is still required in order for any licensed amateur

to be able to access some-to-all of the HF bands; the procedural value of which I will suspend any value judgments on right now, but neither do I want to wait until 2003 (or whenever the FCC gets around to abolishing all CW requirements for HF privileges in the U.S.) to try out the HF bands. Who knows, I may learn CW and like to use it, or I may end up thinking that it is more trouble than it is worth. My point is that a passing knowledge of CW is, right now, required for me to be able to explore what I want to explore in this hobby.

I've always thought that more knowledge is better than less when it comes to most any subject. I'd rather *know* more and use what I do know less. There are many fun possibilities extant within this hobby. I may decide to leave many of those modes by the wayside after exploring them. As far as I am concerned, it's better to know more than less, even if you don't use all you know. This is just a personal credo I live by, so lest anyone thinks I am personally "requiring" them to live by my standards, lighten up already.

73 and nicely browned turkeys to you all,

Jackie

I agree. I misstated the part about the Japanese manufacturing.
Now that you mention it, I don't recall seeing Japanese stuff
until the mid- to late-70's.

To my mind, the 60's were the era of single-PC-board SSB
transceiver, a la Heathkit HW-101 - implemented with vacuum-
tube technology, but using those really nifty, no-alignment-
required, 9 MHz Xtal filters.

I'm waiting to see the first SS cop radio system. Or SS on
the MURS channels (:-o) Or any application for SS besides
cordless telephones on 915 MHz and 2.4 GHz and military
stuff. (ps: trunked systems don't count.)

>
> SO WHAT...?!?! EVERY sport, past time, hobby, etc has it's own "lingo"
>and traditions.
These codewords are not technical lingo. They are very stylistic. Also, these codewords are not an individualistic thing - its is representative of how Hams speak.

For example, saying Q abbreviations when ordinary conversation will do. Also, ending conversations with "73". Radios are called "rigs". Amateurs are called "Hams". Also the types of conversation - hatred of CB, debating on what's "real" Ham Radio, etc are part of the "Ham Radio" culture.

At first, I did not understand this stuff. Then, when I understood it, I realized people could just use regular words to say the same thing.

That's what makes these codewords different than any hobby's terminology.

Codewords might be fine with me if they were interesting to me. Also, a cult is not necessarily bad as long as it's not a boring cult. I felt Ham Radio was a boring cult. The codewords did not catch my interest. I guess it was the end goal of the hobby that made the codewords along the way uninteresting.

I hope I clarified and did not confuse (or upset) on what I meant by codewords.

>>Most Hams are male...(SNIP)
>
> Are you looking for love in all the wrong places?
No, I did not join Amateur Radio for this purpose.

> And lastly, WHAT is your callsign?
You know I'm not "uniformed" based on my postings. I have been to several meetings and Hamfests. I do gain some benefit from it. I don't know know what telling you my callsign will prove. I DO have a technician class license and this should be enough for you. I don't have to advertise or prove I have a license anyway. I don't know why you are so insistent about it.

2/3 questions.

One can ponder about how Ham Radio could best suited

- without really considering it a question of emotional or social
behavior. Boy would that be wrong. Ham Radio could live and die on very
strange human,
emotional, and social interactions. Technical merit takes a back seat in
any story of acceptance.

Look at something like the only code life-cycle. It
was at least as much a social story as a technical one. The no-code
technical mix attracted a certain kind of early adopter, and that adopter
in turn defined the culture (with some culture-hacking by code advocates). The
culture, ultimately, could not adequately support the hobby.

By the way, I have learned another realtime encoding scheme (other than Morse
code), one which I find enjoyable. Morse code is not enjoyable or useful to me
and it would better serve me and Amateur Radio to maintain my technical skills.

V.S. ,Technician class Amateur Radio license, KB1XXX

No offense taken, JJ, but my point was that I don't give a ripe rat's rear HOW hard the tests were back in Ought-6; I wasn't there to know or care about how "hard" the old tests were. I studied for and worked with what the powers-that-be are giving out now. If those who hate the current test pools are mad at anyone, it should NOT be us new hams. Anyone who says that new hams are "less than" what they are or are the equivalent of CB plussers need a clue enema administered... stat.

>They
> should go back a few more years when the questions were essay type
> and one had to draw schematics of circuits and explain in detail
> how they worked.

While a few schematics were on the Tech exam, I personally tried to understand all the unlabeled (and therefore not on the test) parts of the test schematics-- because I really wanted to KNOW what made an FM receiver work, albeit on a basic level. We've all gotta start someplace. And I figured that even if I wasn't asked a question about a certain schematic on the test, I could find out about it later. Which is what I'm doing now.

>Most of those who seem to think they took the
> 'real exams' actually themselves took 'dumbed down' test and
> couldn't pass the earlier ones if their lives depended upon it.

I wouldn't know and didn't have to know because the VE's aren't giving the old tests anymore... those who pine nostalgically for the "good old days" of tough tests need to wake up, because those same tests aren't being offered anymore. If some oldtimers automatically assume the newbies are inferior because of this, then they are either posturing because they can on the relatively anonymous venue of Usenet (but would never do so "on the air") or they're just bored and need to spout. Either way, get over it and let's get on with discussing the future of the hobby, wherever that may lie...

You seem to have something against "Ham Radio" culture vshah, which makes me wonder two things:

1- why you bothered to get into the hobby in the first place; or

2- why you bother to stay in it, if so many aspects of it bother you.

How would you like to see ham radio change? So far I've heard a lot of complaints coming from you, but outside of the Code thing, I've not heard any real concrete suggestions on how YOU would improve the hobby. Can I hear some of them that don't have to do with CW?

If you want to know what something means or why someone uses it, I figure it's prudent and most productive if you simply ask. If you don't care to use Q abbreviations when you're talking on the air, no one says you have to. All hobbies have their lingo, which is not necessarily meant to keep outsiders out, but rather it's used to keep insiders informed. No exclusion is meant by the use of lingo, at least ideally it should not be.

Allow me a couple of corollaries here: amateur astronomers need to know amateur astronomy equipment terms like Messier objects, the Herschel 400, Maksutov and Ritchie-Chretien Cassegrains, Ronchi grids, peak-to-valley determinations, apochromats v. achromats, not to mention a host of scientific astronomy terms. When you are a numismatist (coin collector) you will learn terms that few outside of the hobby know, such as off-strike, planchet, chop-marks, bourse, 2 by 2's, and of course all the grading terms that go with how to evaluate a coin. Or, if you don't ever plan to sell your coins and don't care about their resale value, you might not use much esoteric numismatic lingo. That hobby, like many others, consists of what the individual hobbyist places on it and little more.

When hobbyists of any ilk talk to one another, they use terms that fellow hobbyists often use and assume that those we're talking to either know what we are talking about, or if they are new to the hobby, that they will ask. No one comes into any hobby knowing much 'hobby talk' beforehand. It's an acquired thing. I don't see why you are so averse to this sort of thing.

Actually, Japanese rigs did not begin to dominate the market until well into the seventies. The mid-sixties rigs by Drake, Swan, Hallicrafters, National, WRL and Collins (not in order of popularity) were the kings of the hill.

Yup.

>The two I have in mind are
>the development of planar bipolar transistors and, most
>important, encapsulated, precision, IF sideband crystal
>filters. The latter allowed cheap, reproducible SSB
>transceivers to be manufactured (in Japan) and to become
>the dominant HF ham rig by the mid-60's.

I disagree. Japanese-made ham HF SSB transceivers did not show up in the USA in sizable numbers until the early 1970s. The first models were tube-based (Henry Tempo One, which is actually a Yeasu FT-200, Kenwood TS-511S, and a matched receiver-transmitter pair from a company called Star).

Widespread use of SSB by US hams began around 1948, when W6QYT and others produced practical how-to-do-it articles on building both phasing and filter exciters. Byt the mid-1950s there were many manufacturers producing SSB gear for hams - but as separate transmitters and receivers.

The Great Leap Forward was sparked by the introduction of the Cosmophone 35 plus the Collins KWM-1 and KWM-2 SSB transceivers in the late 1950s. While these rigs were too expensive for most hams, the concept of an integrated "shack in a box" was introduced by them. By the early 1960s, other companies were producing SSB transceivers at much lower prices. The two big things about

transceiving were that it eliminated the problem of zeroing the transmitter, and it made dual use of the most expensive parts of an SSB receiver or transmitter, thus lowering the cost.

In this same time period, Collins produced the "S-line" - matching transmitter-receiver pairs that could transceive or operate as separates, as desired. And again, by the early 1960s other companies were in that game.

What really drove the change to SSB was the price. A 100 watt SSB rig is at least as effective (S/N ratio-wise) as a 500 watt (or more) AM rig with all the supermodulation and compression tricks. Once the SSB rig cost less, the die was cast.
>
>It's true that SSB principles were well-known in the 30's,
>and some advanced hams had SSB rigs on the air back then.
>But, to tell the truth, they couldn't be deployed en masse
>until some very humble, and very small, components came
>into common practice.
>
I disagree again! It's possible to build a pretty good HF SSB rig using only components and techniques available in the very early 1950s. But it took some time for the idea that transceiving was worth doing to catch on.

Here's one way the "very early 1950s SSB transceiver" could be done:

First, use the heterodyne scheme of the S-line, witha tunable first IF in the 2.5 MHz region and a 455 kHz second IF.
Next, use a crystal lattice filter made with FT-241A-type crystals.
Use the miniature tubes that were available at the time (lots of them) and the ubiquitous 6146.

To simplify band-changing, plug-in coils might be used. But a ham with adequate tools and skills could build a bandswitching one.

The earliest description of an amateur HF transceiver that uses the same variable oscillator for both transmitter and receiver frequency control is in a QST of about 1953 or 54. Oddly enough, it's a 40 meter CW rig!

Jackie, JJ seems intent on getting most of this bassackwards, repeatedly. The main complaint hasn't been (at least by me) of the material covered by the tests, it's the fact that one can easily do a concentrated memory load on the question pools and pass any of the tests without learning much of anything meaningful about the subject matter. As one of the early VE's who started and ran a team for the first eight years after the VE testing was started, I saw the full spectrum of applicants, the good, the bad and the indifferent. But the licenses they each got all said the same thing. Some learned some radio theory in preparation for the tests, some did not. It didn't matter, they all got the paper that said "Amateur Radio Operator". You'd be surprised at how many DID take a very short time to fill out the answer sheet and then turn it in with a blank sheet of paper that was supposed to have been used for calculations. Bruce ULX isn't so far out in left field at all with his claim fo 8 minutes.

Since you're actually making the necessary effort to learn something about the subject matter you're being tested on -dang, and the code too!, I can't imagine why anyone could or would see any reason to criticise you for it. I've said clearly here a number of times that newcomers have no control over the tests any more than anyone has at any time in the past. You do what's required when you do it. But strangely, most of the newcomers who want to learn the written material also seem to want to learn the code, and upgrade. That alone says a few things about those who don't.

My big beef here is with the turkeys who've hung on the fringes for a lifetime of grousing about the requirements which apparently has become so ingrained within them that they can't stop. Only the actuarial tables will take care of that and them.
Even at that, I could ignore them if only they'd drop the silly idea that somehow it's all the fault of us oldtimers who just did what was asked of us, as though we had some control over the fact that a code test has always been a part of ham radio license testing! Kinda like blaming you for the tests being "easier" now, isn't it?

Yeah, Larry Roll has said, a few times, that none of you newcomers will ever have the same sort of license we got. It just isn't possible, you simply will never have the opportunity to take the same tests we took. Of course I agree. But what can that matter to you? Or me? If you get an Extra class license just as soon as you learn 5wpm code, and why in the world shouldn't you, why should I object? Given the same circumstances I would do the same thing, of course. I hope you will make something of it that far too many today will not. It isn't you or any one like you that is to blame for the way things have gone. I'm sorry I can't say the same for the FCC or the ARRL. FCC has decided to make it far easier for anyone to get any ham radio license, however mild their level of interest.. And today the ARRL has near-zero influence at the FCC, so they couldn't head it off if they wanted to.

What that does to ham radio in the long term is anybody's guess. It isn't even "getting the numbers up" as was widely and confidently predicted by eager advocates of dropping code testing.

I suppose that is one of the downsides of having such tests, where the answers to the questions in the pool can be memorized. If that possibility's there, some people will use it. I bought the Tech study book and being the thrifty person I am, I figured that since I spent the money for it, I wanted to get something out of it, even though I knew all along that I could look up the answers to the questions in the back. That's not learning though; that's rote memorization, yet some people have an amazing capacity to fool themselves into thinking that the two are equivalent. I could spend a long, long time going on about learning vs. rote memorization and how it relates to education in general-- it is a sore spot for me though, and not very pertinent to this topic, so I won't.

I have briefly looked over the material for the Extra test, and I will admit that most of the electronic theory whizzed far above my head. But I'm not an EE either, so I would not naturally be expected to know this sort of material as a matter of course. I would have to study hard for that test because I don't do electronics for a living.

We could say it matters, or pretend like it does, but it can't in the grand scheme of things. It may certainly matter to those who wish to continue to hold a grudge, but that's not doing the hobby any favors, for sure.

It's not the fact of this "old-test / new test" situation that concerns me, but rather the potential of a bad attitude and knee-jerk predjudice against the neophytes that could come riding along on its back. Having been born when a person was born, deciding to get into the hobby when they did when the tests were what they were-- none of that is either here or there. However, if one gets discriminatory as a result of having gotten their license when they did, and they feel as if this "seniority" means that they can treat newcomers to the hobby as if they were pariahs until they could prove their worth, I don't think that's right and it would tend to make people stay away from the hobby, which would be truly detrimental to its future, as I see it. I have heard of the "no kids, no lids, higher license class only" types who're better off being set away amongst their own, as far as I am concerned. Must be nice to be perfect, huh??

I'm not pointing fingers at anyone here, because I've seen this type of stuff in other hobbies too. No use living in the past-- people nowadays, no matter when they took their tests or what age they are, should consider that times change, standards change, and then learn to judge people on how well they conduct themselves where it counts-- on the air.

> FCC has decided to make it
> far easier for anyone to get any ham radio license, however mild their

So far I've heard all sorts of statistics bandied about on how amateur radio has either gained or lost members over the years, but I'm not sure what's accurate. If there really has been a decreasing number of amateurs in the ARS pool over the years, I would like to find out ALL the various reasons why that number has gone down. I'm not certain that it has as much to do with what people are being tested on as much as it might have to do with other things that are distracting people away from what may be perceived to be an "old-timey" hobby that cannot compete with modern high-tech pasttimes (I would say that this might have something to do with the fact that the ARS severely lacks well-aimed PR, but that's for another thread).

> What that does to ham radio in the long term is anybody's guess. It
isn't even
> "getting the numbers up" as was widely and confidently predicted by eager

If my hunch is correct, then dropping code entirely as an HF requirement might get the numbers up either; maybe nothing will... I fear that the ARS

has too much competition in other areas nowadays in areas having nothing to do with radio...

Yeah, it's what I wanted, but the hunger for it has passed by. I still
listen a lot, since I can do something else while doing it. If I have
the cash to buy an HF rig, I won't buy it, I will buy a new PC,or upgrade
one instead. Maybe that will change someday, who knows...

Dave, K8MN, replied:

> Actually, Japanese rigs did not begin to dominate the market until well
> into the seventies. The mid-sixties rigs by Drake, Swan, Hallicrafters,
> National, WRL and Collins (not in order of popularity) were the kings of
> the hill.

Yeah, I have to confess that my "historical research"
consisted of shuffling through my personal memories of
30 to 40 years ago - a process fraught with vagueness
and inaccuracies. I currently have the somewhat foggy
impression of being in a "Mom and Pop" ham store off
the North end of the Boeing Field runway in Seattle
and (a) overhearing a good deal of grouching about the
newly instituted incentive licensing, (b) seeing a Yaesu
transmitter/receiver pair for the first time and (c)
buying an old Viking Valiant for $50. I make the year
to be 1972. Then it fades out.....

And, I definitely misstated that mid-60's, Japanese thing.
But I'll stick with my assertion about pre-packaged 9 MHz
crystal filters being one of the enabling technologies
for low-cost SSB transceivers.

I foolishly misstated:

>>The latter allowed cheap, reproducible SSB
>>transceivers to be manufactured (in Japan) and to become
>>the dominant HF ham rig by the mid-60's.

Which was immediately corrected by Jim, N2EY:

> I disagree. Japanese-made ham HF SSB transceivers did not
> show up in the USA in sizable numbers until the early 1970s.
> The first models were tube-based (Henry Tempo One, which is
> actually a Yeasu FT-200, Kenwood TS-511S, and a matched
> receiver-transmitter pair from a company called Star).

That's what I get for basing "historical research" on
personal memories! You're right, the Japanese invasion
took place in the 70's (and not just in ham gear, either).

K7JEB:
>> It's true that SSB principles were well-known in the 30's,
>> and some advanced hams had SSB rigs on the air back then.
>> But, to tell the truth, they couldn't be deployed en masse
>> until some very humble, and very small, components came
>> into common practice.

N2EY:
> I disagree again! It's possible to build a pretty good HF
> SSB rig using only components and techniques available in
> the very early 1950s. But it took some time for the idea
> that transceiving was worth doing to catch on.

It's a matter of degree and price/performance. My recollection
was that there were a series of breakthroughs that drove
prices of SSB gear down and performance up. The Central
Electronics 20A phasing exciter was one such - in the mid-50's.
You cited the KWM-2 and I agree. I was also struck by the
cost-effectiveness of the Swan single-banders, and later
the Heathkit HW-101.

In every case, though, I still assert that it was the enabling
technologies in materials, components, packaging and design
methodologies that were in constant ferment in the general
electronics community that provided the breakthroughs in
amateur radio. Very few were actually motivated by amateur-radio
requirements alone. I think amateur radio lost its position
as a prime mover in technological development when radio
broadcasting did - sometime around 1950.

Yet, incentive licensing was a desperate attempt to flog
that dead horse back into life, to try to push amateur radio
back into a race where the other entries had already lapped
the field a couple of times - fueled by the headlong rush
of consumer electronics. As Bill Sohl implied, it was a policy
decision rooted more in the 1930's than the 1960's, and
as such, doomed to failure. Unfortunately, it also doomed
amateur radio to artificial license-class distinctions for
the next three-plus decades.

>> SO WHAT...?!?! EVERY sport, past time, hobby, etc has it's own "lingo"
>>and traditions.

>These codewords are not technical lingo. They are very stylistic. Also, these
>codewords are not an individualistic thing - its is representative of how
>Hams
>speak.

You absolutely IGNORED the base question, Anonymous One...That is WHY should Amateur radio be ANY DIFFERENT from any one of thousands of other sport, hobbies or past times?

>That's what makes these codewords different than any hobby's terminology.

No they don't. There are literaly thousands of terms (I provided several examples in the original post of other sports) that COULD be represented with "other" language, but they are not.

Again...WHY IS AMATEUR RADIO ANY DIFFERENT?

Furthermore, EVERY sport/hobby/past time has it's own traditions, goals and milestones. You have not rendered ONE valid reason why Amateur Radio should be ANY different.

>>>Most Hams are male...(SNIP)
>>
>> Are you looking for love in all the wrong places?

>No, I did not join Amateur Radio for this purpose.

You must be, Anonymous One. You mention it at every opportunity. In reexamining some of your posts, I count no fewer than 19 occassions where you make reference to the preponderence of male participants over female. Obviously it IS an issue for you.

>> And lastly, WHAT is your callsign?

>You know I'm not "uniformed" based on my postings.

That wasn't the question, now was it?

>I have been to several meetings and Hamfests.

Ohhhh...exxxxccccuuuuussssseeeee me. "Several" meetings...Uh huh...I see. What a wealth of experience to draw from.....

>I don't know know what
>telling you my callsign will prove. I DO have a technician class license and
>this should be enough for you.

The fact is that I do NOT believe you. I DO believe you to be untruthful, and your anonymous status is to protect your ability to troll at will.

>I don't have to advertise or prove I have a license anyway.

Then why present to an Amateur Radio related newsgroup if you aren't proud enough of your achivement or man enough to stand behind your opinions...?!?!

>I don't know why you are so insistent about it.

Because I do not believe you to be truthful. Furthermore, your posts are often written from third-person experience and from that of a very poorly prepared neophyte.

>2/3 questions.

Only 66 2/3% answered...Not enough to pass. Try again.

By the way, Anonymous Troll, my Amateur Radio callsign is K4YZ, not kyyz.

KYYZ is the callsign of an FM radio station in Great Falls, MT, owned by a corporation in San Diego, CA.

Do try to get it right.

I hate to do this, BUT...

Collins S-line used 455 kHz mechanical filters. Also the SBE-33/34 hybrid transceivers and the ahead-of-their-time Cosmophone 35 and 1000

National NCX-3, 200 and I think the NCX-5 used 5.2 MHz packaged xtal filters

Heath HW-100/101, SB-100/101/102, SB-300/301/303, SB-400/401 and SB-110 all used 3.395 MHz packaged xtal filters (tunable first IF 8.395-8.895MHz). An HW-101 has at least three PC boards, plus a modular VFO, and the final amplifier is point-to-point wired, btw. The Heath monobanders (HW-12/22/32) used a single-board design. They cost around $100 as new kits, without power supply. They used a different hetrodyne scheme, and xtal filters made from discrete components.

Swan 350,500,700,260 and all their variations used 5.5 MHz packaged xtal filters

Hallicrafters transceivers (SR-150, SR-400, SR-2000) used packaged filters at 1650 kHz (tunable first IF of 6-6.5 MHz)

The infamous Eico 753 (seven-drifty-three) used a 5.2 MHz xtal filter that was not packaged in a small can.

9 MHz packaged xtal filters were used in the Drake TR-3,-4 and -6. Also the Hallicrafters HT-46/SX-146 pair.

All of the above are circa-'60s vintage, and used American made filters.

Most (but not all) Ten Tec transceivers use 9 MHz filters. But they are ladder filters, not lattice filters, and they are not prepackaged in little metal cans.

The filters you recall are probably the McCoy units that were sold to homebrewers in the '60s. KVG (a German outfit!) also had a line of 9 MHz filters showing up in the USA in the late 1960s, also aimed at homebrewers. International Crystal also sold prebuilt preadjusted filters that were not in little cans.

The earliest mention of packaged HF-range crystal filters I can find in amateur literature are units by Hycon Eastern. They were featured in a 1957 QST article by W1DX ("What's Wrong With Our Present Receivers?") which described the advantages of putting the selectivity knothole as close to the antenna as possible, and of using HF-range xtal filters to reduce the number of conversions. These were 2215 kHz units - the first IF of the then-popular National NC-300 and NC-303 receivers. I have a pair of these filters (one CW, one SSB) with data sheets. 1959 price: $44 each. Inflation-adjust that to 2002 dollars.....

--

While we're on the subject of 9 MHz filters:

There's an urban legend about why hams use LSB on 75 but USB on 20. The UL sez that it's because many early SSB rigs used 9 MHz filters/sb generators and 5-5.5 MHz VFOs. Supposedly the sideband selection works out that way automatically.

But the UL is wrong. While the 9 MHz sb generation/5-5.5 MHz VFO scheme was very popular, it does not produce sideband inversion.

Generate a 9 MHz USB signal, additively mix it with a 5 MHz VFO and the result is 14 MHz USB. Generate a 9 MHz USB signal, subtractively mix it with a 5 MHz VFO and the result is 4 MHz USB.

However, if you use a filter in the 5 MHz range and a VFO in the 9 MHz range to cover 75 and 20, sideband inversion does occur as described.

EXACTLY! And it is that attitude which is the most important thing.

> For example, one of the changes I made in operation after someone politely
> mentioned it to me is the phrase "For ID." I had started to use that after
> listening in long before actual transmission, and thought at first that was
> how it was done. And this method was coming from "old timers" not newbies
> too. I DO NOT use that anymore though......

Perfect example!

I don't know how the "For ID" thing got started. The only place I hear
it is on VHF/UHF repeaters.

As I understand it, some folks use it to indicate that they are saying
their callsign but NOT turning it over to someone else. Yet it should
be obvious from the conversation whether the transmission is ending or
not. Also, it's good practice to let the squelch tail drop after every
repeater transmission, so the timer resets. End result: No reason at
all to say "For ID" on a repeater.

A very minor thing, of course. But minor things add up to major ones.

Insistant? If you want to post anonymously, go ahead. The only problem is that people are not goping to respect your opinions very much. You'll notice that most people here post by their names. Even those who use "handles" put their names in their posts, so we know who they are, or we can look it up from a callsign.

Have the courage of your convictions.

I didn't pay much attention to the JA or Heath gear between maybe 1960 and 1975 when I ducked out of ham radio completely for many years except for a rare foray into one of the local 2m machines. I jumped back in at a modest level in 1996 and I'm still catching up in many respects.

Typical retread experience: I was visiting an old ham buddy maybe 1992 or so and tuning 20 with his whizzy big ricebox. Heard a guy sign AC4?? and let out a whoop and dove for the paddles. "What are you all excited about?" asketh my buddy. "He's an AC4, that's Tibet!" He just rolled his eyes upward and patted me on the head. "No, no, he's in South Carolina ya silly, man you got a *lotta* catching up to do . . ! " Groan . .

In the '60-'75 timeframe the name of the game for serious dxing & dx contesting was Collins and Drake or fuhgeddit. There was a point in that timeframe when I seriously considered a Kenwood Twins rig but they didn't prove to be even remotely competitive vs. Collins & Drake and Heath was a giggle except in the cases of their amps.

I had a Drake 4 line separates rig and a "souped up" 75A4 which was a pretty typical station for my game. The big guns had stacks of $-Lines. The only exception to the "Collins & Drake rule" I remember was the Signal One CX seies which in the end proved to be pretty much a dud too especially for the money, it's front end just didn't hack it.

Solid state rcvrs couldn't match the performance of the hollow state types for serious HF work until close to 1980 from what I can determine. Which correlates with your comment on the timeline.

I think many would agree that the 1980 +/- Kenwood TS-940 was the Japanese breakthrough rig which finally broke the backs of both hollow state ham technology and the U.S. ham gear manufacturers. I have one of those, it really cooks and makes anything Collins ever built look really bad in comparison in a number of respects. When it's working. The thing is turning into a maintenance hog in it's old age and it's gotta go. With the rate of cost-effective development and release of new Japanse rigs today any of 'em over five years old gets to qualify as boat anchors.

> but using those really nifty, no-alignment-
> required, 9 MHz Xtal filters.

I never had to worry abt the filters in my HT-37, it wuz a PHASER . . !

>
> > ..... Two of my single-digit

> the MURS channels (:-o) Or any application for SS besides
> cordless telephones on 915 MHz and 2.4 GHz and military
> stuff. (ps: trunked systems don't count.)

Cell phones run SS. SS also has some very useful applications in the field of short-range industrial control & data handling. One of the regular lurkers in this NG has used SS for this purpose.

There are a gazillion comms "technologies" out there today which don't have any noticeable market in ham radio, SS is only one. Trunking never happened either. Despite all the BS about both we've seen in this NG over the years.

This is where I have a big problem with the farcial defense of dumbing down the hobby to "attract new blood which will take ham radio into the new millenium" via "new modes", etc. Horsepucky. They've had since 1991 to make a single move in any such direction. But then what the hell, they keep the high bands busy with thier 1920's FM technology Japanese HTs.

w3rv

2323. How Many Hams?

Newsgroup: rec.radio.amateur.policy
Date: 2002-11-27 17:14:50 UTC
From: N2EY@AOL.COM
Message-ID: <c2356669.0211270914.a06e831@posting.google.com>
Source record: 56460

There seems to be some confusion as to whether ham radio in the US is growing, both in absolute terms and in reference to the US population. I posted the following some time back, but some here may have missed it.

From 1930 to the present:

1930: US population 122 million, US hams 18,000, 1 ham per 6778 Americans

1940: US population 131 million, US hams 50,000, 1 ham per 2620 Americans

1950: US population 150 million, US hams 90,000, 1 ham per 1667 Americans

1960: US population 179 million, US hams 230,000, 1 ham per 779 Americans

1970: US population 223 million, US hams 270,000, 1 ham per 825 Americans

1980: US population 227 million, US hams 350,000, 1 ham per 649 Americans

1990: US population 249 million US hams 550,000, 1 ham per 453 Americans

2000: US population 281 million, US hams 683,000, 1 ham per 411 Americans

Even using these approximate numbers, it's clear that the trend has been
steadily upwards in terms of population, with the exception of the 1960s, when
the US population boomed but the US ham population virtually stagnated. Most of
the reasons for that low growth had little to do with ham radio itself (Vietnam, civil rights, baby boom, women's lib, etc).

Of course if one looks over shorter time scales there are all sorts of peaks and valleys. For example, the present US population is projected to be 288 million, and the current US ham population is slightly more than 685,000. Which works out to 1 ham per 420 Americans, right now. That's a slight decline since the restructuring of April, 2000.

>fashion, but I believe you are correct.

Some in here still believe that ARRL "can do no wrong." :-)

ARRL is an organization involved in both profit-making and
non-profit-making activities...although their corporate status
is classified as "non-profit-making." What many don't stop to
think about is that they have an infrastructure to support...
payroll monies for all paid staffers, upkeep on W1AW and the
museum and the work places/offices for staff, not to mention
the legal fee billing and lobbying services in DC. ARRL must
keep that up to remain solvent and "in business" (so to speak).

One way to keep solvent is to advertise both products and
services so as to convince 3/4 of all licensees to join as well
as to keep the 1/4 or so current members on board. That
advertising is just another form of advertising everywhere else,
the usual emotionally-loaded phrases aimed at separating
monies from wallets. Now that isn't to say it is "bad," just
that advertising is advertising, no matter what is being "sold."

Where things go wrong in individuals' thinking is that it isn't
"advertising" but it is "sincere, well-meaning, and altruistic."
ARRL is "run" by a very small group of people, most of them
engaged in amateur radio for quite some time (ages are at
and above fortysomething) and - seemingly - having favorite
activities, likes, dislikes within the entirety of amateur radio.

One way to see the above is the preponderance of news, articles, and opinions for operation below 30 MHz and a sometimes almost near-neglect for amateur activity above 30 MHz. That in the face of about one-third of all US amateur licensees allowed to transmit above 30 MHz. ARRL's own demographics show that group to be a minority in membership even though - as a class - they are in the US majority. That's contradictory to what they boast about appealing to "all" amateurs.

> Also true. Unfortunately, (many) Hams are probably not the best people
>to get involved in public relations. For better or worse, many of us are
>techno-nerds, immersed in the technical aspects of the hobby, and not in
>the social graces. I myself have been guilty of this. This would
>hopefully be a job that the ARRL would perform. But this makes a loop
>with your other point regarding the ARRL - they can but don't.

I don't believe that "hams are mainly (as in 'many') techno-nerds." It would seem, on first inspection, that they are just personally involved with the essentially-solo radio activity of communicating. Observation (at a discrete distance) of most radio amateurs has them (mostly) alone at their radios, listening for most of the time, then communicating outward to the "band." Unless they are in voice mode there is little normal speech going on in a typical amateur station "shack." When not communicating they can be observed reading about amateur radio or working on the bench, neither activity conducive to practicing in-person communication with those not directly involved with radio.

To gain effectiveness in education and promotion of radio to non-radio-activity humans, they must present themselves to others in terms that others can understand, NOT by a baseline of what they personally prefer or consider "best, strongest, whatever."

Too many fall back on themselves in trying to promote something as in "do it this way, because that is 'fun!'" It may be fun for the individual amateur but their particular "fun" is not automatically a model of what everyone else likes or thinks interesting. All human beans differ and trying to grind them into some homogenous blend the same as the amateur bean sometimes leaves a sour taste.

In the larger world of radio, HF (and even LF) SSB for pre-
WW2 times was little more than an RF extension of Type
C Carrier having four voice circuits in frequency-diversity
multiplexing. Hardly anyone in the larger radio world
bothered to think of SSB technique on single-channel
(single voice) radio links at that time. SSB grew first in
landline wired long-distance communications.

That changed after WW2 where wartime survival efforts
were not mired into the conditioned thinking of voice
communications by radio limited only to AM DSB. One
of the "conditioned thinking" items was the constant

repetition in earlier amateur radio of "Class C (finals) always having the best efficiency." Seemingly, Class B or even AB was shunned as "not being best, most efficient." That for amateur applications where the electrical input to RF output ratio meant very little in the way of "efficient" (low-cost) power consumption. Class C amplifiers were simpler to tune, simpler to operate than Class B types and their brute-force plate supply modulation by an audio power amplifier was easier to understand.

What is most interesting from a technical standpoint is that total electric power efficiency of a Class C PA modulated by a high power (half the power of the RF PA) is LESS than a low-level AM modulation transmitter using Class B or AB power amplifiers! The commercial and military users of HF SSB (four voice channels) already knew that to be true but somehow that experience didn't trickle down to single-voice-channel radio designers. :-)

Note: The post-WW2 Western Electric SSB transmitter designed around 1947-1948 had Class A amplifiers up to the final which was Class AB! 4 KW PEP, 12 KHz BW 4 voice channel "carrier" equipment (FDM) external.

The US military provided the impetus for single-voice SSB in that it provided lighter, more-efficient (for tube structures in airborne applications) communications. The major problem there was stability of rapidly-variable frequency, less emphasis on IF filtering although that was important. There were two savings on frequency stability that resulted from greatly-increased quartz crystal production during WW2 and "artificial" crystal growth techniques started then and finished after WW2...and more emphasis on linear-frequency-tuning variable oscillators with considerable stability over a wide temperature range. The "Collins PTO" design is one such landmark innovation, which, when coupled with mixing of switched quartz crystal oscillator output, enabled tuning nearly all of HF with exceptional stabiity and known (directly visible to the operator) frequency. All of that was obtained using tubes.

Collins Radio did an enormous aid to amateur radio by designing and selling several families of HF radio systems marketed first to the commercial market, then to the military (with more care on environmental factors). They could then provide those basic units slightly simplified for just amateur bands at "slightly less" cost (a relative figure since Collins commercial sell prices were way up there).

Collins' "mechanical" IF filters applied themselves well to single-voice-channel designs but they were NOT originally

intended for that purpose. Those magnetostrictive filters were intended for multi-channel FDM radio relay designs but just didn't find a big enough market niche compared to other designs.

Narrow-bandwidth crystal filters were made possible by two things in the post-WW2 times: Increased raw quartz supplies, mostly from grown crystals rather than smaller, natural quartz having only a 20% or so yield; development of better basic filter theory needing fewer resonators ("modern filter theory" as opposed to older "constant-k" and "m-derived" formulae developed for L-C filters). Those both happened just before 1955, still in the vacuum tube era.

I certainly agree that solid-state devices and off-shore production did drop both sizes and prices of amateur HF radios by the end of the 1950s...but those old boatanchor tube radios established the architectural planform that remains today. On the other hand, on-shore companies can be competitive such as the SGC-2020, designed and built in Belleview, WA, not a boatanchor but certainly used by a lot of private boat owners as well as radio amateurs.

"Near-neglect"? As is often the case, your opinion turns out to be in direct conflict with the facts. Examining the "news, articles, and opinions" from the two most recent issues of QST which happened to be on my desk, I find no evidence of such "near-neglect" for 30MHz and above.

In the Nov issue feature articles include the "N0GSG DSP Radio Direction Finder" for 144/420Mhz bands, "The Journey to EME on 24 GHz", and "Hams and the Rodeo-Chediski Fire" describing public service contributions primarily on 2M and 70cm. New Products reviewed include a new Alinco DJ-296T 222MHz transceiver. "Departments" include "The World Above 50MHz", "Microwaves", and "VHF/UHF Century Club Awards". (Note that "DXCC Awards", an HF centric department, was long ago removed from QST!).

In the Dec issue feature articles include "The Cu Loop Antenna for 2 Meters", "Linked Repeater Systems", and "OSCAR 40 on 24 GHz". New product reviews cover the Yaesu F-8900R (50, 144, and 430MHz bands), and the RadioShack HTX-420 (144 and 430MHz bands), and the aforementioned UHF/VHF "Departments".

Advertising for "above 30MHz" products in the magazine is pervasive, including the coveted "cover 2, cover 3, and cover 4" positions.

"Near-neglect" indeed! Another Anderson opinion discredited as baseless and unfounded in the facts.

And even in industry where some equipment is VERRRY expensive,
the field repair is nothing more than a plug-in (circuit board) replacement
where the faulty board is then sent to a central repair depot for
computer diagnosis and then specific component replacement/repair.

> >Anyway, just some thoughts.

Nor did many others. Who would have forcast the amount
of transistors we could stuff into an IC chip today?

> And what it really comes down to is this: If ham radio is confined to
those who
> have lots of technical focus and ability, it will be a very small service.

Agree too. And even when you go back to the "early" days of
ham radio, not every ham was the local super tech. Many hams

were quite content to be outstanding operators.

> How many hams would there be, and what technology would we be using, if there
> were no more code tests - but all of us had to homebrew all our equipment?

I'd be gone tomorrow. I have NO desire to homebrew a reciever or transmitter. My TS-690 fits neatly on a small shelf on my home office desk and I couldn't come close to homebrewing the full range of capabilities, functionality and frequency coverage that the rig provides me.

Cheers,
Bill K2UNK

Jackie, hang in there with your own viewpoints, don't let all these
resident BAWAs grind you down. :-)

The BAWAs will not rest at those with opinions contrary to theirs
and their anger at such sacrilegious thoughts is mighty.

>I've always thought that more knowledge is better than less when it comes to
>most any subject. I'd rather *know* more and use what I do know less. There

>know. This is just a personal credo I live by, so lest anyone thinks I am
>personally "requiring" them to live by my standards, lighten up already.

BAWAs are essentially control freaks. You MUST do as they
say you should lest you become a victim to a remarkable amount
of personal abuse of knowledge, morals, ethics, religion, parents,
sexuality "charges" all having nothing to do with a particular subject.
They have only one world view...theirs. QED Google. :-)

I got started in HF communications in early 1953, evolved into
civilian life into electronic design responsibility by 1961 and have
made a career in radio electronics. Other than turning an RF
carrier on and off manually for test and alignment purposes, I've
never had occasion to use on-off keying morse codings or even
be required to use it for communications...yet I've used and
designed-in many more modes and modulations in radios than
are allowed in amateur radio anywhere. I don't see any purpose
of a government agency requiring morse code tests for any
amateur radio license...and the FCC agrees with that, has
agreed so since 1990...thousands of others around the world are
of the same opinion, most of them licensed in amateur radio.

All that is irrelevant to the BAWAs. :-)

Encrypted police radios in public safety radio service is being
tried out even as everyone writes...but that doesn't have to be
any spread spectrum mode. Or does it? :-)

For civilian commercial applications of Direct Sequence Spread
Spectrum, look at WLANs (in the millions of units), the home
networking wireless link units.

There might be some experimentation in FHSS when the AN/PRC-119 and other SINCGARS family radios get phased out and go on the surplus market. ITT designed the first version of SINCGARS, General Dynamics Land Division (now disolved) bult a half hundred thousand or so, then ITT came back designing the improved SINCGARS in half the size and built the rest. As of last year, 241 thousand total SINCGARS radios were built and 239 thousand fielded to the troops. It's an "old" design dating back to before the Gulf War, operational for almost 14 years now.

The FCC allocates "some" DSSS in US amateur radio but that is only permissible above 30 MHz and regulations state that *all* SS operations must be recorded and kept for inspection for a long time, a regulation made well before 9-11-01. The FCC also permitted a select few hams to "explore" a proposed 60m amateur band with OOK CW mode...as if HF characteristics were still a "mystery" and an "unknown" in the year 2000. :-)

>Are you really an engineer?

Kellie is a mechanical engineer. He knows enough electrical
theory to wire up his key to a transmitter, provided the
connection is outside the transmitter case. From there on to
a radio innards his knowledge seems limited to memorization
of manufactured radio equipment advertising literature.

There's an intermittent discussion going on in rec.radio.amateur.
homebrew under the subject thread of "Barnstorming Ideas for a
40 Meter Rig." Several good things have been raised there and
also slightly interrupted by Dan Tayloe plumping for his NorCal
30, featuring the Tayloe Mixer. Those who've read that thread
will also see that Roy Lewallen (EZNEC author) remarked about
the plumping of Tayloe. Hans Summers of the UK came on the
scene describing his 80m QRP rig and a combining of the
four-phase-switched multiplexer (heart of the Tayloe mixer) with
a Gingell polyphase network modified by Yoshida. Summers
has an excellent personal website describing his experiments
with numerous pictures and schematics and performance
measurements. I've added some comments from a technical
basis of the circuitry for discussion, not controversy, based on
analysis of the Gingell-Yoshida polyphase done in the same
way that I did on Peter Martinez' 1973 adaptation of the Gingell
network as published in Radio Communication in Pat Hawker's
column there. Hawker also published my analysis results in
RC in a 1974 column of "Technical Topics." Yoshida's
modification of the Gingell network results in an excellent
very low quadrature error over a wide audio bandwidth. [both
Gingell and Yoshida are licensed radio amateurs, Gingell
originally in the UK but now living in USA]

Kellie seems bent on doing some sort pseudo tuff-guy hollering based on past policy newsgroup disputes that didn't go in his favor. That has nothing to do with any technical topics regarding design in another newsgroup not involving policy..."policy" has not yet been mentioned there in regards to radio design.

Davie Heil also seems to want to start some contentiousness about design on his long-running demand that "interest in radio" MUST culminate with amateur radio licensing by a government or be considered "inapplicable" for discussion of any sort. :-)

The two mentioned above are shining examples of "BAWAs" where actual technological smarts gathered in work-experience-responsibility tasks are of far lesser importance than CW skill and the "accreditation" of an amateur radio license grant.

Thank you, Hans Brakob, for that illustration of BAWAs. :-)

But Shockley only perfected the transistor in the late 40s (49 I think)
and transistors at a reasonable (affordable) price only started showing
up in the late 50s.

Nor do I....but I could be wrong.
The biggest problem with solid state in that time frame
was the lack of power. 100 watts output called for tubes, not
transistors in the late 60s....at least for ham gear.

> > It's true that SSB principles were well-known in the 30's,

Yeah, those were the ones. OK on Heathkit using 3.3 MHz filters, too.
The homebrewers I knew in that era (I wasn't one) seemed to go ape
over those things, much more so than low-IF mechanicals or lattices.

> There's an urban legend about why hams use LSB on 75 but USB on 20.

> generators and 5-5.5 MHz VFOs. Supposedly the sideband selection works
> out that way automatically.

Another bit of ham-radio traditional wisdom smashed.
Oooohhh, well.

I think this devolved into using symmetrical filters,
two SSB gen freqs, 9 MHz and 9 MHz + 3 kHz, and two
pointers on the dial - one for LSB and one for USB on
whichever band had whatever inversion.

Now, about incentive licensing......

Not being a serious DXer or contester or field-day op,
I'm more than happy to take your word on this, Brian.
As owner of a couple of Kenwoodys myself (850's), I
was quick to note a couple of front-end attenuators
and a pre-amp bypass switch on the front panel. Never
saw "features" like that on vacuum-tube rigs. I wonder
why.

> Cell phones run SS. SS also has some very useful applications in the

Oh, man! How could I have forgotten about CDMA? Maybe
because I have a TDMA phone (that really sucked until
they got a lot more cell-sites infilled out here in
West Phoenix) and was just flying along on a roll. CDMA
is definitely spread-spectrum. That's a Happy Meal on
me next time you're in Phoenix, Brian.

I will concede that the "new-blood, techno-hip, exotic modes"
argument was run into the ground during the Great Code Wars
here on r.r.a.p. And V/UHF-FM with EchoLink and IRLP sure
isn't your daddy's (or your) Heathkit DX-35 novice rig. Just
like in the 60's, though, I have no idea where the hobby/avocation
is heading. I'll just be happy if it survives.

I must say that I am appalled at what I have heard in the last few weeks of this group, the condemnation of M3's and others makes my blood boil. The retired school teacher (allegedly) is the most self opiniated and pompous individual that I have ever had the mis fortune to listen to, his continual griping and nervous guffaws must make him the most loathed ham operator on hf. Let us all hope that he learns to moderate his self opiniated and racial views very soon.

Man! Jackie, you hit the proverbial nail on the head with that one--the
next to last sentance, that is. However, it's my best guess that new hams,
or hams licensed at a different point in time than ______ (fill in the blank
as needed, 'cause there's lots of them) are easier to target. It's also
real easy to turn on the computer, logon to the internet, call up the
newsgroup, and pontificate as needed. It's much too difficult to write the
actual agency that has all the power in the world to change what they don't
like.

The other thought that one must consider in light of the above: if the FCC
saw fit to change the process as they did, which "voice," exactly, were they
listening to? Seems the predominance is that CW is less of a testing issue
"these days" than it used to be and will become even less so as time goes
on.

You're a better person than I. I went to a class sponsored and taught by
two Extras and one General. We were in session once a week for, I think,
about 8 weeks. Then, we tested. The class was informative, to be sure, but
I couldn't tell you the first thing of the material now. I "got into" ham
radio to chat, although Emergency Communication was my passion for a while
(no longer, due to burn-out and politics). There is/was no need for me to
know the technical stuff as I only built one antenna (from a boiler-plate
recipe) and more enjoy just the good fun and chatting we do on 2M. When I
first became a ham, I was on 10M most of the time. Haven't even had HF on
for quite some time, though there is a net tonight I might try for.

You are becoming slightly more vociferous as the few weeks go by! :) Don't
let the frustration level here in this newsgroup get you. Eham.net, or even
QRZ are, sort of, fun. I mean, everyone's got an opinion, but the "fellas"
in here just can't handle the heat or the debate, and their searing will get
you to the point where I've gotten. I just don't care about "jerks" any
more. Like you said, "life is too short."

Yep, you got that right. I've seen that happen around here. Some nidiot will send me some searing email, but when I contact them on the air, they're all touchy-feely friendly. It's disgusting. If ya don't like me, don't pretend to. **BELIEVE ME** if I don't like you, I'll let ya know. ;)

Speaking of like, it sure is refreshing to have a YL in here. You're, so far, much lighter sided than I am, but I like what you've got to say!

>

What does it say, Dick? Why don't you let us know what you *think* it says? What is the problem with someone who gets the piece of paper and then is just plain happy to stay wherever it is they wish to stay in ham radio? You may not realize it, but by separating out and distinguishing those who "learn the written material" and "also seem to want to learn the code, and upgrade," you reveal what your true feelings are: you think anyone who chooses not to learn code and upgrade as some kind of inferior person to you.

Now, if that's not what you think, please be sure to not just send your ad nauseum attacks, but please clarify your position.

>
> Yeah, Larry Roll has said, a few times, that none of you newcomers will

> never have the opportunity to take the same tests we took. Of course I
agree.
>

Of course you do, and it's bunk, Dick. The ham radio you tested for has progressed into newer, different and ever changing technologies--some I am certain you would not understand because none of us can understand everything of ham radio.

I agree that the tests you took are not the same tests we took. However--we are equal a ham to you in every way, license grade to license grade. Different tests do make lesser or greater hams, Dick, whether that matches to your way of thinking or not.

> But what can that matter to you? Or me? If you get an Extra class license just

>

Dick, it's called change. Some call it progress, and I reserve judgement on change being progress. The times change and so will ham radio. Ham radio in 20-30 years will certainly even look different than what I see today. But, I say bring it on.

> What that does to ham radio in the long term is anybody's guess. It isn't even
> "getting the numbers up" as was widely and confidently predicted by eager
> advocates of dropping code testing.
>
> Dick
>
>

I wasn't paying attention enough to hear anyone promise increased numbers if CW testing was changed. However, anyone who thinks ham radio numbers would "go up" by any appreciable size in this day and time is--in my opinion--off their rocker. There's just too much technology out there to have an increase in ham radio. The internet--the very medium you even seem to be more fond of using than ham radio--supercedes almost any other avocation or passion, I would guess.

Hi Jackie, what do you know about the code exam? Serious question.
Don't read anything into it.

Thanks, Brian

: for a long time, a regulation made well before 9-11-01.

Again, Anderson is waaaaaaaayyyyyyyy behind the times in regard to Amateur Radio regulations, and the facts will spoil his troll.

The regulation in question (97.311) was revised well before 9-11-01, and most of the restrictions which Anderson rails about were removed.

The statement that "*all* SS operations must be recorded and kept for inspection" is not true and was not true even before the current revision. Such recording and retention is not/was not required for any station unless SPECIFICALLY determined necessary for a particular station by the FCC District Director -- no such "determination" is currently be in force.

With all kind wishes,

de Hans, K0HB

>pointers on the dial - one for LSB and one for USB on
>whichever band had whatever inversion.

For an example of "forward-backward" tuning, go on back to
the Collins 51 series. The R-388/URR was a military version
of the 51J3 receiver. Drum dial with all bands, plus circular
dial with two different scales. :-)

A 9 MHz modulated signal difference mix with 5.0 to 5.5
MHz VFO tunes 4.0 to 3.5 MHz. An additive mix tunes
14.0 to 14.5 MHz. "Forward-backward." :-)

Sideband orientation is "normal" with one mix, "reversed"
with the other. Those could be made the same with a
modification of the double-mixing used in conventional RIT
sub-blocks of today.

I don't think anyone here believe's the ARRL "can do no wrong", but there's a diffrence between "do no wrong" and being dishonest. People make mistakes. There ARE such things as "honest" mistakes. I for one believe the ARRL's recent "Diamond Club", etc, is well-meant but wrong. It's NOT "dishonest.

We still have yet to see your "evidence" of League "dishonesty".

It ain't a troll if it's true, Len. You snipped all the rest of Hans'
post which very accurately delineated the numerous "over 30mHz" articles and
other ads.

Some would call that "misdirection". Others "obfuscation".

You've been doing well lately...don't ruin it.

And there's ONE person in this forum who should know all that well.

He spent a "career" in radio electronics, so overly impressed with
himself and his work to the point of believing that he has amassed all the
"qualifications" as a "professional" that he is now too good to take the same
Amateur Radio licensing exam that truck drivers, Senators, Astronauts and
housewives have taken.

He does, however, "know what's best" for us since he's spent amost a
decade in this forum or one's like it telling us how to "do it".

>I don't see any purpose

> All that is irrelevant to the BAWAs

Obviously it IS relevent. That's why we're here. That's why most of us
in this forum have agreed in one form of principle or another that it's gone,
and that we will move on. Unfortunately one of those who HASN'T moved on is
unlicensed and unexpereinced in Amatuer Radio practice.

That's the technical evolution I was alluding
to. In the end, it provided the precision-,
and cost-effective-, filtering for the SSB era
in amateur radio.

> plate supply modulation by an audio power
> amplifier was easier to understand.

Awww, come on, Len. Give us hams a break!
You're forgetting one little detail about
amateur radio regulations up until rather

recently: The transmitter power limitation was
in plate-power *input*. A linear amplifier in
AM operation running a kilowatt input, the legal
limit, would put out, maybe, 250 watts. In
plate-modulated, class-C operation, that was more
like 800 watts. And, while power cost wasn't
really an issue, final tube costs certainly were.
Hams were renown for pushing cheap, small tubes to
Herculean power levels using every trick they
could. Plate modulation was a given in this
case.

The linear-amplifier-efficiency issue actually
surfaced first in 1920's - 30's broadcasting when
Western Electric fielded a whole line of non-Doherty,
linear-amplifier transmitters that sucked up
primary power big-time. Small-station managers
rebelled and RCA got a major sales boost with
their "high-efficiency" plate-modulated rigs.
So it was kinda gospel by the end of WWII.

> I certainly agree that solid-state devices and
> off-shore production did drop both sizes and
> prices of amateur HF radios by the end of the
> 1950s...but those old boatanchor tube radios
> established the architectural planform that

I dunno, Len. It's a little hard to see the
architectual similarities between my old
Johnson Valiant and an Icom IC-756PROII.
For starters, I can't seem to find the spectrum
display knob on the Valiant. ;-)

The kinship is a little closer to see with
the "Gold Dust Twins", the Collins KWS-1 and
75A4.

>
>I think this devolved into using symmetrical filters,
>two SSB gen freqs, 9 MHz and 9 MHz + 3 kHz, and two
>pointers on the dial - one for LSB and one for USB on
>whichever band had whatever inversion.

Nope. Doesn't work that way, either.

Let's do the math. Remember, on SSB rigs the dial freq is usually the
suppressed carrier frequency, not the middle of the actual signal.

Filter-type USB generator with the suppressed carrier exactly on 9000 kHz.
Filter bandpass is approximately 9000.3 to 9002.7 kHz. (audio freqs of 300 to
2700 Hz).

Mix this USB signal additively with a VFO of exactly 5100 kHz and you get USB
on 14100 kHz (suppressed carrier freq).

Mix this USB signal subtractively with a VFO of exactly 5100 kHz and you get USB on 3900 kHz (suppressed carrier freq). Right frequency, wrong sideband.

One way to get LSB with this setup is to use a second filter with bandpass of 8997.3 to 8999.7 kHz (audio freqs of 300 to 2700 Hz). Since the suppressed carrier freq. and VFO freqs. don't change when you change filters, mixing this LSB signal subtractively with a 5100 kHz VFO will give you LSB on 3900 kHz. The Drake TR-3 and TR-4 did exactly this.

But filters are expensive, so another mehod can be used. Use the original filter with bandpass of 9000.3 to 9002.7 kHz, but put the carrier at 9003 kHz instead of 9000 kHz. Result is LSB with audio freqs of 300 to 2700 Hz and suppressed carrier freq of 9003 kHz.

Mix this LSB signal subtractively with a VFO of exactly 5100 kHz and you get LSB on 3903 kHz (suppressed carrier freq). Right sideband but the freq is 3 kHz off.

Some rigs simply used two dial lines. Others (Heath, Collins) built a small frequency shift circuit into the VFO that shifted its frequency exactly 3 kHz, so the same dial line could be used on both sidebands. Digital readouts can be set up to avoid the problem entirely. One form of "digital dial" simply counts each of the rig's oscillators in succession, adding or subtracting as necessary. The resultant count is the suppressed carrier frequency, by definition. The Kenwood DG-5 readout for the TS-520S is an example fo this technique.

>Now, about incentive licensing......
>
A good idea badly implemented.

>
>I would expect things like civil rights, baby boom, and women's lib to
>INCREASE hobby participation, not depress it.

Maybe, but that's not how it worked out.

In the 1960s, ham radio was considered a very "square", "establishment" activity, to use the jargon of the day. You didn't see a lot of longhair hippie Woodstock types in QST, at hamfests, etc. The close association of ham radio with conservative politics and business, MARS, Armed Forces Day and technology in general confirmed that charaterization for many young people. Not cool, man. In an era when most new hams were teenagers, this was a recipe for decreased growth. Civil rights and women's lib were/are movements against the "establishment", and ham radio was seen by many as part of that establishment.

A baby boom produces lots of babies and swells the population right away. But it takes some years before those babies are old enough to be getting ham licenses in significant numbers.

There were other influences, too. To name just one: In 1963, the FCC opened more exam points and increased the distance requirement for a Conditional from 75 to 175 miles "air line". All of a sudden there were very few places in the USA that qualified as "Conditional country".

>Now if you wanted to depress
>participation, you could come up with some DAIOTC like incentive
>licensing.... that would do it!

You might think so, but you'd be mistaken. Sorry.

The first wave of IL changes were enacted in late 1968 and the second wave in late 1969. So for most of the decade of the '60s, IL was a potentiality, not a reality. Growth actually sputtered to a halt in 1963, five years before IL became effective, and coincident with the Conditional change and other effects.

Incentive licensing was at its height in the 1970s - when there were no code waivers, no CSCEs, and most hams had to journey to the FCC office to test.

Economic times were awful, two energy crises, Watergate, Vietnam's end, etc. Yet the number of US hams soared!

If IL was such a bummer, man, why did US hamdom grow so much faster after it was enacted?

Yup. 1000 watts DC plate power input to the final stage. Oddly enough, FCC did not interpret the 500 watts of audio from a plate modulator to be "DC plate power"!

>A linear amplifier in
>AM operation running a kilowatt input, the legal
>limit, would put out, maybe, 250 watts.

Theoretical maximum is 350 watts. Same applies to screen or grid modulation.

>In
>plate-modulated, class-C operation, that was more
>like 800 watts. And, while power cost wasn't
>really an issue, final tube costs certainly were.
>Hams were renown for pushing cheap, small tubes to
>Herculean power levels using every trick they
>could. Plate modulation was a given in this
>case.

This was true even if hams didn't push the tubes beyond ratings.

Here's a practical example: Compute the cost of a plate-modulated AM rig using a pair of Class-C 812As modulated by a pair of Class B 811As. Then compute the cost of a linear amplifier capable of the same power output. Include the cost of power supply in both cases, and the cost of a modulated driver in the case of the linear amplifier. Guess what: Plate modulation wins on a watts-per-dollar basis.

Or consider what a Viking Valiant would have cost and weighed if it had not used plate modulation, but had to deliver the same power output on AM.

Because a typical ham rig is used perhaps a few hours per day, and is typically receiving more than half that time, electric power cost is but a small part of the economic equation. Equipment first-cost is a BIG part, though.

Note that all of the above has been pointed out before by me.

>The linear-amplifier-efficiency issue actually

>rebelled and RCA got a major sales boost with
>their "high-efficiency" plate-modulated rigs.
>So it was kinda gospel by the end of WWII.

Let's take a look at some popular WW2 military transmitters, shall we?

BC-191/375 - plate modulated
AN/ART-13 - plate modulated
BC-610 - plate modulated
BC-611 - plate modulated
AN/ARC-5\SCR-274N - Screen modulated with BC-456 modulator, plate modulated with MD-7

>most of the restrictions which Anderson rails about were removed.

97.311 was revised as indicated in FR 51571, Sept.29, 1999

However, 97.311 (c) (3) still requires "Maintain a record,
convertible to the original information (voice, text, image, etc.)
of all spread spectrum communications transmitted."

Is anything close to that for any other allocated mode in US
amateur radio? I don't thnk so. There is still the doubt (in the
FCC or the ARRL who lobbied for the change?) that US
amatuers are the true blue legal-upholding boy-scouts that so
many PCTAs plump themselves. 97.311 (a) still warns: "SS
emission transmissions must not be used fof the purpose of
obscuring the meaning of any communication." That's
redundant since the same is said earlier in Part 97 about ALL
communications. Why repeat?

Does the FCC have a "District Director?" That looks like an
ARRL title. We might even get Phil Kane (or perhaps Phil
Karn) to remark on that. The FCC has Commissioners and
Field Offices (still) plus all the Bureau and Office honchos
in DC.

Part 97.311 (e) of the 1 October 1995 regulations was as
follows: "Station records must document all SS emission
transmissions and must be retained fora period of 1 year
following the last entry. The station records must include
sufficient information contained therein, to demodulate
all transmissions. The station records mustcontain at
least the following:"

<five items, sub-parts (1) through (5) omitted for brevity>

97.311 (f) of 1 October 1995 read: "When deemed necessary
by the EIC to secure compliance with this part, a station
licensee must:"

<three items, sub-parts (1) through (3) omitted for brevity>

>The statement that "*all* SS operations must be recorded and kept for
>inspection" is not true and was not true even before the current revision.
>Such recording and retention is not/was not required for any station unless
>SPECIFICALLY determined necessary for a particular station by the FCC
>District Director -- no such "determination" is currently be in force.

Under the older regulations, keeping everything sufficient to
"demodulate all SS transmissions" for a year was rather drastic.
No other mode was so restricted in records keeping in US
amateur radio. Almost draconian. There has been little change
besides the DS polynomial generation kinds specified. The newer
regulations don't require a year's worth of everything...they don't
specify how long once the "District Director" has "deemed it
necessary to produce records."

Of course, spread spectrum modes are not what the BAWA
honchos want since they only consider "real hams" as those
who "work DX on HF with CW." They just refer to the mode
with tired scatological cliches and could care less...and
obviously know little about it.

I only know that it's given at about 5 WPM and in the form of a QSO, and once you listen to it you are asked certain questions about what was sent, also something about 1 minute of solid copy is in there. I don't know exactly; I'm just going by what I've heard from others on this.

The FCC has full database files for free download on its website.
A problem there is that they consolidated all the smaller regional
files into multi-megabyte whoppers that need high-speed cable
access ISPs for practical download. The various data fields are
all explained and search-and-totalize programs can be written to
work with the basic ASCII downloadable data.

As to "real numbers" now, it seems to be a case of "my numbers
source can beat up your numbers source!" :-)

>with MD-7

Look all you want...:-) How about the AN/GRC-19 and its T-195?
Wowee, also plate modulated, a vehicular radio set running off
24-28 VDC drawing 44 Amps during transmit! Circa 1954.
Roughly 25,000 were built. The transmitter was capable of
tuning itself, both for the PA plate circuit and the whip antenna.
As far as I've seen it's the first use of the "Bruene Discriminator"
to implement the Collins Autotune feature fully.

By "popular" above you mean "popular in surplus markets."
The SCR-300 or BC-1000 is also "popular" and was FM with
VFO and portable. The UK adopted that after WW2 as did
several other Yurp nations. Do you want some "popular"
vehicle radio transmitters? Lots of those and almost all are
FM...which implies Class C PA biasing.

If time stood still and the vacuum tube was still King, there
might be a "point" in there somewhere. Time didn't stand
still and chassis punches are rusting all over the country.
Please try living in this millenium instead of the previous one.

I agree with you. :-)

Phasing methods didn't have the popularity of filter-type
SSB modulation or demodulation. Few really understood
phasing SSB from the late 1950s onward. By the time
Mike Gingell did his polyphase network PhD dissertation,
computers (!) were able to analyze it. Yoshida carried it
even further for a truly wideband quadrature network with
good amplitude flatness and awesome low-error relative
phase quadrature performance.

I've not forgetten nor do I "give breaks." :-)
[been there, done that with both AM and SSB early-on]

I'll put it simply: Most US radio amateurs circa 1950 to
1965 just didn't understand SSB versus AM despite
enough articles in ham periodicals. When I've had to
explain theory to them (forty- to fiftysomethings then,
myself not yet 30) with much drawing of diagrams and
vectors and keeping a controlled voice level for lengthy
periods, it demonstrated quite a bit. These were guys
IN electronics work back in the tube era. :-)

"Advancement" came about through cheaper, higher-
performance off-shore designed and manufactured rigs
of that time so that they could successfully operate on
SSB. The venerated WW2 makers either quit the ham
market a couple decades after WW2 or they just
dissolved. SGC was a bit late among the SSB
transceiver designers starting well after WW2 but the
SGC-2020 is a designed-and-made in Washington
product.

>The linear-amplifier-efficiency issue actually

Heh, heh, heh, you got a point there! :-)

By "architecture" I meant the block diagram
kind of structure. A major change happened
first with multiple-loop PLLs, then DDS and
fractional-N synthesizers replacing the manual
variable tuning. Another plateau change
happened when DSP started being applied to
internal bandpass filtering.

>The kinship is a little closer to see with

Like that means anything. ARNewsline had a story on indian code-talkers almost two weeks ago, but they couldn't get that correct either. They said it was the Cherokees during WWII, while everyone else knows that it was the Navajo, a completely separate and distinct tribe. That's not the first time that ARN got things wrong. Don't forget that ITF pays himself a salary for writing these reports - how else could it cost $1,000.00/month, while the competing service in NY does it for $100.00/month?

>and the FCC itself seems to have remained silent on its own web pages.

However, the FCC would be the authoriative source. Once a week, they do zip up the entire amateur database for download. Why don't you download it (it's only about 58Mb compressed) and count the records yourself? Don't forget to exclude all the expired licenses within the grace period which are still in the database.

ftp://ftp.fcc.gov/pub/Bureaus/Wireless/Databases/uls

It may be in a subdirectory from there. The daily updates are in a subdirectory of the above URL called "./daily". Somewhere, there is also an HTTP interface to download the files too.

>exactly; I'm just going by what I've heard from others on this.
>
Here's the format:

The test consists of a typical ham QSO, sent at 5 wpm. Lasts 5 minutes, which at 5 wpm works out to about 125 characters. Pencil and paper are provided for copy.

There are two ways to pass the exam:

1) Ten fill-in-the-blank questions are asked about the QSO, and you need to answer 7 of the 10 correctly to pass. A typical question might be "what is the callsign of the station sending the code?"

2) Copying (writing down) 25 or more consecutive characters correctly results in a passing grade, independent of the 10 questions. You can go back and correct your copy, fill in letters you missed, or even rewrite what was copied to make it more legible, after the code stops but before you hand in the papers.

The standard code test uses a tone close to 750 Hz. The 5 wpm is sent with "Farnsworth" spacing with character speed of about 13 wpm. See note below about Farnsworth spacing. Other tones, non-Farnsworth spacing, typewriters for copy, flashing lights and other accomodations are available upon advance request.

All of the VEs I have encountered want people to pass the test, and try to make the tests as fair and accomodating as the rules allow.

5 wpm is one character every 2.4 seconds.

--

A few words about Farnsworth spacing:

One of the problems with learning Morse at slow speeds is the tendency for many people to hear the code charaters as individual sounds rather than units of sound. Example: "H" is thought of as "four dits" rather than a single sound. Counting dits and dahs works up to about 8-10 wpm for most people, but then becomes a habit that must be unlearned. Solution: Send the characters fast enough that counting is impossible, but space the characters out to the low speed. This also gives you more time to write, because the spaces between charaters are exaggerated.

Example:

"Regular" Morse, as it sounds at 5 wpm:

daaaaaaah diiiit diiiit diiiit daaaaaaah daaaaaaah
daaaaaaah

"Farnsworth" Morse at 5 wpm:

dah dit dit dit dah dah dah

Most code tapes, code learning software (like the G4FON stuff), and code practice stations use Farnsworth spacing below about 12 wpm because it makes the code easier to learn and easier to copy, as well as avoiding habits that must be unlearned.

We don't teach babies to talk by speaking to them verrrryyy slowwwwly. A child hears "cat" as a single sound unit, not as the joining of three sounds. But we do limit the vocabulary and exaggerate the spaces between words. Same principle for learning foreign languages - and Morse code.

When a license number is quoted, you need to know what the total consists of. Does it include club and other group licenses? Does it include all FCC ham licenses, or only those in the 50 states? Does it include expired licenses that are in the grace period, or only current, active licenses? How about RACES licenses, which FCC seems to be phasing out?

A very useful source is:

http://www.arrl.org/fcc/stats.html

which lists licenses held by individuals in the US and possessions/territories. They are broken down by state/posession and license class, and are derived directly from FCC data. Updated every day or so, and the date is given. Only downside is that only current data are shown.

The thread "ARS License Numbers" includes bimonthly updates based on these numbers. The current total is about 685,000

>That leaves AH0A, who calculates that the average age of a ham license
>is less than 60 months (currently about 57), and that's a critical
>figure for licenses which are renewable every ten years. It means
>that the total number must eventually decline, no matter what the
>short term fluctuations may be.

How does the average age correlate to anything related to growth or decline in totals?

The license term is 120 months. The midpoint is 60 months. Renewals can only be done in the last 3 months before expiration, unless you let the license expire. So a "young" database could be caused by lots of new licenses.

But in fact the "average age" is affected by many factors. The number of new licenses, and expirations/cancellations, rises and falls dramatically (see AH0A data on "new licenses" and "expired licenses" for some examples). An upgrade or address change does not generate a renewal unless the license is within 3 months of expiring, but a vanity call generates a renewal regardless of the license term. Vanity call rules changes in 1994 generated a surge of vanity calls, skewing the renewal dates. The 2000 restructuring generated a surge of upgrades, many of whom got vanity calls.

What's most important is the long-term picture rather than short-term variations, but that requires data keeping over long periods. With the demise of the Callbook, that job got harder.

Also, license totals themselves are not really the issue. What matters is the number of active hams on the air, and what they do with their license privileges.

Welp, it obviously didn't and Incentive Licensing happened at the end
of that era. I tend to agree with Jim but that discussion falls into
the armpit of philosophical and sociolological "issues". Which I'm too
old and grumpy to screw around with.

Now if you wanted to depress
> participation, you could come up with some DAIOTC like incentive
> licensing.... that would do it!

I don't think anybody around here who is realistic and has any real
time in the saddle is advocating another Incentive Licensing
"upgrading" maneuver. Incentive Licensing was a well-intentioned (your
mileage clearly varies) experiment which pissed off some and worked
for others. In the long run it's impact on the future (today) of ham
radio has proven to be zilch based on the continued steady growth of
the hobby after 1968.

So then along comes "Reverse Incentive Licensing" a quarter century
later a la 1991 reinforced by the more recent Maneuver of The April
Past which hasn't done boo-diddly squat to jack up the Sacred Numbers
despite the wailings of it's proponents to the contrary.

Diddling the exams in the recent timeframe hasn't accomplished a
damned thing one way or the other any more than Incentive Licensing

had any long-term impact. The nocodes have goosed up the traffic on the machines the way I see it and I don't see any significance in that.

Ham radio isn't "going away" or "going down the pipe", it's fine, hams will still be beeping and yakking their buns off 25 years from now just like they were doing 25, 50 and almost 100 years ago. The big change will be better equipment. As usual.

Lotta mindless hand-wringing bullshit and minutia-hammering underway around here.

Len Anderson:
> I agree with you. :-)

> Phasing methods didn't have the popularity of
> filter-type SSB modulation or demodulation.

True, but there was a span of time in the
mid-fifties when most hams on SSB used it
for transmitting.

It came in the form of the Central Electronics
20A exciter that did the SSB generation at
9 MHz and then mixed it up or down to all
the then-authorized amateur bands. It worked
surprisingly well, but did require periodic
adjustment of its two 'balance' controls.

I think the clincher for filter-type exciters
over phasing was the emergence of SSB transceivers
that used the filters for receive selectivity as
well as in transmitting. Plus, mobile operation
with a phasing-type rig would have been
"difficult".

> Few really understood phasing SSB from the
> late 1950s onward. By the time Mike Gingell
> did his polyphase network PhD dissertation,
> computers (!) were able to analyze it.
> Yoshida carried it even further for a truly
> wideband quadrature network with good
> amplitude flatness and awesome low-error
> relative phase quadrature performance.

The mathematical underpinnings of the process
itself are fairly straightforward - it's getting
that damned audio phase-shift network to span
the 10 octaves of "real audio" that's the pill.
The B & W network popular in the fifties barely
made it over the range of the male voice, 300 -
3000 Hz. But that was enough to get on the

air with a readable signal.

K7JEB:
>> Awww, come on, Len. Give us hams a break!

> IN electronics work back in the tube era. :-)

My experience was that some did understand it and some didn't. It took me a while to get all the implications way back then, too, and I was "in the field". I didn't chase through the math behind the phasing method until I got to college.

This process happens every time there is an advance in technology and paradigms shift. It takes some time for most people to acclimatize. I take some small comfort in the fact that, when I have found myself is the situation you describe - being a technology evangelist - everything I say to someone is, at some level, remembered by them and, perhaps much later, cross-correlated with other information sources to produce the desired understanding, insight, ...and salvation from dark ignorance.

I dunno. For me, 'digital tuning' has to have the programmable dividers and a phase-locked loop. Or a DDS. Or a bunch of NAND gates buried somewhere inside it.

Learing the different modes of communication should be fostered, encouraged, supported and appreciated. However, learning the mode and having a test requirement on a mode is two different things.

[snip]

>
> > That it is useful in emergencies is a ridiculous thing - if your

> talk to me, so whats the point?
>

Your response aside, the statement that CW is "useful in emergencies is a ridiculous thing" is ridiculous in itself. *Any* mode that proves useful in emergency communication is of great value to a particular situation. It is supporting CW to the exclusion of other modes as useful, that is ridiculous.

Non-support of CW--or any other mode--because it cannot be understood by the "general public" is a pretty weak position. If someone genuinely wants to know what is being transmitted, they will take the initiative to learn to decode the transmission. Ever use a decoder on HF frequencies such as news organizations, NWS, etc.? Wow, it's great fun. But, one must take the initiative to learn what is needed to get the information of those signals.

> >
> > Instead, with the increased ease with which signals are digitized,

> etc, etc programs also use DSP. Big deal...
>

No mode should be "required" knowledge. In my opinion, no mode test proves anything about technical capability, or anything else that would make someone a "more qualified" to be an amateur radio operator.

[snip]
> >
> > In fact, consider this: DSP should be required because, in case of
> > emergency, you hook up your PC/laptop audio board to the radio, and

> be stylish like you. Hummmm, you say you live many states away? Take 5
> days for the laptop to get to my accident scene via UPS? Oh well...
> I've still got my hand to keep me company in the meantime...
>

Well, like I said, my position is that to support *any* mode to the exclusion of others--in a testing environment--is a huge mistake. To wit, look at the way CW itself is defended as a testing mechanism these days; partly because of its having been used as an "entry" into the realm of amateur radio for all these years.

>
> > Code is what keeps me getting a ham licence.
>
> Why? Are you "gifted" or something?
>

If the statement was supposed to have been "cose is what keeps me *from* getting a ham license," that's pure-d-bullshit, to use a popular phrase. Like I stated above, if you're interested enough, you'll learn CW. However, I repeat my strong position that CW should not be maintained as a qualifier (test) for amateur radio licensing.

[snip]
> >
> > Oh and one more thing: I think it is incredibly funny that in a

> won't get a license. You will have to buy a new car with an automatic,
> and retake the test. Expensive way to get a drivers license if you ask
> me...
>

The observation is a good one. Have stiffer written exams with much, much more emphasis on proper operating procedures, FCC R&R, and safety--operationally as well as in electronics theory. I can guarantee you that those things alone would have kept me out of the hobby...I am not interested in learning *that* much about ham radio to get licensed. (And some think CW is a filter--heh heh).

> >
> > There, now flame me.
>

>
> Next.... MK

There everyone has it. The display of a very arrogant and unfriendly attitude--to the defense of a communication mode.

2396. FCC Rules For Hams Using Spread Spectrum

Newsgroup: rec.radio.amateur.policy
Date: 2002-11-28 15:29:20 UTC
From: n2ey@aol.com
Message-ID: <20021128102920.06308.00000689@mb-fm.aol.com>
Source record: 56586

Hams have been using spread spectrum since 1981, when an STA was first granted. The latest rules were enacted as part of the R&O for 97-12.

Here are the current rules for SS use by hams. Note that the old record-keeping requirements only apply to specific stations when deemed necessary by the FCC for interference elimination.

--

ï¿½97.311 SS emission types.
(a) SS emission transmissions by an amateur station are authorized only for communications between points within areas where the amateur service is regulated by the FCC and between an area where the amateur service is regulated by the FCC and an amateur station in another country that permits such communications. SS emission transmissions must not be used for the purpose of obscuring the meaning of any communication.

(b) A station transmitting SS emissions must not cause harmful interference to stations employing other authorized emissions, and must accept all interference caused by stations employing other authorized emissions.

(c) When deemed necessary by a District Director to assure compliance with this Part, a station licensee must:

(1) Cease SS emission transmissions;
(2) Restrict SS emission transmissions to the extent instructed; and

(3) Maintain a record, convertible to the original information (voice, text, image, etc.) of all spread spectrum communications transmitted.

(d) The transmitter power must not exceed 100 W under any circumstances. If more than 1 W is used, automatic transmitter control shall limit output power to that which is required for the communication. This shall be determined by the use of the ratio, measured at the receiver, of the received energy per user data bit (Eb) to the sum of the received power spectral densities of noise (N0) and co-channel interference (I0). Average transmitter power over 1 W shall be automatically adjusted to maintain an Eb/(N0 + I0) ratio of no more than 23 dB at the intended receiver.

--

Hope this clears up any confusion.

Want to know how superior FCC testing is? Set the way-back machine to 1982, location: The Detroit field office. The 20 WPM code test is being administered for prospective Extras. The testing tape sounds unusually slow to the examiner. She takes a set of headphones out to her supervisor and asks him if the code speed sounds slow. He agrees that it is not 20 WPM, although the label on the tape says otherwise. The supervisors solution? "Fuggehdaboutit!" That day, about 15 people received their Extra class license, and some, most likely, wouldn't have passed because of this snafu.

That's how superior FCC testing is compared to VE testing.

Thanks a lot, Jim. I wanted another opportunity to ask the question
in a different way. But even with only onecrack at it, its obvious
that she doesn't know there are two types of exams available, wouldn't
know which one to ask for. Just as I told you during the great
Morse/Farnsworth debate. Even your lengthy diatribe on why Farnsworth
is so much better, there's still no indication that she could make a
special request of the VE and get the exam that Part 97 specifies.

Standard? How can it be standard?

Ooops. I jumped the gun. Which is the standard test? Morse or
Farnsworth?

The 5 wpm is sent with
> "Farnsworth" spacing with character speed of about 13 wpm.

Ahem, 13 to 15WPM. Which is as much as 3X faster than 5WPM

See note below about
> Farnsworth spacing. Other tones, non-Farnsworth spacing, typewriters for copy,
> flashing lights and other accomodations are available upon advance request.
>
> All of the VEs I have encountered want people to pass the test, and try to make

The rules (as in regulations/Part 97) say MORSE, as in Morse Code.

> for learning foreign languages - and Morse code.

And we don't teach them to read by printing "MORSE" in Part 97 and pronouncing it "FARNSWORTH" at the VE session.

Now tell her she has a choice. If you can.

>regulated by the FCC and between an area where the amateur service is
>regulated
>by the FCC and an amateur station in another country that permits such
>communications. SS emission transmissions must not be used for the purpose of
>obscuring the meaning of any communication.

In shorter words, all the SS must be in the USA, controlled and
watched. The last sentence is redundant since the same words
are found for ALL US amateur transmissions.

>(b) A station transmitting SS emissions must not cause harmful interference to
>stations employing other authorized emissions, and must accept all
interference
>caused by stations employing other authorized emissions.

Again, redundant. Same thing applies to all modes by all amateurs,
stated earlier in Part 97.

>(c) When deemed necessary by a District Director to assure compliance with
this
>Part, a station licensee must:

Who is this "District Director?"

>(1) Cease SS emission transmissions;
>(2) Restrict SS emission transmissions to the extent instructed; and
>
>(3) Maintain a record, convertible to the original information (voice, text,
>image, etc.) of all spread spectrum communications transmitted.

No other US amateur mode is restricted to this draconian extent.

>(d) The transmitter power must not exceed 100 W under any circumstances. If
>more than 1 W is used, automatic transmitter control shall limit output power
>to that which is required for the communication. This shall be determined by
>the use of the ratio, measured at the receiver, of the received energy per
user
>data bit (Eb) to the sum of the received power spectral densities of noise
(N0)
>and co-channel interference (I0). Average transmitter power over 1 W shall be
>automatically adjusted to maintain an Eb/(N0 + I0) ratio of no more than 23 dB

>at the intended receiver.

In shorter words, restricted to QRP flea power. More enforcement
to local-only communications.

Worse yet, it restricts spread spectrum to just Direct Sequence type
with nothing applying to Frequency Hopping. Why?

>Hope this clears up any confusion.

All of the above quoting could have been done from the USGPO direct
or on the ARRL website...available to anyone.

Now show the history of US amateur radio spread spectrum since the
onset of Inventive Licensing plans. :-)

Where is this informative poll and its results? :-)

About half the US amateur bands (and 99% of the spectrum space) are above 30 MHz...line-of-sight radio paths. The USA has seven time zones signifying east-west spreading well beyond LOS paths.

There is no federal requirement mandating any allocated US amateur mode over others in the same bandspace. Why does it "matter" which mode "they" use?

...if one uses ham publication articles as a reference,
then that would be true. :-)

A problem with an absolute ("most hams on SSB") is
that such is a subjective determination, not objective.
Only those who took the time to write a manuscript,
shoot photos, draw diagrams got the attention of editors
of publications. In a very few cases, those editors who
"knew somebody" could do the pursuading for an MS.
The real value of the publishing coin was in trying to sell
a publication to earn money from advertisers to keep the
publication going. There's no guarantee that editors had
"the pulse of the readers and really knew what was going
on..." :-)

>It came in the form of the Central Electronics
>20A exciter that did the SSB generation at

>the then-authorized amateur bands. It worked
>surprisingly well, but did require periodic
>adjustment of its two 'balance' controls.

Some sort of balance control seemed necessary
even in higher-ranked radios. In my subjective
observation of the 60s this seemed true, including
Collins radios (in home and car of former boss Ed
Dodds, W6AFU, circa 1960 Woodland Hills, CA).

Tube-based radios had to cut corners in complexity
to be cost-competitive in the amateur market as
compared to commercial or military market. The
latter two didn't want equipment that needed so much
operating attention. Filter type mod-demod structures
were much more stable than (then) phasing types.

>I think the clincher for filter-type exciters
>over phasing was the emergence of SSB transceivers
>that used the filters for receive selectivity as
>well as in transmitting. Plus, mobile operation
>with a phasing-type rig would have been
>"difficult".

I'll agree there and add size to the equation. For
those who both drove and operated, on-frequency for
both Tx and Rx was easier and the shared-filter and
frequency-control sub-systems of transceivers fit that
bill very nicely. Filters could hold characteristics
solidly in the harsher mobile environments.

>> Few really understood phasing SSB from the

>3000 Hz. But that was enough to get on the
>air with a readable signal.

When all one has is a rock and a hammer, gravel
is a good product. :-)

The early packaged quadrature phase-shift networks
were then a plateau-leap above the conventional but
could not remain "wondrous" enough to survive the
next 45 years or so. The In-Phase and Quadrature
outputs (at high impedance) and double mixers lent
the modulator an air of mystique back then. That
mystique seems to have imprinted minds of some long-
timers long enough to be viable today (even when it
is outclassed by latter-day methods of phasing). The
filter method was straightforward and could be visualized
by those who knew that AM produced two sidebands so
eliminating one yielded SSB... :-)

>My experience was that some did understand it and
>some didn't. It took me a while to get all the
>implications way back then, too, and I was "in the

In my case I did the reverse, self-learning the higher
math to understand how those things worked, then
having to be careful of revealing what I already knew
in math classes lest the instructor accuse me of
some perfidy of "getting help" from students who had
completed courses...fat chance in night classes
after working all day, heh, not much time to get such
"inside info." :-)

>This process happens every time there is an advance

>sources to produce the desired understanding, insight,
>.....and salvation from dark ignorance.

Good points. Narrowing that to the amateur radio field,
consider that the activity (in the main) is about operating
using already-designed and manufactured radios. There's
the emotional loading of advertising-reviews-bragging tends
to color real understandings of what is behind the front
panel. Ads for technical things have always been "spec
sheet fights" among competitors. Some amateurs get into
heated arguments over inconsequential-to-their-use specs
because ads have featured some particular specification.

Take "phase noise" specifications on radios with DDS or
fractional-N synthesizer frequency control. Phase noise
specs are important to CDMA cell phone handsets and base
stations and don't much matter in amateur HF operation on
any mode there. There was hardly any mention of phase
noise in older PLL-based frequency control subsystem radios
yet phase noise was there. The thing is that very, very few
amateurs have the facilities to actually measure phase noise
so their only reference is ads and reviews. Sometimes it
comes down to "my specs can beat up your specs!" :-)

The boatanchor devotees have all made mental-emotional
attachments to tube radios, probably all back when they were
young and impressed by the state-of-the-art back then. I don't
say that as a negative, just that it is a nostalgic, emotional
condition common among humans. Nothing wrong with it
until it is used as an arguing point in its favor when comparing
it to today's technology. See "real radios" statements... :-)

The polyphase quadrature network used by Gingell (then a
UK ham) for his PhD thesis had a chance of being used in
commercial multiple-channel FDM systems. It appeared
in several IEEE Transactions on Communications issues

after 1973 and publication in RSGB's Radio Communication. Kevin Schmidt, W9CF, did a thorough analysis of the Gingell polyphase (with PC help) which appeared in QEX, April 1994 (copy available on Schmidt's personal website). Tetsuo Yoshida, JA1KO, took the analysis-synthesis even farther in his article in QEX, June 1995, yielding R and C values for a wideband flat-amplitude, very low quadrature phase error realizeable network. Hans Summers, a UK ham with an outstanding website (www.hanssummers.com) used those values for a direct-conversion receiver that also incorporated a Tayloe Mixer. Summers' site has the Yoshida article.

The Gingell polyphase network is one of those breakthrough ideas that is truly new, not just an "improvement" on something already around. Yoshida took it to what appears to be an ultimate in realizeable values. Dan Tayloe did almost as much in using a fast CMOS multiplexed switch IC as a mixer...which in theory acts the same as a diode mixer...a diode mixer is nothing but a one-way switch turned "on" and "off" by the local oscillator. The difference is that the multiplexer switch isn't bothered by conventional diode forward-conduction non-linearities and has excellent IP3 qualities, much better than even a conventional diode ring or bridge mixer. Hans Summers' DC receiver polyphase network has a phase quadrature relative error of ZERO (resolution to 0.01 degree) from 100 Hz to 10 KHz with audio voltage response at each output within +/- 1 db. Extending the audio range from 25 Hz to 35 KHz has relative phase quadrature error of less than 0.06 degrees and voltage response dropping 3 db at the ends. Summers' construction, admittedly non-optimum, including two quad op-amps and the dual multiplexer-switch mixer is about the bulk of the old B&W I/Q network housed in an octal-base metal tube shell.

The Tayloe Mixer and Gingell-Yoshida polyphase network together make a formidable direct-conversion HF receiver and would also make a "stereo" DSB detector (one sideband in each ear) in a conventional receiver...in the size of a small IF can with a 6AL5 dual diode tube...and do it with true high fidelity for AM or just for SSB with easily-selectable sideband.

>> ....The first TRUE "digital tuning" receiver

The R-390 series (390, 390A, 391, 392) all had five
numerical digits displayed, selected by two knobs.
Collins did it with just tubes, no ICs available in '54.
A "solid design" though, good for weight training. :-)

Like Bruce passing the Extra exam on a whim, without studying, without any lucky guessing, on a $250 bet from two CB-Plussers, scoring 100%, in only 8 minutes, I'm not inclined to believe that Kelly is a licensed engineer. Their manner and style of speech are more akin to that of a sanitation engineer than anything requiring a formal education.

If Kelly is truly an engineer, its high time he cleaned up his act and presented himself as one.

[snip]

I'm using the ARRL's 2 CD set, "Your Introduction to Morse Code", and I noticed in the back of the instruction booklet that came with the set that it appears the practices are geared towards sample QSO's of the sort that they give at the VE exams. My question is, are the CD's QSOs keyed out at the 5 WPM, so that you can get practice in writing down what you hear at the actual test speed? I can always work on speed later, but I want to be sure that when I'm through with studying via the CDs, that I'll be in good enough shape to pass the CW test.

FWIW, I'm also using the G4FON software which generates random characters via the Koch method. This has been very helpful as well. In fact, buying the ARRL CDs was probably superfluous, but since they were so highly recommended I figured it couldn't hurt to have both.

If you're referring to Len, then just say so. I honestly don't know
why Len riles you guys so much. If you did a little introspection,
you would realize that Len, as much as you would hate to admit it, is
right about long-timerism in amateur radio.

You want time to stand still. It won't. So we wait for the actuarial
tables to purge the bad - with the good. And that's not healthy.

Why don't you guys try a little forward thinking and advocate
something other than Morse Code all the damned time?

Good luck.

>
> Who is this "District Director?"

Are you being cute or just ignorant? The DD is what/who used to be
known as "Engineer in Charge" of an FCC Field Office - the title
changed about 5 years ago. See Section 0.314 of the Rules for the
authority delegated to a District Director.

>>(3) Maintain a record, convertible to the original information (voice, text,
>>image, etc.) of all spread spectrum communications transmitted.
>
> No other US amateur mode is restricted to this draconian extent.

If you will examine Sect. 97.103(c) you will see that the same
authority can be exercised at any amateur station - regardless of
modulation mode employed - "when deemed necessary by an EIC". They
missed changing the title when the Rules were last revised but the
authority still exists.

Prior to the Report and Order cited below, all stations using SS
were required to keep these records for all SS operations. Now it
is required only at FCC discretion, which is usually exercised
only when there is an interference situation or other suspected
violation of the Rules.

> In shorter words, restricted to QRP flea power. More enforcement
> to local-only communications.

Part of the "package".

> Worse yet, it restricts spread spectrum to just Direct Sequence type
> with nothing applying to Frequency Hopping. Why?

By Report and Order dated Sep. 3, 1999 this restriction was
removed, the mandatory record-keeping requirements were lifted,
and the "ALE" power reduction scheme for maximizing spectrum
availability was instituted.

(See FCC 97=234, WT Docket 97-12, 15 FCC Rcd 1481)

The original restrictions were the price of beling allowed to use
this particular type of modulation. The FCC is obigated to ensure
that the content of all ARS communications meet the statutory
"permitted" categories (whether they do it or not is another matter

that will not be kicked around here).

There were several of us within the agency who were familiar with the military origins and uses of SS and were dead set against allowing SS to be used because of the ease of obscuring the content and location of the transmissions. New mobile DF equipment make these restrictions unnecessary.

A. You never did, do not now, and never will have/had access to what you refer to as "military communications." You do not now, never will, and never did possess the requisite security clearance. You are slinging Bullshit again. What you were allowed to see was declassified ancient technology, if even that much.

B. The "toys" which the FCC uses to DF are totally ineffective against military communications technology, even against 20 year old technology. But further discussion will not be kicked around here about that.

C. Have a nice day! And stop slinging arrogant bullshit.

Ken

Hookay so now the legalities have been cleared up beyond further
discussion.

Now kindly refer back to the comment in the first line of yer post "Hams have been using spread spectrum since 1981". When/where did those comms take place in 1981? Callsigns? I'm under the impression that SS has never been implemented in the ham bands per previous posts I've made and I'm willing to eat crow and take my spankings if I've been wrong.

Not counting any bench experiments, spare me . . .

Why I did, Brain - until 1968 when Incentive Licensing came
along, whereupon I loaded myself up and drove the 260 one
way miles to the
Kansas City FCC district office. There, in couple hours
time,
I took the 13wpm code test, the General and Advanced
writtens, the 20wpm
code test and the Extra written, and came home with my Extra
ticket.
Your point, please?

You see, I had lost some spectrum and I wanted it back. So
instead of sitting on my duff carping about how mistreated I
was, I just did it.

> That's how superior FCC testing is compared to VE testing.

And I'm sure you were one of the 15 getting an Extra class license that day, and
this
is all a first hand story..... Right.

Amateur Radio Newsline™ Report 1319 – November 22, 2002

Amateur Radio Newsline report number 1319 with a release date of Friday, November 22, 2002 to follow in 5-4-3-2-1.

The following is a Q-S-T. Ohio's Governor praises hams for their November 10th tornado response and self enforcement really works. Find out what we mean on Amateur Radio Newsline report number 1319 coming your way right now.

(Billboard Cart Here)

**

RESCUE RADIO: HIGH PRAISE FOR TORNADO HAMS

Some high praise for Amateur Radio from some high ranking Ohio state officials. This following last weeks deadly tornado that hit the town of Van Wert. Bill Pasternak, WA6ITF, tells us how the accolades came about:

--
Ron Moorefield, W8ILC, is the West Central Ohio ARES District Emergency Coordinator and well known throughout the area for his work in emergency communications. And on Wednesday November 13th Moorefield says that he spent time in the Ohio Emergency Management Situation Room with Govenor Bob Taft and Ohio State E-M-A Director Dale Shipley.

Moorefield tells Amateur Radio Newsline that both men stated without any reservation that it was the volunteer efforts of the regions ham radio operators that really saved the community of Van Wert on November 10th. This, through their efforts in the Skywarn program and providing early warnings. W8ILC adds that both men had a high praise for all aspects of the Amateur Radio service.

For the Amateur Radio Newsline, I'm Bill Pasternak, WA6ITF
--

Hams across the Mid-West and into the South-Central and South East activated on November 10th. They were active in spotter and emergency nets before, during and after numerous killer tornadoes struck the region. As previously reported, this years SKYWARN recognition Day is Saturday, December 7th. (ARNewsline(tm))

**

INTERNATIONAL - SOLOMON ISLANDS: FIRST NATIVE HAMS GRADUATE

The remote Solomon Islands now has a native ham and C-B radio population of its own. This, as the first group of trainees graduate from a special licensing class. Jeramy Boot, G4NJH, has the rest of the story:

--
On the 25th of October, the Prime Minister of the Solomon Islands attended a special graduation ceremony at which he presented 21 students with certificates marking their successful completion of an amateur radio training course. The students were the first native-born Solomon Islanders to graduate from a unique school set up by Australian radio amateur Sam Voron to bring amateur radio to the people of the Solomons for the first time. All other Solomon Island licensees were ex-patriate amateurs.

At the ceremony, the deputy head of the Australian High Commission in the Solomons presented each student with a CB or amateur radio transceiver which had been donated by overseas amateurs and CB operators, while the Minister of Home Affairs gave each student an antenna.

School radio clubs might like foreign amateur radio operators visiting the Solomon Islands are welcome to stay at the school and help the students.

Jeramy Boot, G4NJH
--

Not mentioned in the story is that Sam Voron's call sign is VK2BVS. Also, school radio clubs worldwide might like to keep an eye on 28.490MHz. Thats where the Solomon Islands ham radio school has already many contacts. (GB2RS)
**
ADVANCED PROPAGATION: THE LEONID METEOR SHOWER REPORT

A possible new record for 222 MHz meteor scatter. Ron Marosco, K5LLL, in Mc Dade Texas reports over the VHF Reflector that Tom Haddon, K5VH, worked Peter Macgregor Shilton, VE3AX, during the Leonid meteor storm on Monday, November 18th. K5VH is located in Dipping Springs Texas while VE3AX is in Cayuga Ontario Canada. Ron estimates the distance between the two stations was in the order of 1300 miles.

As for himself, K5LLL says that he made only 16 QSO’s this year. He says that’s about a quarter the number made 12 months ago.

Out West, W6GYD says that he worked 14 stations on the rocks beginning at about 08:45 UTC and ending his operation at 12:01 UTC. Not bad when you consider that he was running only an Icom IC-756 bare foot to a 5 element Telrex beam at 13 meters elevation. (VHF Reflector)

**

SELF ENFORCEMENT: BEACON QRM'S SPACE – HAM TAKES IT OFF THE AIR

Now the story of a UHF beacon with a signal that was a bit to good. And as its owner explained on the VHF Reflector, a complaint came from an unexpected source. And. as Amateur Radio Newsline's Henry Feinberg, K2SSQ, tells us it had to do with the final frontier:

--
Within 48 hours of turning up his new 1296.300 Mhz beacon in Derry, New Hampshire, Ed Parsons K1TR, received a phone call and a signal report from the Chief Engineer at the Millstone Hill Observatory in Westford, MA. This would

turn out to be the first, last and only QSN report the beacon would receive.

The good news: the observatory hearing it loud and clear! The bad news: The observatory was hearing it loud and clear. So loud that the engineer told K1TR that the beacon's signal was impacting the observatory's capability to track satellites in certain directions. Also, that the recipient of the satellite tracking information, the US Air Force, would not be pleased.

It seem that the Air Force radar uses about 8 Mhz of spectrum centered at 1295 Mhz. They use an 80 foot dish for an antenna. The K1TR beacon was less than 30 miles line of sight from the observatory.

So the Ed's 23cm beacon is off the air while he finds a new home for it. Anyone with a good UHF site more than 50 miles from the town of Westford but still in New England, and who is willing to host the beacon, should contact K1TR by e-mail to esparsons@lucent.com

For the Amateur Radio Newsline, I'm Henry Feinberg, K2SSQ
--

K1TR says that a companion 33 cm beacon is still on the air. He says that signal reports are still appreciated for this one. (VHF Reflector)

Break 1

From the United States of America, we are the Amateur Radio Newsline, heard on bulletin stations around the world including the Southcoast Radio Amateur Network serving Los Angeles California.

(5 sec pause here)

**

ENFORCEMENT: FCC SAYS YES TO SCHOENBOHM

The FCC is granting the application of Herbert L. Schoenbohm for an Amateur Radio station license and a General class operators license.

According to the W5YI Report, the decision was adopted by Administrative Law Judge Arthur Steinberg on October 9th as a follow-on to a May 7th hearing to determine if the former ham possessed the requisite character qualifications to be a Commission licensee. If no objections were filed with the regulatory agency prior to November 9th, this initial decision becomes effective on November 29th.

Whether or not Schoenbohm will be granted his old KV4FZ call sign remains to be seen. It has not yet been reassigned and appears to be available callsign pool. (W5YI)

**

ENFORCEMENT: NEW MEXICO STATION FINED FOR EXCEEDING RADIATION EXPOSURE RADIATION

FCC enforcement reaches the “Land of Enchantment.” This as the agency proposes to fine A-O Broadcasting $28,000 for alleged violations of the radio frequency radiation exposure limits applicable to transmitters on towers and for other rules.

A-O Broadcasting is the licensee of FM radio station KTMN in Cloudcroft, New Mexico. Amateur Radio Newsline's Bruce Tennent, K6PZW, tells us why the fine is being levied:

--
The most serious charge by the FCC says that KTMN exceeded the radio frequency radiation exposure limits in publicly accessible areas. The FCC maintains that measurements taken by the agents showed that operation of KTMN’s transmitting antenna at only 40% of its authorized power created radio frequency radiation fields which exceeded the exposure limits for the general public by more than 300%. That engineering snafu will cost them $10,000.

Failure to install E-A-S equipment brings another $8,000 assessment while not having a main studio is another $7,000. Lastly, failure to have what the FCC calls an adequate transmission system control is a $3,000 fine.

It should be noted that this is the first case in which the Commission has proposed a monetary forfeiture for a violation of the radio frequency radiation exposure limits.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW.

--

As usual, A-O Broadcasting has the customary time period to respond. More is on the web at http://hraunfoss.fcc.gov/edocs_public/attachmatch/DOC-228609A1.doc (FCC, CGC)

**

ENFORCEMENT: CALIFORNIA RACEWAY GETS FINE REDUCED

Still with enforcement news, the famed California Speedway in the city of Fontana, California, has been fined $8,000 for operating an unlicensed one-watt FM transmitter on 104.7 MHz. The fine was reduced from $10,000 originally proposed, because of Speedway's otherwise good compliance record with the Commission's rules in regard to other FCC permits that it holds. This one is in cyberspace at http://hraunfoss.fcc.gov/edocs_public/attachmatch/DA-02-3105A (FCC, CGC)

THE WEB: UK HAM ASKS HELP IN LOCATING E-MAIL PIRATE

A United Kingdom ham says that he did not originate some nasty e-mails bearing his name and he needs your help to find out who did.

Brian Jones, G8ASO, of Worcester, England says that his name and callsign are being pirated on e-mail that carries what's being described as a rather distasteful message. According to the GB2RS News, Jones says that he is not the originator of those messages. Also, that he is equally appalled by their

content.

Since e-mail can originate anywhere in the world and is very hard to trace, G8ASO is asking your help to track down the originator. If you have knowledge of the person responsible for the unwanted messages please e-mail Brian at bajones@worcester.demon.co.uk. Your information may be useful in an investigation that is now underway. (GB2RS)

**

WITH THE HANDI HAMS: MALIBU CAMP OPEN FOR ENROLLMENT

Enrollment is open for the Handi Hams Winter Radio Camp in the Malibu California. The session runs Sunday, March 2 through Sunday, March 9,2003, at Camp Joan Mier overlooking the mighty blue Pacific Ocean.

The Malibu California Camp is open to Handi Ham members with disabilities, and will offer numerous study opportunities to upgrade licenses and learn new communications technology . If you are interested in attending please e-mail Pat Tice at wa0tda@arrl.net. More information is on the web at www.handiham.orrg (HandiHams)

**

HAM RADIO BUSINESS: KOTT REPLACES MC CUSKER AS WORLDRADIO EDITOR

Worldradio Magazine has announced the appointment of Nancy Kott, WZ8C, as its new Editor. Kott replaces Rick McCusker, WF6O, who left the magazine on 13th November for a career in Law Enforcement with the Sacramento County Sheriff's Department.

Regular listeners will recognize Kott as a long time writer of the "Positively CW" column appearing in Worldradio. She also is the Editor of the FISTS Club magazine "Keynote." For those not aware, FISTS is the world-wide More code preservation society.

Nancy Kott is a resident of Metamora Michigan. As such she is part of a new breed of magazine Editor telecommuting to work. Worldradio Magazine is headquartered in Sacramento California. (Worldradio)

HAM RADIO POLITICS: MEETING TO UNDERSTAND EMC COMPATIBILITY

Ham radio will have a forum of its own at next springs IEEE International Symposium on Electromagnet Compatibility slated for Istanbul Turkey from May 11th to the 16th.

World Radio 2003 will take place in Geneva in June and July 2003. There are several important issues for radio amateurs on the agenda most of them impose a threat from various interest groups on the frequencies allocated to the Amateur Radio Services.

Realizing the significance of the threat to ham radio from radio frequency compatibility issues, the Organizing Committee of the 2003 IEEE International Symposium on EMC, has allocated a special session in this Symposium to deal with problems related to the Amateur Radio Services. This will be the last chance prior to the next World Radiocommunications Conference for ham radio to meet with key persons from the international EMC and Radio community, researchers, regulators and others, exchange views and influence the decisions.

And hams with knowledge in this area are also being invited to provide formal papers, informal papers or a presentation for the conference. More details are in cyberspace at www.ortra.com/emc2003. Just click on the hyperlink marked "Radio Amateurs". (IEEE, ANS)

**

INTERNATIONAL - CANADA: CANADIAN HAMS TO PARTICIPATE IN 5 MEGS EXPERIMENT

A Canadian Amateur Radio Club will be taking part in the 5 Megs Experiment. The Marconi Amateur Radio Club of Newfoundland, under the leadership of Joe Craig, VO1NA, will be conducting a three phase propagation experiment at approximately 5.3 Mhz from the 22nd to the 25th of November, the 20th to the 23rd of December and finally from June 20th the 23rd of 2003.

The call sign will be VO1MRC with operation planned on or near 5.260, 5.269, 5.280, 5.290, 5.319 and 5.329 Mhz. Also the possibility of some time on 5.400 and 5.405 MHz as well.

All operation will be on CW and upper sideband. For further details, contact Joe Craig, VO1NA ny e-mail to jcraig@morgan.ucs.mun.ca. (RAC)

**

ON THE NET: QCWA QSO PARTY RULES ON THE WEB

N0UF reports over the Quarter Century Wireless Associations internet remailer that the rules for the 47th Annual QCWA QSO Parties are now on the QCWA web site at. Its in cyberspace at www.qcwa.org/qsoparty.htm A 2Ø03 Log Sheet and Multiplier Sheet can also be downloaded from the website as well. The 2Ø03 QCWA QSO Parties will be held on April 5th and October 4th of 2003. (QCWA)

**

DX

In D-X, Albania is on the air. A DXpedition team made up of OH2BH, OH2PM, OH5BM and OH8SR arrive in Tirana on Sunday, November 17th. They set up two stations for a one-week activation of ZA1B. Their operation includes the CQ World Wide C-W Contest, with the team's entry planned in the multi-two category. QSL via OH2BH. (OH2BH)

**

THAT FINAL ITEM: GUY WIRE RETENSIONING, LAKE TAHOE STYLE

And finally this week the sad story of KTHO radio in South Lake Tahoe, Nevada. The 590 kHz A-M station was off the air for over a day recently after its AC power and phone lines were destroyed by wind, fire, and falling trees. But it did luck out in a way because its transmission tower is still standing. Well, kind of.

According to Bob Gonsett's C-G-C Communicator, the story goes this way. High winds caused trees to fall onto the guy wires of the station's 305-foot tower. Near disaster yes, but not quite.

Thanks to the Forest Service the tower did not collapse. The crew carefully cut the fallen trees piece-by-piece, gradually reducing the stress on the guy wires rather than allowing them to loosen suddenly.

Thats the good news. The bad news is that the tower is now bent. You can see what it looks like in a photo sequence taken by Bill Kingman, the Chief Engineer of KTHO. It’s in cyberspace at www.steveblodgett.com/ktho.html (CGC)

**

NEWSCAST CLOSE

With thanks to Alan Labs, Amateur News Weekly, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB and Australia's Q-News, that's all from the Amateur Radio Newsline(tm). Oh, heck and darn, Phil...now the resident BAWAs will have
found out and copy you, trying to make themselves look like
"knowledgeable authorities." :-)

[most don't know there IS a Part 0 and a Part 1... :-)]

Yes, I've got the GPO-printed bound volumes for 1995, including
Part 0 and most of the changes since off the GPO site. Getting
bulky and tattered...all those little post-its in there and colored
notations, kinda wish they had the old loose-leaf regs format of
years ago. :-)

> If you will examine Sect. 97.103(c) you will see that the same

> violation of the Rules.

Under the old regs a whole pot-full of "records" had to be kept
for a whole year about SS. Brother Hans of the Order of St.
Hiram said "that was never so." :-)

Technically, the old DSSS emission regs went overboard in
restrictions to just three PRSG feedback points on shift
registers. That made "decryption" much, much easier since

those patterns were relatively simple and a snap to duplicate.

>> In shorter words, restricted to QRP flea power. More enforcement
>> to local-only communications.
>
> Part of the "package".

I don't agree with you. It is terribly restrictive, almost to the
point of making it the same or even less power than Part 15
WLANs...which are out there in almost a million units now.

>> Worse yet, it restricts spread spectrum to just Direct Sequence type
>> with nothing applying to Frequency Hopping. Why?
>
> By Report and Order dated Sep. 3, 1999 this restriction was

>
> (See FCC 97=234, WT Docket 97-12, 15 FCC Rcd 1481)

"ALE?" No, the Eb/No spec is almost right out of Phil Karn's
company for CDMA. There's already a Fed Std for Automatic
Link Establishment and both commercial and government
radio users are following that...on HF. See the SHARES
group and website for illustration.

> The original restrictions were the price of beling allowed to use
> this particular type of modulation. The FCC is obigated to ensure
> that the content of all ARS communications meet the statutory
> "permitted" categories (whether they do it or not is another matter
> that will not be kicked around here).

Tsk, tsk, I sense a "homeland security office" odor in there. :-)
US amateur regs on SS got changed in 1999, not 2001.

Good grief, counselor, there's as many and more RF emitters
out there and in use than there are amateur radios. I don't see
that much restrictiveness in those other radio service Parts.

> There were several of us within the agency who were familiar
> with the military origins and uses of SS and were dead set
> against allowing SS to be used because of the ease of obscuring
> the content and location of the transmissions. New mobile DF
> equipment make these restrictions unnecessary.

Fine...now go out and try DFing a SINCGARS some time when
there's a military exercise nearby. I defy you or anyone to get
a good intercept on them. Should be at least a 100 thousand
plus in CONUS right now. :-)

There's NO problem in finding out about SS techniques (except
for those whose "diploma" ham license was granted long ago

and they stopped "post-graduate" work), either DS or FH. What I see is just the stubborn insistence on certain parties to keep amateur radio technology and operation on the simple level. That way some hams can sound off like gurus all about myth and mystique of radio, using standards and practices of 60, 70 years ago while using equipment designed and made by others today. So much about "advancing the state of the amateur radio art" through severe regulation, thanks to lobbying by a certain membership organization. :-)

>You are slinging Bullshit again. What you were allowed to see was
>declassified ancient technology, if even that much.

Tsk, tsk, tsk, "Ken." On a national holiday, too...

Spread spectrum techniques might have had origins in crypto-
graphic equipment (pseudo-random binary sequences) as well
the same used for signal correlation in the presence of natural
random noise...but the general techniques are NOT classified,
militarily, government, or otherwise.

DSSS has been applied to civilian, commercial WLANs for a
dozen years...about as long as its been applied to CDMA
cellular telephones. See home and office networking wireless
modems.

When the SINCGARS first contracts were let to ITT (Fort
Wayne, IN, a city not a military fort) for development into a
manufactured product, the electronic industry was aware of
it, the contract monies, etc., all the general details. Nova
Engineering did the VLSI design way back when (around 1988
or so) since VLSI was a new thing and needed for manpack
radios (AN/PRC-119). General Dynamics Land Division
(Fort Lauderdale, FL, a city not a military fort) did most of the
early SINGARS production. Both GD and Nova had websites
up over two years ago, accessible to the public. Electronic
industry trades carried all the juicy political implications over
contract awards. ITT Fort Wayne came back with an Improved
SINCGARS (half the old bulk) and did the remainder of the
production. Anyone in the electronics industry could have
learned about it from the PI office at Central Electronics
Command, Fort Monmouth, NJ. Not a terribly high

secret that it existed, nor its general details. There are probably a quarter million of those small-unit radios built and fielded now, having begun fielding in late 1989. You want to know how to operate one, all the operating details? Go to the Fort Gordon, GA, website and download your choice of two nice graphics instruction aids telling all about SINCGARS. It's over in the school section. That family is for all branches of the military and the National Guard. You can even locate the designer-manufacturer of the new airborne SINCGARS, the AN/ARC-210. SINCGARS is a frequency-hopping SS type, hopping ten times per second when selected. All it needs is a net control and a GPSS receiver sync (AN/PSN-11 connection on front panel) to be within the 4 second/24 hour limit on self-synchronization with a net control.

Want to know about DSSS? Dozens of places to find out the details on the web, in the industry trades, in textbooks, in manufacturer's promotional literature. It is widely used, much more than FHSS. It is the heart of WLANs, in radio modems for home or office networking, in cordless phones. In cellular telephony it is everywhere a CDMA (Code Division Multiple Access) cell phone system is used all over the world. None of it is a deep, dark secret...unless all you've got for input is ham contest newsletters. :-)

There's a common misconception that certain radio specs are "classified," secret, never to see the eyes of the general public. Except for specific interior cryptographic electronics, that is total mythology left over from WW2 days, a mystique of "knowing something that others don't know." Nonsense. You underestimate the radio designers of 20 to 30 years ago. The "other side" could capture any of today's military radios and try reverse-engineering it. Even if they built a 100% working hardware duplicate, it still wouldn't help. The COMMSEC (Communications Security) features are flexible enough to allow for that possibility. Spread spectrum isn't a mode for cryptographic security but its digital nature adapts easily to encryption-decryption. Military communications is already set for the "digital battlefield." It has been set for years already. The public that wishes to find that out can do so without any security clearance whatsoever.

SINCGARS isn't "ancient technology" but is the present-day "workhorse" radio for US military small-unit operations, land and air and sea-support tactical operations.

If you wanted to make some honest critique of Phil, you didn't do it right. As one whose work once required deliberately trying to intercept a SINCGARS transmission, I'd only comment that it is DAMN DIFFICULT to find and DF with some snazzy lab equipment. Frequency hoppers are in that category. With

several at all points of the compass the task is terribly hard.

As one whose childhood was during WW2 with all the phrases
like "loose lips sink ships," etc., I'd say you were just a loose
cannon shooting off your mouth about things you don't know
squat about. The world has changed since 57 years ago and
so has most of the radio world...radically so. Adapt or die.
Quit mouthing myth and mystique.

Dick, I don't care whether you believe that story or not. In fact, the person that passed it on to me may have embellished it slightly. Babbling Brucey, OTHO, expects everyone to believe his BS about how he aced the Extra, with no studying and collected $250 to boot. While he may be an Extra, I suspect that he, too, embellished the rest of *his* story.

Heard stories like that from some of the hams here in western Kentucky. Driving to Atlanta or St. Louis to take as many exams as they could in a sitting. You really had to be motivated back then if you lived in flyover country. I was fortunate to have the Philadelphia field office about 20 miles from the house :)

There used to be a waiting period to get the Extra, I think 2 years as a General or Advanced before you could test. I know this was in effect prior to incentive licensing but I guess it was eliminated when incentive licensing took effect in 68

Yes the CDs are geared towards the way it will be given in the test,
especially if they are ARRL VEs or W5YI VEs. In each minute of
transmission, there will be 5 words (i.e. 25 characters). As other posters
have mentioned, the individual letters are sent as if the speed were faster
but the letters are spaced futher apart to make it still 5 words per minute.
It's really much easier to copy this way as you have some time between the
letters to react to what you heard.

>
> FWIW, I'm also using the G4FON software which generates random characters

It is helpful to have practice with the simulated QSOs so I would consider
it an excellent idea to use both the CDs and software. On any software
training program, it is generally wise to set it up at the same speeds as
you expect the test to be. The material with the CDs should tell you what
those speeds are. It is probably a word speed of 5wpm but at a letter speed
equivalent to 13.

Keep at it and hope to see you on the CW bands someday.

I'll confess. Mine's on vinyl. About 1969 or '70 wasn't it?
Careful now, Lenny will soon call us on the carpet for not sticking to
"the subject".

>General or Advanced before you could test. I know this was in effect
>prior to incentive licensing but I guess it was eliminated when
>incentive licensing took effect in 68

No, it wasn't eliminated right away. I had to wait two years to even try for the Extra. Got it on the first go, August 1970. The waiting period to try Extra was reduced to 1 year in 1973 and eliminated in 1976. For more than a quarter century, it's been possible to go from no license to Amateur Extra "right out of the box" if desired.

The original Advanced/Class A license had a 1 year waiting period. When the Advanced was reopened to new issues in 1967, the waiting period was eliminated.

>discussion.

Some folks will continue to argue over them, simply because they were posted by me. Those rules are what's in effect today, though. ARRL played a big role in getting the restrictions reduced. You can read the petition, comments and Report and Order on the FCC's website (Docket 97-12)
>
>Now kindly refer back to the comment in the first line of yer post
>"Hams have been using spread spectrum since 1981". When/where did
>those comms take place in 1981? Callsigns?

The Amateur Radio Research and Development Corporation (AMRAD) got two STAs to try out SS. The first was for a year, beginning in March 1981. Experiments were carried out on frequency-hopped SSB by W4RI in McLean, VA, K2SZE in Rochester, NY, and WA3ZXW in Annapolis, MD. I don't know for sure what band was used, probably 2 meters.

On May 9, 1985, FCC amended the rules to permit all US hams to use SS above 420 MHz, effective June 1986.

Fun historical fact: John P. Costas was probably the first person to recognize the potential of nonmilitary applications of SS. Don't know if Mr. Costas is still active, but he held the call W2CRR for many years. He presented a paper titled "Poisson, Shannon and the Radio Amateur" in the Proceedings of the IRE - December, 1959

>I'm under the impression
>that SS has never been implemented in the ham bands per previous posts
>I've made and I'm willing to eat crow and take my spankings if I've
>been wrong.

Hams have used SS for amateur comms, but not widely. This is due to a number of factors, mostly the characteristics of SS (near-far problem, interference to narrow-mode users, complexity of equipment, no need for secrecy, antenna bandwidth) and the FCC rules. As can be seen, FCC rules since 1999 are not a serious restriction on amateurs who really want to try SS on UHF and above. The BIG problem is that amateurs have content restrictions that do not apply to other services, like Part 15 stuff.

A worthy contribution! I like to go for the deep meaning in lyrics:

"If I were a carpenter and you were a lady, would you marry me anyway? Would you have my baby?" Back when the song and I were young, I was no carpenter and most of the girls I went out with were certainly no ladies.

Heheheh. Don't remember that one.

To me, nothing says "deep" quite like this:

"OOO, eee, ooo-ah-ah, ting-tang, Walla-walla-BING-bang"

One of the things I have been known to do to annoy my boyfriend is to call him at his office, sing ONE line of some obnoxious song that I knew he'd have trouble dislodging from his head all day, then hang up. Now, you must be thinking, what an evil thing to do. I'll say in my defense that he would always do it first! I'd just always be up to returning the volley. 8^)

I realize we're far off-topic, but this has been one danged amusing thread.

Dave, if the Alec Baldwin reference is supposed to be some kind of -ism that is supposed to insult me, you'll have to explain who Alec Baldwin is first. I haven't a clue to what you are referring.

Oh, I also ought to add that you need not waste your time if you do intend it to be an insult. You see, one must be deserving of another feeling insulted, and you are not.

Absolutely!! Hope yours did, too. Yep, I got to cook for my mother-in-law and some of the other members of my husband's family this year. 24 lb. bird, traditional bread stuffing, gravy, they cooked the rest of the offerings and I turn around tomorrow and cook yet another turkey--this one 19 and some odd pounds--along with green bean casserole, traditional bread stuffing, more gravy, peas and onion and mushroom soup casserole, mashed potatoes, and cranberry sauce (the jellied, of course) for my parents tomorrow! Whew.

>20A exciter that did the SSB generation at
>9 MHz and then mixed it up or down to all
>the then-authorized amateur bands. It worked
>surprisingly well, but did require periodic
>adjustment of its two 'balance' controls.

The 20A was preceded by the 10A and 10B, and followed by the 100V and 200V. The former were basic low-power exciters with plug-in coils, while the latter were full featured 100 watt class complete multimode transmitters. The 100V and 200V, along with the companion 600L linear amplifier, had no tuning controls. They used a patented bandpass coupling circuit developed for them.

Even before commercial SSB ham gear, there were hams using both methods - the "W1JEO" exciter and "SSB Jr." are examples of popular homebrew SSB exciters from the early '50s. Also important was the "Cheap And Easy SSB" transmitter in a 1956 QST. This was a 75 and 20 meter phasing transmitter in the 50-100 watt class built on the chassis of a BC-458 ARC-5 transmitter.
>
>I think the clincher for filter-type exciters
>over phasing was the emergence of SSB transceivers
>that used the filters for receive selectivity as
>well as in transmitting.

Exactly. This is why phasing-type receiver designs have not achieved great popularity with hams. 40 dB of unwanted-sideband rejection in a transmitter may be OK in many ham applications, but in a receiver that's not near enough rejection for the ears of most hams, and not as good as obtainable from xtal filters.

Be sure to check out

http://redhotradio.com/

and follow the link to the NorCal 30.

This is a 30 meter CW-only (!) transceiver using the phasing method to achieve high performance (sensitivity and various dynamic-range measurse) with relatively low cost and simplicity. But it only achieves around 45-50 dB of unwanted sideband rejection. It is discussed in rec.radio.amateur.homebrew under the thread title:

Brainstorming Designs for new 40 meter txcvr..

Its designer is one of those long-time-licensed 1X2 Extras who insists on using CW, btw ;-)

>Plus, mobile operation
>with a phasing-type rig would have been
>"difficult".

It was done with the "Cheap And Easy" transmitter - in fact, that rig was specifically designed for mobile operation. A BC-453 and xtal controlled converter did the receiving in the author's mobile setup.
>
>The mathematical underpinnings of the process

>3000 Hz. But that was enough to get on the
>air with a readable signal.

Math or no math, it's the practical problem of maintaining both amplitude and phase balance over the frequency, amplitude and temperature ranges that limits phasing designs. Xtal filtering may be a "brute force" method, but it works when you want lots of unwanted-sideband rejection without lots of fiddling.

What matters to most hams is results, not a lot of theory, math, quoting from technical papers and rants about what "other services" are doing. SSB essentially displaced AM on the ham bands when SSB became as easy and inexpensive as AM of equivalent effectiveness. Amateur filter rigs displaced phasing for the same reasons. When someone presents practical designs for phasing transceivers that compete with filter designs in all parameters important to hams, the trend will swing that way. The NorCal 30 may be the harbinger of such designs - and it's CW-only. How about that.

"Way back when" CW HF networks were used for intercity and
interstate police bulletin and message traffic, replaced in the '50s
by teleprinter. Some of those ops could bang away at 35+ wpm,
especially when sending and receiving the same bulletins day after
day.

Amateur Radio Newsline Report 1320 - November 29, 2002

Amateur Radio Newsline report number 1320 with a release date of Friday, November 29, 2002 to follow in 5-4-3-2-1.

The following is a Q-S-T. The International space station gets a new crew and all are ham radio operators. Newly licensed Solomon Island hams take on an emergency communications challenge and good news for a California ham. These stories and more are coming your way on Amateur Radio Newsline report number 1320 right now.

(Billboard Cart Here)

**

HAM RADIO IN SPACE: NEW ALL HAM CREW ARRIVES AT ISS

The international Space Station has a new crew which plans to start operating the ARISS Amateur Radio station in about three weeks. They boarded the staton on Monday the 25th of November. They plan to be there for about 6 months. All three are licensed hams.

Look for Ken Bowersox KD5JBP, Nikolai Budarin RV3FB and Don Pettit, KD6MDT. They will use the Space Stations calls ... RS0ISS over Europe and NA1SS for the United States. Contacts can be heard on the downlink frequency of 145.80 MHz.

They replace Peggy Whitson, Valerie Korzun and Sergi Treschev. Valerie, RZ3FK, was very active, on the air almost every day, while Peggy conducted many memorable school contacts. (ARISS)

**

RESCUE RADIO: SOLOMON ISLAND NEWS HAMS PROVIDE DISASTER RELIEF

We reported their graduation last week. And while the signatures on their ham licenses may not yet be dry, a group of Solomon Island hams are already off on their first rescue radio adventure to Malaita Island:

--

Thats right Roy. Q-News reports that three graduates from the Amateur Radio Training School of the Solomon Islands have gone by ship to provide emergency communications for flood affected areas on Malaita Island, near Guadalcanal. With them are with 19 tons of rice along with officials of the National Disaster Council.

These new Hams will operate a ham radio station at the Red Cross clinic on South Malaita island. They will report on the distribution of supplies to the National Disaster Council HQ in the Capital of Solomon Islands.

This is the first humanitarian deployment of the school's initial graduates. It also provides the Solomon Island hams their first real experience in helping people with radio knowledge of Amateur Radio.

For the Amateur Radio Newsline, I'm Bill Pasternak, WA6ITF.

--

The three hams making the trip are identified as H44MKA, H44WSB and H44SF. As we go to air they should be operational from a Red Cross clinic set up on the south end of the island. More information is on the web at www.h44A.com (Q-News)

**

RADIO POLITICS: HAM CCR BILL DIES AS CONGRESS CONCLUDES SESSION

The 107th Congress has adjourned without taking any action on an ARRL sponsored legislative measure to free Amateur Radio of land use restrictions commonly known as C-C and R's. The ARRL indicates it plans to try again when the 103rd Congress convenes early in 2003. (ARRL)

**

RADIO AND THE LAW: CALIFORNIA SUPREME COURT SIDES WITH HAM

Still with antennas and land use, we have an update on the court battle of Mark Abrams, WA6DPB versus the city of Rancho Palos Verdes California. Amateur radio Newsline's Bruce Tennant, K6PZW, has the good news:

--

The good news is that the California Supreme Court has upheld the right of a California property owner to use antennas on his property for any reason he wants. It did so on Friday, November 15th when it denied the request of the the City of Rancho Palos Verdes to hear an appeal of the decision of the California State Court of Appeals in the case of The City of Rancho Palos Verdes vs. Mark J. Abrams. This means that the decision of the Court of Appeals is now state law.

The earlier decision of the said that Amateur Radio operators are entitled to an "exalted" status, thus giving amateurs new hope for getting antenna arrays approved. And Abrams says that there are many precedents that can be extrapolated from this ruling, but he says that the case clearly establishes that a city in California cannot tell a resident what to do with an antennas once they approve the actual array.

According to Abrams, the legal precedent applies only to California. But he says that when most states are looking to set a precedent, they will look to either California or New York. And since there is no precedent in New York on this subject, it makes California the one to serve as a guide to other states.

For the Amateur Radio, I'm Bruce Tennant, K6PZW, in Los Angeles. (WA6DPB)
--

Abrams tells Amateur Radio Newsline that he is now going to file with the Federal Court of Appeals to declare the City's appeal of his injunction against the City of Rancho Palos Verdes as moot.

**

Break 1

From the United States of America, We are the Amateur Radio Newsline, heard on bulletin stations around the world including the WE4B repeater of the Palmetto Amateur Radio Club serving Miami Florida.

(5 sec pause here)

**

RESCUE: ZL1AMO REPORTED ON LIFE SUPPORT
The Radio Society of Great Britain reports that well-known D-X'peditioner Ron Wright, ZL1AMO, has been taken ill. According to Wright's daughter Terri, her dad suffered collapsed lungs while in Fiji. He was air lifted by an emergency air ambulance to Auckland New Zealand where he was initially reported to be in critical condition and on life support.
A later report from Terri Wright says that her father is currently in stable but guarded condition. The RSGB says that Wright had been operating from Fiji as 3D2RW. Regular updates on Wrights condition are being posted to the web at www.papays.com/opdx.html (RSGB, ZL2BHF)

**

ENFORCEMENT: EX-HAM ARRESTED FOR ALLEGED ATTACK ON POLICE OFFICER

A former ham who resigned from Amateur Radio has been arrested in the hills of North Carolina following a manhunt that has lasted over a year. Steve Anderson, the ex-AA8DP, is accused of shooting at a police officer.

Anderson was a member of the Kentucky State Militia, a civilian paramilitary group, until April 2001. As previously reported, that militia group dismissed Anderson because he refused to shut down his unlicensed radio operation. (Published news reports)

**

ENFORCEMENT: ATT FINED FOR TOWER VIOLATIONS

The Federal Communications Commission has released an order imposing a $117,000 fine against AT&T Wireless Services, Inc. for safety-related violations of the Communications Act and the Commission's antenna structure rules. This action follows routine antenna structure inspections and related investigations conducted by Commission field offices throughout the country.

Before issuing the fine the FCC determined that AT&T Wireless committed seven separate violations of the antenna structure requirements as outlined under Part 17 of the Commission's rules. Included were failure to register, light, and paint antenna structures, and failure to post antenna structure registration numbers at the base of the antenna structures. (FCC)

**

ENFORCEMENT: VICTORVILLE CA PIRATE STILL ON THE AIR

Another unlicensed station has been discovered in California. According to Chris Compton writing in the CGC Communicator, he noticed a pirate operating on 90.9 MHz in Victorville while driving through the town not that long ago.

Compton, who is a Director of Engineering said that the unlicensed transmitter was taking out KGZO on 90.9 MHz in Shafter. The pirate was also heard doing commercials for his Nextel Store in Victorville.

Now here's the best part. When Compton called the unlicensed operator, the person responded that he had a "demonstration license" from the FCC and that it was good for one year. He told Compton that the licensed allowed him to "demonstrate" the line of transmitters he was selling along with custom built antennas for the FM band. He then asked Compton if I wanted to buy one.

The first monitoring of the pirate was in September. Compton said that he reported the situation to the FCC. He adds that he was in Victorville not long ago and the pirate was still on-the-air. (CGC Communicator)

**

RADIO POLITICS: JONATHAN ADELSTEIN SWORN IN AS FCC COMMISSIONER

FCC nominee Jonathan Adelstein has been sworn in to fill the Commission's remaining open slot. Adelstein will finish out the term of former Commissioner Gloria Tristani, which ends in June.

According to the ARRL Letter, the White House nominated Adelstein last February. But the nomination of the Democrat and a prot,g, of South Dakota Senator Tom Daschle had been held hostage for most of this year because of political wrangling over several judicial nominations. (ARRL)

**
CONVENTIONS AND HAMFESTS: HAM RADIO UNIVERSITY 2003

LIMARC -- The Long Island Mobile Amateur Radio Club - will hold the 2003 edition of its very popular Ham Radio University on Sunday, January 19th. Location is the East Woods School in Oyster Bay New York with the doors opening at 8 A.M. Eastern Standard Time.

Ham Radio University is a day-long session of intensive training in just about every aspect of Amateur Radio. The focus will be "hands on" with many demonstrations. And this year there will be special forums geared to the non-ham as well as the experienced ham radio operator.
There will also be a V-E testing session for those who would like to take an FCC exam and a Special Event Station set up and operational on the High Frequency bands.

Ham Radio University is a cooperative effort between over twenty clubs and organizations in the New York City- Long Island area. It is also the American Radio Relay League, New York City-Long Island Section Convention. For more information about Ham Radio University please contact George Tranos by e-mail to N2GA@arrl.org. (LIMARC)

**

GATHERINGS AND MEETINGS: MORSE CAMP IN THE U-K

A Morse code training camp is planned for the weekend of the 11th and 12th of January 2003 in the United Kingdom. The venue will be The Beacons, Simons Lane, in the town of Frodsham. For further details please contact either Catherine Pearson at RSGB HQ or Kath Wilson, the RSGB Regional Manager for North West England. Pearson can be contacted on by e-mail: toar.dept@rsgb.org.uk. Wilson can be reached at dwilson@btinternet.com (GB2RS)

HAMVENTION 2003: "THE YEAR OF THE YOUNG"

The 2003 Dayton Hamvention will have "The Year of the Young" as its overall theme. Planners say that the show's focus will be on the young ham and on bringing 12 to 18 year olds into the Amateur Radio hobby. More information will be posted on-line at www.hamvention.org as soon as final plans are made firm. (Dayton Hamvention*f*)

**
EMERGING TECHNOLOGY: MICROSOFT EASES RESTRICTIONS ON NEW XP MEDIA CENTER

Microsoft says that it will relax restrictions on how users of its new multimedia Windows XP Media Center operating system will be able to copy and distribute TV programs. As a result of the changes, users will be able to view unprotected TV programs copied onto DVD on any PC with Windows XP Media Center Edition. TV programs with built-in copyright controls will still prevent users from making copies.

Originally, Microsoft had developed the software so that users could only watch television programs stored on the hard disk or copied onto a DVD on only one machine. That being the PC used to record the original content. (Microsoft)

**

OUR HERITAGE: REMEMBERING THE RADIO OPS OF WWW2

The event that lead to the United States becoming involved in World War 2 will be commemorated by Amateur Radio. This, as a group of survivors of the Japanese sneak attack on Perl Harbor visit the USS Hornet and take to the air this coming December 7th.

The SSB Frequencies will be 7.260, 14.320, 21.320 and 28.320 MHz. CW operations will be found on 3.530, 7.030, 14.030, 21.030 and 28.030 Mhz. Operating hours will be from 0900 to 1700 Pacific Standard Time. A special QSL Card will be made available for those who make contact. (KB6SSN)

**

INTERNATIONAL - CANADA: VC2C ON 60 METERS

An update on whats become an international version of the U-K five megs experiment. Word from Canadian that station VC2C was recently given special permission by the Canadian radio authorities to operate on the 60 meter band. It took to the air between the 21st and 25th of October. During that time, VC2C made two-way C-W contacts with four G stations, one GM and one GI operator. All contacts took place on 5.280 MHz. (RSGB)

**

INTERNATIONAL - NEW ZEALAND: NZART CALLS FOR ELECTIONS

New Zealand's national ham radio society, the NZART has placed a call for nominations for those who want to serve on the Council and as the organizations President. NZART says that New Zealand hams have until December 31st to file their nominations. (NZART)

**

ON THE AIR: WSWSS 2 METER NET GOES PSK-31

A popular weak signal net is going digital check-in. David Peters, KI6FF, says that the Western States Weak Signal Society 2 meter Southern California Technical Roundtable net held Tuesdays at 8:30 PM Pacific on 144.130 MHz is going PSK 31 only for check-ins. Once the

evenings roster is complete the net will move to SSB and help people who need to get their equipment and software setup and checked out. (VHF REflector)

**

DX

In D-X, word that G0UIH will be in Australia and active as VK2IAY/P until the 15th of December. During this period, Steve will operate from several different rare IOTA island groups. Look for him on or around 14.260, 18.145 or 21.260 MHz on SSB only.

And NK3T will be active from McMurdo Station Antarctica as KC4 slash NK3T until late January or early February. QSL via his home call.

Also, special event station ER60SB will be on the air from the 23rd of January through the 2nd February 2003. This to commemorate the 60th anniversary of the Battle of Stalingrad. QSL via ER1DA either direct to Valery Metaxa, ER1DA, P.O. Box 3000, Chisinau, MD-2071, Moldova or via the bureau. (This weeks DX courtesy GB2RS)

**

THAT FINAL ITEM: FIGHTING BACK WITH A PHONE

And finally, here's one from the pages of the French e-magazine La Companion that we found surfing the Internet. Its the story of fighting back with a cellular telephone. Amateur Radio Newsline's Norm Seeley, KI7UP, has the curious details:

--

Maybe its all net-lore, but supposedly a female bus rider in a Paris suberb was annoyed by a loud-mouthed cellular telephone phone user a few rows in front of her. The fellow so boisterous that she could not even hear her companion seated right next to her.

Then the cellular bully supposedly made the mistake of mentioning his cellphone number during the conversation. A few minutes later, the lady picked up her own phone, called the man and asked him to: "...be quiet please".

But he refused. In fact he was so incensed by the call that he started to use all kinds of unsightly language. That is until he finally realizing where he was and that everyone on the tram was staring directly at him.

Undaunted, he supposedly stood up, uttered a few more choice words and exited at the next stop. The woman and her companion received a round of applause.

For the Amateur Radio Newsline, Norm Seeley, KI7UP

--

And what else needs be said! (Tommorrows Technology)

Hey, yeah, I remember that song came out when I was a wee little girl, and I recall liking it a lot... now who did it? Shoot, I can't recall. Another song I recalled liking from that same time period was "Horse With No Name" by America. I would not even have been in the double-digits in age yet... :)

Jackie
Back from the local radio store, finally having decided what to buy for myself for Christmas.

> Like I said before, Im not a Liberty to say.

If you are not at liberty to give details, then why did you mention it. In other words, it is all made up. There is nothing to keep you from being at liberty to say if you work for the FCC or not, but I think we all know that answer, you don't. If it was a legitimate bust by the FCC then there is no secrecy, so I suppose we will see it in the FCC enforcement log soon?

>carpenter and most of the girls I went out with were certainly no
>ladies.

HAW! Ya want deep lyrics, here ya go.

"My four-speed, dual-quad, Positraction 409"

"Baby, this town rips the bones from your back
It's a death trap, it's a suicide rap".

(some will say that religious music doesn't count)

Or, just listen to the Beach Boys' "Help Me Rhonda", which is the plaintive
entreaty of a jilted boy, trying to convince Rhonda to help him forget the girl
who jilted him. Never does he say anything about Rhonda - it's all about the
gal who jilted him. Huh?

And we never do find out Rhonda's answer...

The last CW relay station, operated by the Arizona Highway Patrol, was active until it was closed as no longer needed in 1972. There existed a considerable formal network of HF radiotelegraph stations coast to coast which handled reams of police traffic from the early thirties through much of the 60's. Larger cities and many state police organizations almost all maintained stations on the net 24/7 and virtually all police agencies had access since departments with a station on the net handled message traffic for those who because of smaller size did not. This network handles literally vast amounts of routine police communications traffic for virtually every department in the nation. Relays were very common since the vagaries of HF propagation made them necessary much of the time.Several frequencies were in use from 2812 kc through the 7.4 kc region. (I'm not where I can get my hands on those manuals right now and don't remember the exact 7 mhz frequencies-which of course were known as kc and mc in those days).

I have a couple of APCO(Associated Police Communications Officers) manuals from 1945 and 1951 which detail the net, the stations with callsigns, and frequencies monitored by each of them. There has been very little history recorded or retained concerning this net, but I knew and still know some of the surviving operators, many of whom were hams. Most have gone SK, though, sadly. In my archives I have a printed copy of a first person account detailing some experiences of an operator who spent twelve years working at the Flagstaff AZ CW relay station on the interstate police CW net. A couple years ago it was on "The Telegraph Office" K5RW website but has evidently been removed as I wasn't able to find it last time I looked.

Although teletype was in widespread use during much of this period, and TTY networks were in use on the east and west coasts in the more densely populated areas, radiotelegraphy was employed widely on long distance circuits mostly as a matter of economics. Recall that AT&T had a monopoly on all long distance wire circuits and their dedicated line charges were not pocket change in an era when costs were a serious concern to most governmental bodies. Today they just appropriate the money. Then they looked for ways to save taxpayers dollars. That savings came from using dual-role dispatchers, many of whom were also qualified and licensed as commercial CW operators and who handled radiotelegraph traffic as

well as their dispatching duties. Many of these same employees also held radiotelephone licenses and often did repair work on mobile and base station equipment on an as needed basis. It was indeed a cost effective system.

When I was hired by the communications division of the Highway Patrol in my state, in the early spring of 1965, I was given a CW test, and one of the main qualifications they wanted to see was my First Class Radiotelephone license. While I didn't have a commercial CW license at that time, I was informed that I might later be required to obtain one, since we still had an interstate CW relay station in service at the state capitol HQ and I was being assigned there. As it turned out, my initial assignment was changed due to an illness of another employee in a different part of the state. I was sent to replace him temporarily and by the time he returned to work they had decided to add another operator at that station, and I was given the assignment. All the in-state stations had converted to teletype about 6 months previously, although each still had the Collins CW transmitter and the HF receivers in place and ready for use. They were retained for a year before they were phased out and removed in 1966.

I was later a part of the technical crew that removed the CW transmitters (two large Wilcox units running 450TH's in the finals) and took down the dipole antenna farm at the state HQ relay station in 1975.

I love that (p)icture(.) (I)t(')s so true, but there is one problem I
noticed. Most
CBplussers use a (s)oldering (t)orch instead of (s)oldering (g)un, but only
when
working on (p)rinted (c)ircuit Boards.

While looking at these posts, it's always easy to spot Babbling Brucey's
improper use of upper case and no apostrophe's, not to mention wrong usage.
("your' vs. "you're", "there" vs. "their" vs. "they're", "to" vs. "too")
...and yes, I've cross-posted this to rec.radio.cb so that they, too, can
see what an idiot you are.
Like I said before - if you write one full line of text that has no errors
in it, I promise I'll stop.

> I forgot. You can't do THAT mode!

I'm allowed all legal modes, yet it was you who turned down an
invitation from Hans to operate your favorite mode. The one mode that
works when all the others fail. The one mode that can be implemented
with the guts of a Philco B&W TV. The one mode you faled to use
because you were away from the home QTH. Hi hi!!!

Your words ring hollow.

I don't think the latter paragraph is exactly true. You can make the same spectral energy measurements for FHSS as for DSSS, and the 23 dB number should give you about the same advantage for either. The only problem I can see is that it adds an implementation constraint for FHSS. Measuring (N0 + I0) probably requires the reciever to have its bandpass filtering designed to receive the entire bandwidth the signal is spread across, something which will be inherently true for a DSSS receiver but which might not be the best way to build an FHSS receiver.

The first paragraph is, unfortunately, much more true than I'd like it to be, though I think the blame for this regulation may lie with the amateurs interested in spread spectrum who advocated this constraint during the proceedings (in particular Phil Karn, if I'm remembering correctly) rather than the FCC. It is not that their heart wasn't in the right place. There is a theoretical result which says that a spread spectrum communications network can be scaled to an indefinitely large number of transmitters if all transmitters use the minimum energy necessary to sustain communications, so automatic power control is sometimes viewed as a prerequisite to achieving many-user scalability. As such, the requirement for automatic power control of amateur equipment seems like a good, theoretically sound way for amateurs to achieve optimal sharing of the spectrum used for this purpose.

The big problems with this are that it presumes a particular set of applications for higher-power spread spectrum and it lifts the complexity bar for getting anything on the air at all. These are both poison for an experimental service like the ARS. Automatic power control requires

that the transmitter adjust its operation based on data only the receiver can measure, so it inherently requires bi-directional connections so the receiver can regularly transmit its measurements back to the transmitter (and vice versa). This imposes additional complexity if the receiver doesn't have much to tell the transmitter other than to provide it with power control information, since it forces the receiver to transmit solely for the purpose of sending power control information and there are reliability problems to solve if this isn't done frequently. Also, while this is still not bad if the transmission is point-to-point between a single pair of transmitter/receivers, it becomes more difficult if the transmission is point-to-multipoint (i.e. many receivers) and it is impossible to support if you want to have receivers which are entirely silent and never transmit.

Note that the constraints which automatic power control places on the application are reflected exactly in its use in industry. For cell phones, where all connections are point-to-point between the handset and base station and inherently have a substantial amount of chatter going in both directions, automatic power control is natural and a big win (not only for scalability, but for maximizing battery life in the teeny tiny handsets). For WLANs, however, many transmissions are point-to-multipoint and nearly-silent recievers are allowed to exist, so automatic power control isn't necessarily done at all (almost certainly not by the access points) and the problem of near and far transmitters is instead accomodated by dropping the data rate for the far-away and mostly-silent guys.

So automatic power control places an application constraint on an experimental service where applications are often what the experiment is about (this is increasingly true since the complexity of these devices makes it far more likely that "experiments" would involve adapting existing gear for some amateur application rather than attempting to design something from scratch). Worse, if you look at things in common use in the ARS, like repeaters, you'll find that many existing amateur applications tend to look a lot more like WLANs, where power control isn't used, than like cell phones, where it is. And, even worse, when it comes to adaptation of technology the non-power-controlled WLAN stuff is fairly accessible for amateur experimentation while the power-controlled cell phone gear is so specialized and unavailable (base station hardware, at least) that it is pretty much inaccessible.

So I think you are right about the first point, the power control requirement for amateur SS practically limits amateur power output to about that allowed for Part 15 devices. Given the lack of much of a power advantage for ARS SS versus Part 15 SS, along with the annoying and often impractical content restrictions for the ARS which don't exist under Part 15, it becomes hard to see why anyone with a desire to play with this stuff would do so under ARS rules rather than just observing the Part 15 rules. Note that the most ironic thing about the latter is that much of the Part 15 stuff is done in amateur bands anyway, so what it amounts to is that if you identify the

transmission as an amateur transmission you end up with a bunch of restrictions on what you can send and who you can talk to, while if you don't identify at all and just do it you can instead (legally) do anything you want.

I don't think any of the other restrictions on amateur SS represent much of an impediment to anything but the automatic power control constraint, certainly in conjunction with the low uncontrolled power limit and the content restrictions, is a killer. It also seems to me that the fact that the only exemption for broadband modulation in the ARS is SS is already out-of-date with respect to current WLAN technology since I don't think it is correct to call the OFDM modulation used at 5 GHz in IEEE 802.11a, and proposed for use at 2.4 GHz in 802.11g, "spread spectrum", yet there's no one on the planet who is likely interested enough to ask the FCC to add another exception for this.

All of which leads back to my very favorite amateur radio policy whine. If the ARS is to retain the unique experimental nature of the service described by its basis and purpose then it really needs to dump all the mode and content stuff and come as close to "here are your band edges and power limits, please stay inside them" regulation as is practical. In recognition that most of the stuff going on in amateur radio is operating rather than experimenting, and the long tradition of individual US amateurs behaving well only when forced to by enforcement of federal regulations, I'd be prepared to see subbands distinguished by occupied bandwidth remain at HF and below, and to see content(-transparency) restrictions remain anywhere where the bands are busy and/or long distance circuits are possible, but that's about it. It makes no sense for an ARS licensee, who has demonstrated both an awareness of the regulations concerning his operation and at least a modicum of technical competence, who is required to identify himself as the source of his transmissions and to refrain from operating for monetary considerations, to be constrained from doing anything that a Part 15 user, who can transmit anonymously, for pay, and who is permitted to be ignorant of everything up to and including the fact that his equipment is producing RF, is allowed to do, often on frequencies allocated to the ARS. Why is a large company like T-Mobile allowed to do something for profit in amateur allocations (see http://www.t-mobile.com/hotspot/) that amateurs can't even do for self-education, public service and/or fun?

I hence don't think amateur radio SS regulations are any more onerous than regulations for other modes. The automatic power control regulations are unfortunate, but are simply a specific example of what is generally wrong with ARS regulations with respect to 97.1.

Kim, its part and parcel of Amateur Radio. If there were a license
class beyond Extra, you'd hear someone "encouraging" you to get it at
least 3X per QSO.

One license, called "Amateur Radio License," would solve it all.

It would be interesting if Babbling Brucey had to write up the paperwork on this supposed bust. I'm sure the FCC officials would've been shaking their heads in disbelief at how someone who passed the Extra test could be so functionally illiterate.

I don't know how you figured it out. Yes, my call sign is KB1HMW.

V.S., Technician class Amateur Radio license, KB1HMW

I have the ability to encode a table of realtime encoded symbols - more "characters" than the Morse code. However, Morse code is not enjoyable or useful to me and it would better serve me and Amateur Radio to maintain my technical skills.

To the person that corrects spelling. Let's leave that alone. Spelling and grammar should count in formal reports, but reasonable misspelling in an internet posting is okay. It is hard to maintain spelling in an internet posting and there should be some allowance. Sometimes typing quickly can cause incorrect spelling. Incorrect spelling or grammar does not mean the person is less intelligent. The content of the message is what's important.

From: wa8ulx@aol.com (WA8ULX)
>If they had the same License Testing they do now when I was first licensed, I >would have Probably have been an Extra at 4 years old

I could not have passed the Extra at 4 years old because I did not have "Ham" relatives and did not know about it then. I went to a Hamfest with a coworker who is a Ham. I have been an Amateur Radio enthusiast and have "Homebrewed" the same, a while before I even heard of "Ham" Radio. (And, no, I did not come from CB - not that there's anything wrong with that).

I actually agree that the license test is very easy and a young person can pass it easily. The Technician test is probably the hardest of the three tests. The few young people that took the test with me passed the Technician test after a one-day "review" session, where all the answers to the test was given. The new members of Ham Radio had nothing to do with the license test and should not be insulted because they passed this new easier test.

Lack of interest in the "other" potential areas of amateur radio is a greater problem than the testing. This includes the old timers who are the majority of Hams. The Hams at the clubs don't seem to show any interest in things other than operating and antennas. Group projects, radio direction finding, kit building, designing circuits, using test equipment, troubleshooting, AND antennas should be included as part of club activities.

I would be willing to take an active role in any such project, but I cant if there is no interest.

Oh, its much like things I feel you should know about amateur radio,
Kim. You feel that you can simply look them up if you find a need for
them. You could have done the same by looking up "Alec Baldwin". A
simple internet search would have clued you in to the fact that he is a
pretty well known movie actor.
You might have also learned that he stated (to the news media) that if
George W. Bush was elected to the presidency, he'd leave America.

> Oh, I also ought to add that you need not waste your time if you do intend
> it to be an insult. You see, one must be deserving of another feeling
> insulted, and you are not.

...or the insulted party has to be sharp enough to figure out why she
should feel insulted. It is okay with me that you didn't get it.
Others did.

Not necessarily. Many rules of English grammar are flexible. Example:

"Like father, Like son."
"Like sands through the hourglass, so are the days of our lives."

Even split infinitives have become acceptable. Example:

"To boldly go where no one has gone before" <- (politically correct version)

Uh....Kim? The song doesn't have the word "gentleman" in the lyrics.
Thanks for playing our game though.

yerr a hard, cruel man Jim!

Having my baby,
what a lovely way of saying how much you love me.
Having my baby,
what a lovely way of saying what you're thinking of me.
I can see it
Your face is glowing
I can see it in your eyes
I'm happy in knowing...

That your having my baby,
you're the woman I love and I love what it's doing to you.
Having my baby,
you're a woman in love and I love what's going through you.
The need inside you
I see it showing
Oh, the seed inside you baby do you feel it growing.
Are you happy in knowing...

That you're having my baby,
I'm a woman in love and I love what it's doing to me.
Having my baby,
I'm a woman in love and I love what's going through me.
Didn't have to keep it
Wouldn't put you through it
You could have swept it from your life but you wouldn't do it.
No, you wouldn't do it...

And you're having my baby,
I'm a woman in love and I love what it's doing to me.
Having my baby,
I'm a woman in love and I love what's going through me.

Sorry to have to resort to such strong medicine, but people were getting out of hand here! ;*)

Oh Gawd--I know most of those guys. Bill Bartlett and his pals were "The Lemon Pipers" from College Corners, Indiana, not far from Cincinnati. They were still driving around in a Caddy limo in 1973 (by that time primer gray) purchased with the proceeds of their single hit. Bartlett was in a band called "Starstruck" in those years. A few years later, Bill was the moving force in the band "Ramjam" which hit the charts with "Black Betty" ("Black Betty had a child...The damn thing's gone wild").

It seems to be "verb stingy" like some of Leonardo's stuff.

> "Like sands through the hourglass, so are the days of our lives."

How about, "Like, Daddy--you got the chord changes but you need to work
on the lyrics."?

> Even split infinitives have become acceptable. Example:
>
> "To boldly go where no one has gone before" <- (politically correct version)

That one is just a clause which has been lifted from a sentence. Not
only that, it came from the land of television where "Winton tastes good
like a cigarette should" was deemed to be correct use of English.

>you don't identify at all and just do it you can instead (legally)
>do anything you want.

This professional regulator was and still is in favor of not letting
the Part 15 stuff into the amateur bands but remember that the bands
in question are/were ISM bands, the equivalent of a public RF dump.
When I was a member of the (Bay Area) Wireless Communications
Alliance most of the other members were manufacturer technical and
sales staffers and I ranted and raved about the dangers of having a
WLAN operate in proximity of full-power amateur transmitters - mostly
front-end overload - but no one wanted to hear that (except DeWayne
and he only smiled...)

But the horse has already left the barn.....

>All of which leads back to my very favorite amateur radio policy whine.
>If the ARS is to retain the unique experimental nature of the service
>described by its basis and purpose then it really needs to dump all
>the mode and content stuff and come as close to "here are your band
>edges and power limits, please stay inside them" regulation as is
>practical.

I would agree with you on everything except content. The main thing
that is keeping the commercial interests from swallowing up the
amateur bands worldwide - and they certainly have the financial
leverage to do it - is that we do not pose commercial competition
to them - and that mandates content control.

>Why is a large company like T-Mobile allowed to do something
>for profit in amateur allocations (see http://www.t-mobile.com/hotspot/)

The public RF dump, you mean....

>that amateurs can't even do for self-education, public service and/or fun?

Money talks. Big money talks loudly.

>I hence don't think amateur radio SS regulations are any more onerous
>than regulations for other modes.

Agreed.

After not being on HF for a long while I decide to get back on. Well only 160 Meters, I prefer that Band because there are very few CBplussers there, why you ask, because most CBplussers cant make a Ant work there, to Technical for them,which also makes for a good CBplusser filter.

Hey, Krell, go to hell.

Stop cross-posting all this drivel to rec.radio.cb, you troll.

Do you see anything wrong with this grammar?

>> Japanese breakthrough rig which finally broke the backs of both hollow
>> state ham technology and the U.S. ham gear manufacturers.

The Japanese displaced most of the American ham gear mfrs. a few years earlier.
Kenwood TS-520 and Yaesu FT-101 were key players in the takeover. They were not
super rigs in any sense - they simply offered a good mix of performance and
features at competitive prices.
>
>Not being a serious DXer or contester or field-day op,

>here on r.r.a.p.

And where did it lead? One of the top demanders for "better modes and modulations" who decried "legacy modes", "elitist call signs" and "electronic paintball wars" shows up with a new 2x1 vanity call and tells of us his 70+ DXCC countries on HF SSB. Surreal, man, surreal.

>And V/UHF-FM with EchoLink and IRLP sure
>isn't your daddy's (or your) Heathkit DX-35 novice rig.

Why not have both?

>Just
>like in the 60's, though, I have no idea where the hobby/avocation
>is heading. I'll just be happy if it survives.

Well, let's see:

In the '40s, they said the WW2 shutdown would kill it
In the '50s, they said TVI, novices and SSB would kill it
In the '60s, they said incentive licensing and the space age would kill it
In the '70s, they said cb, FM, and Japanese rigs would kill it
In the '80s, they said computers, cell phones and the VE system would kill it
In the '90s, they said the internet and nocode ham licenses would kill it

And here we are in 2002 with more US hams than ever. Go figure.

>might encounter.

Most hams, yes. But some hams were builing their own TVs in the '30s and TV
transmitters in the 40s and later. Radar is another matter, because it's not
about communications. I do recall one QST article in the '50s about a pulse

modulation system that could be used in "radar mode".

Point is, most hams of 50 and more years ago had to be fairly "technical" to even get a station on the air. All that changed in the '50s and '60s.

>> Yet it was in late '52 that FCC gutted its incentive licensing program!
>
>Go figure.

Yup. Nobody seems to know why it was done. Here are two possibilities:

1) Requiring an Extra for HF 'phone was considered too much, and so the FCC went in the opposite direction
2) FCC thought that allowing more hams to use HF phone would promote development and use of SSB

>> >Hams could be hired directly into technician type jobs by industry

>where the faulty board is then sent to a central repair depot for
>computer diagnosis and then specific component replacement/repair.

Exactly. Often the faulty board is not even repaired because a new one isn't
much more expensive. PCs are the perfect example - boards, drives and power
supplies are considered components and rarely if ever repaired.
>
>> >Anyway, just some thoughts.

This divide goes all the way back to pre WW1. Some hams were concerned with
pushing the technology, while others were concerned with seeing what the
technology they had could do. Both are needed.
>
>> How many hams would there be, and what technology would we be using, if

(T)hat way(,) you can pretend to be a real Ham(.)

Sorry, Brucey, but an amateur radio license, as issued by the FCC, is all
one needs to be a "real ham." Some of the so-called "CB-plussers" I've met
are more of a ham than you'll ever be.

Yes, it did. In fact, both William Shatner and Leonard Nimoy made an entire album each, covering various hits of the '60s. I'm not sure about DeForest Kelley.

I am not making this up.

And in trying to prove your point Hans, you show exactly what is wrong. I read the first sentence, figured it out and stopped right there. Its just too hard to read. Why anyone would post messages a large portion of intended readers will ignore is beyond me. In hte end, its just a urinating contest with another poster. If we are going to write in english, we might as well do it correctly.

Then again, a fellow I worked with once said "I have no respect for anyone who only knows one way to spell a word."

>To the person that corrects spelling. Let's leave that alone. Spelling and
>grammar should count in formal reports, but reasonable misspelling in an
>internet posting is okay.

The occassional misspelled word will happen...No roblem. However there is
an attitude of malaise about our language and it's applications that is
peermeating society, and a lot of it's due to the "it's the internet...it's OK"
attitude.

It's NOT "OK". The invention of the microprocessor did not sound the
death knell of good grammar.

>It is hard to maintain spelling in an internet
>posting and there should be some allowance.

Why is it hard? Use a spellchecker. If not a spellchecker, just go back
and re-read what you wrote before hitting the "send" key. I have a terrible
habit of transposing the letter "a" with "h" in words like "have", "had", etc.
But 30 seconds of rereading my post ususally catch most of them.

>Sometimes typing quickly can cause
>incorrect spelling.

Then slow down! What's more productive? Trying to type at 60 WPM then
having to go back and correct your errors, or typing at 30 WPM and getting it
right the first time?

>Incorrect spelling or grammar does not mean the person is
>less intelligent. The content of the message is what's important.

Vipul, I would have thought that the lesson you just got taught about
"attention to detail" would have sank in by now.

Yes, the content is important. But making an impact counts more. If you
cannot effecitively express your opinion, what good is it?

>I would be willing to take an active role in any such project, but I cant if
>there is no interest.

There's an old axiom that is well known in the Armed Forces of the United
States, Vipul...it's "Lead, Follow, Or Get Out Of My Way".

You have been given some suggestions on how to go about organizing a "club" (group, team, whatever you care to call it) of like-minded individuals. Have you done it? Or are you just waiting for someone else to do it for you?

Are you one of those folks who want's to do "something", but just doesn't know where to start? Are you more of a "joiner" than a "leader"...?!?!

In the word's of a famous sports' clothing retailer..."Just Do It".

>

Well, you and I are pretty sure that is the way Dick really thinks. BUT I
figured, since he's posturing to be a friendly sort of fella around the
"newer" folk on the newsgroup, maybe he'd had a change of heart; or maybe
we've (I've) even misunderstood what he really feels about about the
questions I asked above.

I sort my messages by "time sent" so I don't know if Dick has responded to
my questions yet. However, I'll go out on a limb and "figure" that Dick
won't be answering because he knows-that we know what the answer(s) is/are.

> One license, called "Amateur Radio License," would solve it all.

I really don't have a problem with "incentive" licensing concepts or
testing. I have a huge problem with the process by which the testing is
done, and certainly have an even huger problem with arrogance on behalf of
someone who thinks they're better than a lesser licensed person. However,
the folks in here who demonstrate that sort of behavior are, by far, the
minority in ham radio (even though they have the greatest capability to
impact the impression of ham radio--that's another debate). The folks in
here who exhibit crappy attitudes are here *BECAUSE* of their crappy
attitudes...uh huh.

Ain't it amazin'? I've never seen--in this newsgroup--anyone with even the slightest credibility expressing any kind of sentiment such as Dick purports above. Yet, he acts like that is a common contention in this newsgroup--and treats you as though you are the person carrying it.

I think Dick has a bone toward someone local or on the air that he's dealt with and will hold a grudge forever against.

The greatest arena in the world for someone who is a bad speller--even not
so good at sentence structure--is a computer. All one need do is remember
to spell check and use a grammar checker. Waddles doesn't even take that
step--and his transgression against the language of American English are
many and constant: not just casual. I doubt Waddles can think fast...let
alone type fast. Let alone that he does nothing but act like a small child
would in an argument where someone's taken away his crayon.

You said it yourself: "if (you) find a need for them." Dave, I don't feel a
need to know what or who Alec Baldwin is. Coming from you, I knew it was
some simpleton sort of thought process, since that's pretty much all you can
muster.

>

Well, you see, Dave. I don't dwell on crap like that. My life is much more
exciting than living it by a book. You see, there are things I am near
certain you've said in your life that were never done. That is, unless you
consider yourself *that* far above the rest of us. And, that is your
problem.

And, it's OK (quite OK) that you don't have any impact on me at all. I consider you nothing more than a name...nothing more than an arrogant bastard who isn't worthy of affecting me in the least.

to
> even get a station on the air.

But the point is that being "fairly technical" did not
encompass the scope of knowledge that constituted all of
radio technology at the time (1950s and earlier).

All that changed in the '50s and '60s.

Two things changed:
(1) The availability of cheaper commercially available rigs, and
(2) The body of knowledge that constituted electronics and
the application of electronics began to grow tremendously.

> >> Yet it was in late '52 that FCC gutted its incentive licensing program!

Someone must have the original documentation that went with the
FCC R&O that was issued by the FCC in late '52. What
was written about the change in QST?

In the PC arena, the equipment also is almost obsolete the day
it is sold as new because the next generation of PC boards is
already in the production planning stages.

Agree 100%. Indeed, if all hams were only in it for
the technology then we'd have no emergency response
capability which is also a prime reason for ham radio.

> >> How many hams would there be, and what

Yup! And the biggest issue of the two (cost and time) for
me these days is time.

Cheers and I hope everyone had a safe and wonderful
Thanksgiving with family and/or friends.

Gosh, I can't figure out if you're speaking for Dick, or what. At any rate, no it wasn't in a snit at all. My "exit" the last time was because it disgusts me that there are really people like you in this life. It's like witnessing someone who'll pull into a handicap parking space with absolutely no handicap: one hates to be confronted with the reality that a person like that really is around.

However, my not being here doesn't make you and people like you go away. In fact, as someone sent to me: if I go away, it might make you more right. We all know that isn't true. I can post a message and be as truthful, cruel, nice, factual, or suppositional as I want. And, I'll always counter the misguided arrogance of an insignificant part of this hobby--for those who think like I do but choose to be silent. It was the silence of others that allowed, well...we won't go into that here.

> other services, like Part 15 stuff.

Non-sequitor, we have a whole litany of regulatory restrictions we
have to deal with which do not apply to other services including
content, transparency of the comms and a number of others and most of
those go back to the early 1900s. That's why we're called "the
amateurs". Doan like that? Then quit whining and get the commercial
licenses.

As you and others here have pointed out here SS in a usable form is
legal but is not used. At all beyond a few old experiments from what
I've read so far. Which is not the case with the whole load of modes
we do have available and do use. I don't see any show-stopping

regulatory or technical barriers to the implementation of SS on the ham bands in some form or another.

Looks to me like the problem is actually based in the investment and coordination requirements inherent in the implementation of SS on any useful scale which are far beyond the ability of hams to pull together.

I wuz there during the repeater wars . . Can you imagine "SS wars" . . ?

Cartoon fodder.

The problem is that the number of club and other licenses is not small, and the rules have changed repeatedly. There was a time when many hams had secondary station licenses for place of business, vacation home, etc. Some hams had a whole list of secondary station licenses. Then FCC dropped that option and tens of thousands of station licenses disappeared. Did amateur radio shrink because of that rules change? If you look at station licenses, the answer is yes, but if you look at operator licenses the answer is no.

Total license numbers are only one indicator, and a vague one at that. With 10 year license terms since 1983, the effect of various rules changes and social/technological/economic factors is so muddied that it's an almost-useless indicator.

What's most important is how many active, on-the-air hams there are at any given time.

Which is better:

1,000,000 US hams, of which 100,000 are active

or

500,000 US hams, of which 300,000 are active?
>

Agreed, CK722s at $7.50 a pop were not much of an incentive to use 'em
in ham radio. But as time wore on the transistor became the early ICs
in the '60s then they became what they are today. Millions of 6H6s &
6B6s in packages the size of a 6H6 socket. We can't even hope to
duplicate those ourselves, the result is today's 99% plug & play ham
radio. Took awhile but in the end . .

> transistors in the late 60s....at least for ham gear.

In the '60s & early '70s absolutely. The other big problem with solid
state equipment was the lousy dynamic ranges of solid state devices
vs. tubes particularly in HF receiver front ends. Solving that one
didn't happen until close to 1980. Which came three decades after
Shockley's transistor.

They were on-air tests between the locations listed. Might have been on HF for all I know. They were FHSS using a maximum spread of 100 kHz. Power on the order of 100 watts, dipole antennas.

Results were not any better than regular SSB.

>amateurs". Doan like that? Then quit whining and get the commercial
>licenses.

Who's whining? I'm just stating facts that some seem to forget. Part 15 has all sorts of restrictions, too.

The bands above 30 MHz are not "line of sight" by any means.
>

>As you and others here have pointed out here SS in a usable form is
>legal but is not used. At all beyond a few old experiments from what
>I've read so far.

I'm sure there's some amateur SS being done by hams right now. But it's not being done by those who moan and whine about "new modes and modulations" on newsgroups.

>Which is not the case with the whole load of modes
>we do have available and do use. I don't see any show-stopping
>regulatory or technical barriers to the implementation of SS on the
>ham bands in some form or another.
>
Nor I.

>Looks to me like the problem is actually based in the investment and
>coordination requirements inherent in the implementation of SS on any
>useful scale which are far beyond the ability of hams to pull
>together.

Why do the investment and coordination if it's not necessary?

Military use of SS makes sense because of the need for secrecy and making DF difficult/impossible. Hams have no need of either.

Nonmilitary use of SS is based in part on secrecy and part on interference avoidance without coordination. Again, hams have no need of either.

All that's left is process gain.
>
>I wuz there during the repeater wars . . Can you imagine "SS wars" . .
>?
>
>Cartoon fodder.

"Imagine if they gave a war and nobody showed up".

What the pundits forget is that the driving force behind most hams' mode choice is simply fun. If a rig or mode is fun to do, hams will use it, within the rules. If it's no fun, all the hand-wringing and preaching to the masses will have no effect.

That is certainly leaving in a snit, Kim. Unless your definition of
snit means, "in a cloud of flower petals".

Hi Dee: Were you referring to me being the "anyone would stoop" person? If so, please understand that my feelings about George Dubbya, et al, don't have as much to do with that they are of any particular political choice as it does that I strongly disagree with the tactics being employed in this country (the US) at the war cry of terrorism.

That is why I said it may be that we'd not have to "leave" the US to feel like we were in another country. However, I don't think you were speaking of me being the "anyone would stoop" person. Oh, and by the way, the cigar comment really isn't something offensive, I don't think. It's rhetorical, sure, but offensive?

Cigar

That kind of remark is uncalled for and inappropriate for this or any other discussion group. By the way, I happen to support Bush but am appalled that anyone would stoop to such comments about a person just because that person happens to have a different political choice. Each person is entitled to their own opinion about politicians.

I happen to agree with your opinion of the Clintons but do not think it appropriate to launch personal attacks on Kim because she doesn't care for Bush.

Do your research. I took my Extra class test under the old 5 level
incentive licensing program with the 20 wpm CW for Extras. Political debate
is NOT well served by disparaging personal remarks.

Yes. This was when the original Star Trek series was at the peak of its popularity.

>I'd love to hear what Dave Barry has to say about this egregious effrontery
>to human hearing.

Actually, he has a precise criteria for the "bad song" category. Country and western songs, operas, Neil Diamond/Barry Manilow songs, show tunes, novelty songs, comedy songs, parodies and obvious celebrity things like the Shatner record (which even Shatner himself did not take seriously) are disqualified on general principles. The "Book Of Bad Songs" focuses on pop songs that were meant to be taken seriously, and that scored high enough on the charts and playlists to imprint themselves on our collective cultural memory. IOW, songs that everyone knows and wishes they didn't. Songs you recognize on the first few bars and spend the rest of the day trying to get out of your head.

btw, if I'm ever going through the desert on a horse, I'm going to name the &^!*$ thing!

Don't waste your energy. Babbling Brucey would prefer to live in his own
little world of ignorance than admit that someone is better than him. He's
even admitted that he's proud of his ignorance, whether he realizes it or
not.

Vshah,

I have no problem with the fact that you don't use Morse code. But you make
yourself look like a 3rd grader when you suggest that others who do enjoy
using it are not adult.

Just thought you'd like to know.

>> up in the late 50s.

Patent for the transistor announced by Bell Laboratories in
December, 1947. Co-inventors were John Bardeen, William
Brattain, and Shockley.

>Agreed, CK722s at $7.50 a pop were not much of an incentive to use 'em
>in ham radio. But as time wore on the transistor became the early ICs
>in the '60s then they became what they are today.

In 1956 that price was for two Raytheon CK722s and a small
softcover book describing transistor action and a list of Raytheon
semiconductor products. If you look into amateur radio
publications of 1952 you will find a couple of construction
articles using Philco SPADT (?) HF-range transistors.

>Millions of 6H6s &
>6B6s in packages the size of a 6H6 socket.

What in the world are you talking about? A 6H6 is an
ancient dual diode tube. A 6B6 is an ancient diode-triode
tube. By 1950 the 6H6 was replaced by the 6AL5 and
the 6B6 by a 6AT6 in all new designs. 52 years ago.

The modern integrated circuit can contain hundreds of
thousands of TRANSISTOR JUNCTIONS. Those junctions
have no real counterpart to vacuum tubes except for FET
types...even then FETs can be made with biasing opposite
to vacuum tube supply-biasing.

>We can't even hope to
>duplicate those ourselves, the result is today's 99% plug & play ham
>radio. Took awhile but in the end . .

Since when was it standard practice to "duplicate" vacuum tubes in the hobbyist's workshop?!?

As of 30 years ago, the total number of IC structures available on the market (purchaseable by amateurs) far exceeded the number of vacuum tubes EVER made...EIA-registry transistors were already into the 4nnn range and diodes in 6nnn range, not even counting the variations included in "house number" parts.

As of 10 years ago, the number of ICs designed as "systems on a chip" (microprocessors, microcontrollers, complete AM BC receiver active devices, operational amplifiers, etc.) exceeded the number of vacuum tubes ever designed. Field Programmable Gate Arrays (FPGAs) allowed anyone with a "burner" circuit to literally "make their own" complex digital circuit.

There is an incredible availability of semiconductors today that has been growing, growing, growing over the last three decades. A quick look at any Digi-Key or Allied or Newark mail-out catalog will qualify that.

>In the '60s & early '70s absolutely. The other big problem with solid
>state equipment was the lousy dynamic ranges of solid state devices
>vs. tubes particularly in HF receiver front ends. Solving that one
>didn't happen until close to 1980.

"Lousy dynamic ranges of solid state devices?!?" :-) :-) :-)

Tube-type HF receivers were seldom specified for intermodulation. That doesn't infer that tube sets had "no" intermodulation, it just wasn't bothered with as a selling point. In actual reality, intermods existed and even remarked on in Radiotron Designer's Handbook in pre-WW2 editions. There is NO vacuum tube that has perfectly linear plate characteristics, never was. Some tube structures were attempted to approach that but did not reach that lofty goal.

Do you wish elaboration on this or are you content with myths?

The heart of the Tayloe Mixer is a CMOS multiplexer-switch, a solid-state digital-driven, analog-range, multiple SPST-switch-equivalent. It is as free from intermodulation problems of any kind as seems possible today and its sensitivity is from ambient noise on up to switch breakdown voltage. There are NO equivalent tube circuits that can possibly out-perform it as to intermods.

>Which came three decades after Shockley's transistor.

Shockley didn't invent the transistor all by hisself...although he later claimed to do that. He got stuck with having to share a Nobel Prize with two others. Poor feller.

>> > Single slideband wuz PATENTED in 1923.

But for frequency-division multiplexing (FDM) of several voice
circuits on a single pair of wires. Landline.

>> Agreed, and well known doesn't mean well used.
>>
>> > > and some advanced hams had SSB rigs on the air back then.
>>
>> But not many.
>
>An early iteration of spread spectrum in ham radio.

Nonsense. Commercial SSB of the early 1930s and beyond on
HF simply put the FDM signal on a single RF carrier and
suppressed the RF carrier, transmitter-receiver link substituting
for the single wire pair. The common type was four 3 KHz voice
channels in a 12 KHz total bandwidth, no "spreading" of anything
but imagination due to lack of knowledge of the method. :-)

Do you call DSB AM a "spread spectrum iteration" because it
takes up twice the bandwidth necessary for communications?!?
Radio amateurs did DSB AM before they tried SSB AM... :-)

No doubt he's confused me with someone else. He can't get even the
most basic element of my amateur career right.

I think Dick is emotionally immature.

Dixie, that may be, but you're words still ring hollow. And you've no ability to defend your position, so the names start rolling out. Typical.

You're one of those "do as I say, not as I do" kind of people. You think its OK to be that way because you have an Extra Class Amateur Radio license, and think that that makes you smarter than everyone else.

Yet you cannot figure out how to join Hans on the air for a little CWing, because you're away from your fixed-base radio. Yep, CW is going to do you a lot of good in an emergency, and thusly, every one must learn it for Dick's sake.

>duplicate those ourselves, the result is today's 99% plug & play ham
>radio. Took awhile but in the end . .

The "transistor" was/is a whole series of inventions, not just the one mentioned above. From an amateur point of view, transistors became competitive with tubes in some applications in the 50s, while in other applications they have still not completely displaced tubes. Amateur requirements are often different than those of other services, so exact comparisons with, say, military or broadcast practice can be misleading. For example, preventive maintenace tube replacement cost in a 24/7 broadcast station can make a solidstate transmitter economically advantageous, while the ham who transmits a few hundred hours per year can run a tube transmitter until the bottles fail.

>

The main factor in ham gear was/is $ per watt of first-cost.

>

>Shockley's transistor.

Yup. Many early solidstate rxs were inferior in BDR and IMDDR to the tube sets they replaced. Doesn't just apply to ham gear, either. But over time the solidstate designs improved until they were almost as good in BDR amd IMDDR as tube designs of a few decades earlier. Smaller and less expensive, too.

>> People had more free time. Forty hour work weeks, paid vacations, etc.

I don't think people had more free time, 40 hour work weeks or paid vacations
in the 70s than they did in the '60s. The stagflation (combination of economic
stagnation and inflation at the same time) of the '70s ate into almost
everyone's real income. Energy crises quadrupled the price of gas and reduced
the resale value of big cars, homes, powerboats, etc. Many middle class
families needed two incomes to keep from sliding backwards economically.
>
>They also had more discretionary income. Some folks were undergoing
>economic stress, but not the entire country.

More discretionary income in the '70s than the '60s? I doubt it. Also, the
total economic picture in the '60s was far better than in the '70s.

>Additionally, the computer
>avalanche had not even begun as an alternative "techie" activity.

Agreed. But cb and freebanding were booming in the '70s. Quality solidstate home and auto sound systems were becoming much less expensive than their tube predecessors. And energy-efficiency was the technological frontier, not dowdy old radio.

Yet through all that, ham radio grew and thrived.

Lessee, now, what was it I did? Oh, just got out of my chair when FCC said it was time for Incentive Licensing and motored a two day trip to the district office to upgrade. And you? You wouldn't have had to leave town to do that,-with all the questions and their answers given to you on a platter in advance, but rather you chose to bitch and whine for half a lifetime because the licensing requirements didn't quite fit your personal view of "appropriate". Yer a real genius, pal!

> and think that that makes you smarter than everyone
> else.

Well, it would stretch things more than just a little to attempt to avoid besting you in that department, I'll have to admit.

>
> Yet you cannot figure out how to join Hans on the air for a little
> CWing, because you're away from your fixed-base radio.

So Hans issued a blanket invitation to all rrap'ers to QSO him on CW- NOT a personal invitation to me, as though that matters. I happened to be 800 miles from home with no way to put a rig on the air. As though the circumstances here warranted something special. You got your head screwed on sideways or has your current XYL got you biased beyond cutoff?

> Yep, CW is
> going to do you a lot of good in an emergency, and thusly, every one

Plain hardheaded stupidity, that's you. CW is not nor has it ever been anything more than it is - A mode that requires the operater to learn it to be able to use it. You're too much

an ignoramos to do either.]

We probably should be cheering that fact.

>To the person that corrects spelling. Let's leave that alone. Spelling and
>grammar should count in formal reports, but reasonable misspelling in an
>internet posting is okay.

I consider myself to be a person of average abilities, but seem to have little or no difficulty in achieving near perfect spelling and grammar while posting to internet newsgroups. For the record, so do you. I think part of the reason why we're losing our culture is because there are too many people willing to "let go" on the simple, but necessary, details of a civilized society -- such as showing respect for those who read your words.

>It is hard to maintain spelling in an internet
>posting and there should be some allowance. Sometimes typing quickly can
>cause
>incorrect spelling. Incorrect spelling or grammar does not mean the person is
>less intelligent. The content of the message is what's important.

To the contrary, I believe the content of the message gets lost when easily avoided distractions, such as incorrect spelling, punctuation and grammar cause interference in the mind of the reader.

You think the no code debate is a recent issue with ham radio?
Here is the guy that started it all.

Cotton Wood
Ranch,
Ten Sleep,
Wyo.

Gentilemen:
I have a Radiaphone with out KEY and I Want to use it on short
Distance Where there is no code or Ameture Stations and I Have no
use for The KEY and I do not Want to go to the Expense of Putting
a
KEY and Brushing up on Code and after I get it I will Have no use
For it in my Buisness and I can See no Reason to Compell me get
the
KEY and learn Code when there is no Code Stations in Ten Sleep or
Worland Wyoming but Plenty of Receivers that I can call up and
tell
Them What I Want So Please See if I cannot get a licens with out
the
Expense of the KEY and Brushing up on Code I have nt usd the Code
for
5 years and Canot Use it in Worland or Ten Sleep Wyo and it will
be
no good to me After I get it and I Donot See why I should get
Some-
thing that I do not need Please see what you can do my Distance of
Use is 25 miles.
U. S. Hubbell
QST for June, 1928

Hey Larry, in reference to spelling, grammar, and punctuation, how
is that for a long sentence?

I believe that incorrect spelling and grammar reflects directly on the poster's intelligence -- or, more to the point, the lack thereof.

>
>Very true. But when a person doesn't take the time to correct multiple

>it means they just don't care.
>
>73 de Jim, N2EY

Precisely. It also means they have no respect for their reader, and thus do
not
deserve the reader's attention. Proper spelling, punctuation, and grammar make the difference in whether or not the author is perceived as a boor, or as an educated and intelligent person, whose words should be taken seriously.

: But when a person doesn't take the time to correct multiple errors,
: it means they just don't care.
:

No, it simply means that they don't consider it important. (Which is
different than your anal-retentive/condescending "they just don't care")

Hansl:

Jim is an educated and intelligent person, who is qualified to make such
judgments as "people who disregard proper spelling and grammar
just don't care." What I find anal-retentive/condescending is your
criticism of someone who is trying to uphold the accepted language
standards once universally understood and followed by every high-
school graduate, but distressingly absent even from some of today's
university students.

You'd have to read back through the thread but I have been a participant in
the thread off and on.

I doubt if you can properly measure anything, given the way you
"anointed" kv4fz on 14313 over the years. Do you flame anyone
who does not support fz?

Lloyd

Seems like a likely bureaucratic result. Easier to just let it slide
and not piss people off. Besides, so what if someone they passed
could in reality only do 19 WPM? Not a hazard to the public....

What about the Jewish hams?.... ah, Jewish amateurs....
Do they have pork barrel politics in Israel?........ :-)
